395 *Comparison of Valuation Data, Operating Statistics, etc.*

Lincoln Gas & Electric Light Co., Lincoln, Neb.

396 Henry I. Lea, Consulting Gas Engineer, Peoples' Gas Building, Chicago.
Member American Gas Institute, American Society of Mechanical Engineers.

February 14th, 1914.

George Montgomery, Manager, Lincoln Gas & Electric Light Co., Lincoln, Neb.

DEAR SIR: Herewith you will please find a comparison of the data contained in the reports of Alton D. Adams, covering valuation, operating expenses, etc., of the gas department of your property with corresponding data from my report.

The valuation figures are as of January 1st, 1913.

Periods covered by operating statistics are shown in the several tabulations.

The figures of Mr. Assenmacher, where comparable, are also to be found.

You will remember that after may report had been compiled a few errors were discovered in the street main figures as shown by the inventory.

These corrections were made clear in the testimony of Mr. Brodnax, and in my figures herewith adjustment is made for these differences.

In my original report the real estate figures given by me were on property which I believed was exclusively used by the gas department, but I found later that portions of this property were used by the electric department.

You will, therefore, find in the accompanying figures a revision of my real estate valuations to agree with my testimony on this matter.

For purposes of valuation comparison, I have taken the Net Construction Costs as shown by Adams and have added his 7% in arriving at his Reproduction Costs.

To the Present Values as shown in Adams' report, I have added his 7% to parallel it with my Present Values.

This has also been done with the Depreciation Annuities shown by Adams.

397 Such other steps as were necessary in making the valuation figures shown by Adams strictly comparable with those of my report have been taken, and all figures shown have been checked and may be accepted as showing accurately the differences on points indicated.

In a number of cases I have taken the minor differences found in Adams' figures as being due to typographical errors, and have used the figures obviously meant to be shown.

I believe you will find the headings of the various tables fairly ex-

POOR C

planatory, but believe that if this comparison is submitted to the Court, it should be accompanied by a verbal explanation of the relation of each of the tables to the whole matter, as it seems almost impossible to do this fully with only the brief headings.

Respectfully submitted,

HENRY I. LEA.

H. I. L.—P.

534 In the District Court of the United States, District of Nebraska, Lincoln Division.

LINCOLN GAS & ELECTRIC LIGHT COMPANY, a Corporation, Plaintiff,

vs.

THE CITY OF LINCOLN et al., Defendants.

*Stipulation.*

It is hereby stipulated and agreed that the clerk of the court in the preparation of the printed record on appeal of this case shall omit therefrom Exhibits 223, 224, 225, 226, 227, 228 and 258, as found in this volume, for the reason that the matters contained in such exhibits are fully covered by the testimony of witnesses or other exhibits, or are deemed by the parties hereto immaterial under the issues on this appeal.

E. C. STRODE,
*Attorneys for Plaintiffs.*
ANDREW PETERSON,
W. M. MORNING,
*Attorneys for Defendants.*

535 This is one of seven volumes of evidence taken before me at the trial of the case of Lincoln Gas and Electric Light Company vs. City of Lincoln, et al., pending in the United States District Court, for the District of Nebraska, Lincoln Division. These volumes, together with the original printed record containing the evidence given on the first trial and certified to the Supreme Court of the United States, constitute the whole of the evidence submitted to me, and upon which my report heretofore filed in this case is based.

JOHN J. SULLIVAN,
*Special Master.*

536

*Certificate.*

I hereby certify that the statement of the evidence hereto attached, consisting of one volume, and the exhibits material to the issues, consisting of volumes 1, 2 and 3, in each of which a copy of this certificate is attached and likewise signed and allowed, and including certain testimony reproduced in the exact words of the witnesses, desired by the parties and ordered to be so set out by the court; the objections to the evidence and the rulings of the court thereon as set out herein, and including the stipulations of counsel, is a true, complete and properly prepared condensed statement of such evidence, stipulations, exhibits, and objections and rulings of the court thereon, properly prepared and submitted, and that the same is hereby signed, settled and allowed, and ordered made a part of the record in the

above entitled case under the provisions of Rule 75 of said court, as a true, complete and properly prepared condensed statement of all the evidence upon said trial.

Witness my hand this 12th day of August, 1916.

PAGE MORRIS, *Judge.*

537 *Valuation of Lincoln Gas Plant.*

As of Jan. 1, 1907.

*Extracts from Addyston Pipe & Steel Co. vs. United States,* 175 *U. S.,* 211; 20 *Supreme Court Reporter,* 96.

P. 97, S. C. Reporter.

"Statement by Mr. Justice Peckham:

The six defendants are the Addyson Pipe & Steel Company, of Cincinnati, Ohio; Dennis Long & Company, of Louisville,
591 Kentucky; the Howard-Harrison Iron Company, of Bessemer, Alabama; the Anniston Pipe & Foundry Company, of Anniston, Alabama; the South Pittsburg Pipe Works, of South Pittsburg, Tennessee; and the Chattanooga Foundry & Pipe Works, of Chattanooga, Tennessee; one company being in the state of Ohio, one in Kentucky, two in Alabama, and two in Tennessee.

The following are in substance the facts upon which the judgment of the circuit court of appeals rested, as stated in the records:

It was charged in the petition that on the 28th of December, 1894, the defendants entered into a combination and conspiracy among themselves, by which they agreed that there should be no competition between them in any of the states or territories mentioned in the agreement (comprising some thirty-six in all), in regard to the manufacture and sale of cast-iron pipe."

P. 98, S. C. Reporter.

"From the minutes of the association, a copy of which was put in evidence by the petitioner, it appeared that, prior to December 28, 1894, the Anniston Company, the Howard-Harrison Company, the Chattanooga Company, and the South Pittsburg Company had been associated as the Southern Associated Pipe Works. Upon that date the Addyston Company and Dennis Long & Co. were admitted to membership."

P. 99, S. C. Reporter.

"The contract was let to the Howard-Harrison Company, of Bessemer, at $24, who allowed the Shickle, Harrison & Howard Company, a pipe company of St. Louis not in the association, but having the same president as the Howard-Harrison Company, of Bessemer, to fill part of the order."

593 *Reinforced Concrete Reservoir—Proposal.*

The undersigned hereby propose to furnish labor and material, and complete all work in connection with the building of a reinforced concrete reservoir of 1,500,000 gallons capacity, at the Mockett Pumping Station, for the City of Lincoln, Nebraska, in accordance with the plans and specifications now on file in the office of the City Clerk, in Lincoln, for the following prices, to-wit:

For reservoir complete, including excavation and back filling ..... $13,361.00

Dollars.

For reservoir complete, according to specifications on file, and plans filed herewith..... Dollars.

I propose to use twisted bars for reinforcement. Method of waterproofing proposed Painting with neat cement immediately upon removal of forms.

The following schedule of quantities and prices is to be used in connection with my bid to determine the unit prices for any work more or less than called for by the plans, and for partial estimates according to the specifications.

| | Rate. | Total. |
|---|---|---|
| 8,620 cu. yds. of excavation | @30 cts. | $2,586.00 |
| 970 " " concrete | @ $8.50 | $8,245.00 |
| 85,500 Lbs. of reinforcing steel | @ $0.026 | $2,223.00 |
| 2 wrought iron ladders | @$10.00 | $20.00 |
| 2 iron manholes and covers | @$12.50 | $25.00 |
| 2 ventilators | @ $6.00 | $12.00 |
| Waterproofing | @ | $250.00 |
| | | $13,361.00 |

Total equal to price named in proposal $13,361.00.

If awarded this contract, I agree to complete said reservoir on or before Dec. 1st, 1912.

Enclosed is a certified check for $750.00, payable to George Dayton, City Treasurer, which is to be retained by the City of Lincoln, as liquidated damages in case I fail to enter into a contract with sufficient bond within ten days from the date of notification of awarding of contract.

Dated this 31 day of Aug., 1912.

(Signed) ABEL & ROBERTS.

Address, Lincoln, Nebr.

594 *Cost of Manhole Covers.*

The Standard Manhole Ring and Cover used by the City of Lincoln, has a weight of 375 pounds cast iron.

At the price of $8.00 each per the following bills these covers cost 2.13 cents per pound.

A part of the casting is ¾ inch thick and most of the remainder one inch thick.

603 *Contract Between the City of Lincoln and George E. Tobin, for the Construction of a Concrete Roof Over Certain Water Pipes at the City Water and Light Plant, at 29th & "A" Sts.*

This agreement made and entered into this 8th day of September, 1913, by and between the City of Lincoln and George E. Tobin.

Witnesseth: That said George E. Tobin by these presents agrees with the said City of Lincoln, under penalty of bond in the sum of $600.00, to construct a concrete roof over certain water pipes at the city water and light plant located at 29th & "A" streets in said city, according to the plans and specifications for same now on file with the City Clerk of said city, and a copy of which are hereto attached and made a part hereof. All of said work to be completed within 40 days from the date of the approval of this contract by the City Council.

In consideration for the completion of said work according to the plans and specifications and contract, the City of Lincoln agrees to pay said George E. Tobin the sum of $1,090; for any grading within the lines of structure, 50¢ per cubic yard; and for extra concrete $12.00 per cubic yard; for extra reinforcing steel 3¢ per lb., and for extra structural steel 4¢ per lb.

In witness whereof, the parties hereto have set their hands and seals the day and year last above written.

CITY OF LINCOLN,
By F. C. ZEHRUNG, *Mayor.*
GEO. E. TOBIN.

Attest:
[SEAL.] THEO. H. BERG,
*City Clerk.*

604 *Proposal.*

500,000 Reinforced Concrete Reservoir.

The undersigned hereby propose to furnish labor and material and complete all work in connection with the building of a reinforced concrete reservoir of 500,000 gallons capacity, at 17th and Van Dorn streets, for the City of Lincoln, Nebraska, in accordance with the plans and specifications now on file, in the office of the City Clerk, in Lincoln, for the following prices, to-wit:

For reservoir complete, according to plans and specifications, on file herewith $6,175 Dollars.

I propose to use steel to meet specification bars for reinforcement. Method of waterproofing proposed, Cement washing.

The following schedule of quantities and prices is to be used in connection with my bid to determine the unit prices for any work more or less than called for by the plans, and for partial estimates, in accordance with the specifications.

| | Rate. | Total. |
|---|---|---|
| 2,300 Cu. Yds. of excavation | @30¢ | $690.00 |
| 383 " " " concrete | @ $10.00 | $3,830 |
| 47,000 lbs. of reinforcing steel | @3¢ | $1,410 |
| 2 wrought iron ladders | @ $10.00 | $20 |
| 2 iron manholes and covers | @ $12.50 | $25 |
| 2 ventilators | @ $12.50 | $25 |
| Waterproofing | @$175.00 | $175 |
| | | 6,175 |

Total equal to price named in proposal..... $6,175.00

If awarded this contract, I agree to complete said reservoir on or before Dec. 15, 1913.

Enclosed is a certified check for $500 payable to George Dayton, City Treasurer, which is to be retained by the City of Lincoln, as liquidated damages in case I fail to enter into a contract with sufficient bond within ten days from the date of notification of awarding of contract.

Circuit Court of the United States, Southern District of New York.

THE CONSOLIDATED GAS COMPANY OF NEW YORK, Complainant,

against

JULIUS M. MAYER, as Attorney-General of the State of New York, Defendant.

(Copy.)

*Master's Report.*

Filed June 24th, 1907.

Good Will.

In the present case, the Complainant claims that there should be included among its assets not only its franchises but also its good-will. It is alleged in the bill that,

"In addition to its said franchise rights, your orator is possessed of a large amount of intangible property, which constitutes an integral and important part of said business. Such property consists of the value of the connections between the pipes and mains, of your orator and the various buildings throughout the City of New York, the value of various contracts owned by your orator in connection with its business, the value of the organization of your orator's business and good-will, and various other elements of value which have been created and developed by your orator and its predecessors through intelligent and efficient business management during the past three-quarters of a century and fidelity to their engagements, all of which possess the full attributes of property and materially add to the gross earnings of your orator, upon which it pays an annual tax of one per cent. to the State of New York. By reason of such good-will it would be difficult, if not impossible, for any company in the City of New York, even if vested with similar franchises to those possessed by your orator, to compete in selling gas to consum-

851 ers in the said city; and if your orator elected to sell its tangible property and franchises, it could, apart from these, obtain a large sum for the said good-will, and your orator avers that upon this good-will, as an element of substantial value, it is entitled to a reasonable return, and that, in fixing the price, at which your orator should sell its gas, as hereinbefore stated, the said Commission of Gas and Electricity allowed no return whatever upon the value of the said good-will but wholly eliminated it as an item of substantial value."

In the present case Complainant claims as the value of its good-will the sum of $7,500,000., and in support thereof relies on the opinions of two witnesses, Dr. Humphreys and Mr. Addicks. The Defendants offered no evidence on the subject.

EXHIBIT 412.

Dr. Humphrey's testimony is as follows:

"Q. Assuming, Doctor, that in 1884, six gas light corporations operating in the City of New York were consolidated, forming the complainant company, the Consolidated Gas Company; that one of the constituent companies was incorporated in 1823 and was in operation from 1825 to 1884; and that the other five were incorporated at intervals prior to the consolidation in 1884; that the output of the six companies in gas in 1885 was about 3,942,000,000 feet, and that the output has increased until in 1905 it was 13,283,000,000 feet or thereabouts; that the population of Manhattan Island, on which the Consolidated Gas Company is operating, is over 2,100,000 people; that it shows an increase of something like 50% in population in the last thirty-years or so; that the Consolidated Gas Company has about 390,000 consumers, and is in active operation today, what would you consider to be the value of the good-will of that business, including the value of the established business and its connections with the consumers, and other elements which go to make up good-will as distinguished from its tangible plant?

A. I should estimate it at not less than $7,500,000."

The basis of Mr. Addick's testimony appears more clearly. He said that in his experience where consumers have connections and established relations with a gas company, it requires some
852 special incentive to compel them to change. Such incentive, he said, would be a reduction in rate by a competing company to the minimum extent of 10 per cent. of the selling price of gas. Taking the Complainant's sales for 1905, 13,283,000,000 feet, such percentage would aggregate $1,328,300. This capitalized at, say 7 per cent. would amount to $18,875,000. or at 8 per cent., to $16,-603,750., as the value of the good-will.

879 *Certificate.*

I hereby certify that the statement of the evidence hereto attached, consisting of one volume, and the exhibits material to the issues, consisting of volumes 1, 2 and 3, in each of which a copy of this certificate is attached and likewise signed and allowed, and including certain testimony reproduced in the exact words of the witnesses, desired by the parties and ordered to be so set out by the court; the objections to the evidence and the rulings of the court thereon as set out herein, and including the stipulations of counsel, is a true, complete and properly prepared condensed statement of such evidence, stipulations, exhibits, and objections and rulings of the court thereon, properly prepared and submitted, and that the same is hereby signed, settled and allowed, and ordered made a part of the record in the above entitled case under the provisions of Rule 75 of said court, as a true, complete and properly prepared condensed statement of all the evidence upon said trial.

Witness my hand this 12th day of August, 1916.

ROGER MORRIS, *Judge.*

880 This is one of seven volumes of evidence taken before me at the trial of the case of Lincoln Gas and Electric Light Company vs. City of Lincoln, et al., pending in the United States District Court, for the District of Nebraska, Lincoln Division. These volumes, together with the original printed record containing the evidence given on the first trial and certified to the Supreme Court of the United States, constitute the whole of the evidence submitted to me, and upon which my report heretofore filed in this case is based.

JOHN J. SULLIVAN,
*Special Master.*

881 In the District Court of the United States, District of Nebraska, Lincoln Division.

LINCOLN GAS & ELECTRIC LIGHT COMPANY, a Corporation, Plaintiff,

vs.

THE CITY OF LINCOLN et al., Defendants.

*Stipulation.*

It is hereby stipulated and agreed that the clerk of the Court in the preparation of the printed record on appeal of this case shall omit th-refrom exhibits 9, 10, 11, 16, 19, 20, 21, 22, 66, 83, 84, 85, 102, 113 to 132 inclusive, 135 to 143 inclusive, 150, 226, 265, to 269 inclusive, 382, 383, and 442, as found in this volume, for the reason that the matters contained in such exhibits are fully covered by the testimony of witnesses or other exhibits, or are deemed by the parties hereto immaterial under the issues on this appeal.

E. C. STRODE,
*Attorneys for Plaintiff.*
C. ROBERT PETERSON,
W. M. MORNING,
*Attorneys for Defendants.*

882 In the United States District Court, District of Nebraska, Lincoln Division.

THE LINCOLN GAS & ELECTRIC LIGHT COMPANY, Plaintiff,

vs.

THE CITY OF LINCOLN, Defendant.

I hereby certify that Volume 1, of exhibits are the original exhibits identified and offered on the hearing of the above entitled case, in connection with Henry I. Lea's testimony.

I further certify that Volume 2, of exhibits are the original exhibits identified and offered on the hearing of the above entitled case, in connection with Alton D. Adams' testimony.

I further certify that Volume 3, of exhibits contains the balance of the original miscellaneous exhibits identified and offered on the hearing of the above entitled case (unless otherwise specified where copies have been substituted by agreement of parties).

I further certify that exhibit #102-134-135-136-137-138-139-140-154 are missing from this Volume 3, but are to be supplied by the plaintiff, the same not having been done at this date.

In testimony whereof I have hereunto set my hand at Lincoln, Nebraska, this 19th day of June, A. D. 1914.

MINOR S. BACON,
*Official Reporter.*

The 2″ main is standard wrought iron black pipe. All other pipe is standard weight cast iron gas pipe.

The above does not include extensions to University Place and Havelock.

887 Buildings.

Coal Gas Retort House is 33′ wide by 70′ long and 37′ high. It is a brick building, the walls being 12″ thick. The roof is of corrugated iron. This building was erected in 1889 or 1890.

The old water gas house is 32′ by 48′ and 37′ high. It is a brick building with iron roof. The walls are 12″ thick. This building was erected about 1889 or 1890.

The coal and coke shed is a frame building 110′ long and 23′ 6″

wide. The floor of this shed being on the same level with the charging floor of the retort house. It was built about the year 1890.

The condenser room, exhauster room, purifying house and meter rooms and laboratory is a brick building 177′ long by 36′ wide and 30′ high, the walls being 12″ thick. Erected in the year 1890 or 1891.

The oil house is a brick building 35′ by 23′ 6″ and 10′ high.

Street main governor house and booster house is a brick building, 16′ 9″ by 23′ 3″ built in 1907.

Old street main governor house is 12′ by 20′ by 10′ high. Built in 1891.

The new water gas house is 48′ by 32′. It is a brick building with 12″ walls. Built in 1908.

The blower house is 25′ long and 15′ wide. It is also a brick building with 12″ walls. Built in 1908.

The meter shop is a brick building 40′ by 24′ with 12″ walls. Built in 1911.

888 Gas Holders.

50,000 cubic foot holder built by the Stacy Mfg. Company in 1881.

200,000 cubic foot holder built about the year 1890.

500,000 cubic foot holder built by Western Gas Construction Company in 1908.

100,000 cubic foot holder known as the district holder situated at the corner of 32nd and X Streets, built by the Western Gas Construction Company in 1910.

889 EXHIBIT 3.

*Inventory of Water Gas Sets No. 1 & 2.*

One 6′ 6″ Western Gas & Construction water gas set—
- 5 shells.
- 1 seal pot.
- 1 Wort. down run valve.

One 7′ 6″ Springer water gas set—
- 4 shells.
- 1 seal pot.

One Western Gas & Construction Co. oil heater.

One pressure board.

One oil strianer.

Two steel coke buggies.

One chain blocks for raising coke buckets.

One No. 7 B. F. Sturtevant fan blower with 16″ delivery pipe belted to—

One 40 H. P. 500 Volt D. C. motor—975 R. P. M.

Inventory Gas Line from Water Gas Set to Relief Holder.

One 16″ W. G. & C. Co. C. I. valve.
125′ 16″ C. I. pipe.
One 16″x16″x16″ C. I. tee.
Two 16″ drip pots.
Two 16″x12″ reducing nipples 10′ long.
Two 12″x10″ C.I. " " 10′ "
Two 12″ C. I. ells.
One 50,000 cu. ft. relief holder with masonry tank.

895 LINCOLN, NEBRASKA, Dec. 24, 1912.

Mr. B. C. Adams, Vice Pres. & Gen. Mgr., Office.

DEAR SIR: In compliance with your request I wish to respectfully submit for your approval the following figures taken from our Gas Manufacturing report for the year 1911:

| | |
|---|---|
| Gross Earnings ..... | $274,292.95 |
| Operating Expenses ..... | 214,385.05 |
| Net Earnings ..... | 59,907.90 |

The above gross earnings include the sales of Havelock and University Place, based on $1.25 per thousand cubic feet as well as the total sales of Lincoln at $1.20 per thousand. The operating expenses include items for depreciation and the occupation tax.

Very respectfully,

R. E. PHILLIPS,
*Sec'y & Treas.*

958 *General Information.*

Excavation:

Based on side slope of 30 degrees from vertical.

Brick Work:

Size of Brick in Generator House, Meter Shop and Oil Tank House 2¼" x 4" x 8".
In Purifier House, Retort House, Coal Shed and Booster House at Storage Plant 2½" x 4" x 8½".
Size of Hollow Tile in Generator House 5" x 7" x 12" (Superficial Area—5" x 12").

Steel Work:

10% added to standard weights for Gussets and Rivets.

Corrugated Iron:

15% added to superficial area for lappage.

Forms for Concrete:

30% added to superficial area for braces etc.

Remaining Quantities:

No per centage added.

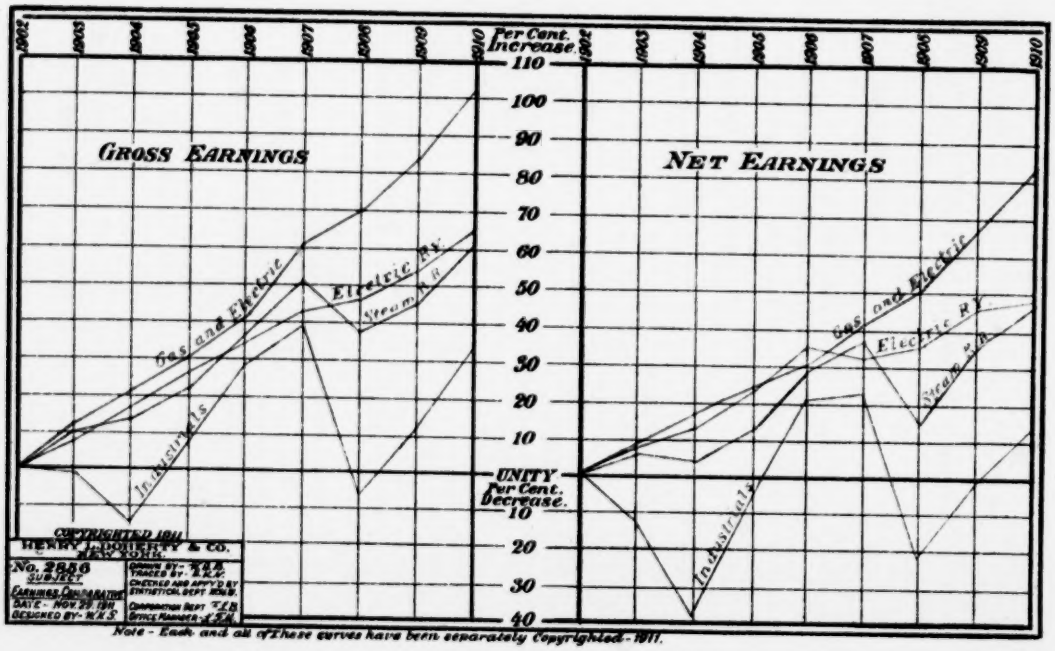
HENRY L. DOHERTY & COMPANY
BANKERS
SIXTY WALL STREET
NEW YORK



Note - Each and all of these curves have been separately Copyrighted - 1911.

These tables show the relative increases and decreases of the gross and of the net earnings of steam railroads, of electric railways, of gas and electric companies, and of "industrials" for each of the nine years from 1902 to 1910.

We obtained the gross and net earnings of all the steam railroads of the United States, of all "industrials" listed on the New York Stock Exchange which could be traced back to 1902 and whose aggregate gross for that year amounted to about $1,250,000,000.00; we obtained the gross and net earnings of the electric railways in most of the larger cities of the country and similar gas and electric light figures, using all amounts available without selection, but exclusive of New York City.

All of these great barometer sets of figures we standardized at Unity for 1902 and calculated the percentage of their subsequent increases and decreases based on 1902.

The resulting curves shown above prove that the gross and net earnings from the gas and electric business increased the most rapidly and that they are practically unaffected in their rate of increase even by such panic conditions as those of 1907 and 1908.

December 20th. 1911.

Dividends.

Dividends are paid monthly at the rate of 6% per annum on preperred stock and 4% per annum on common stock.

Cities Service Company has paid dividends continuously since its

organization at the rate of 6% per annum on its preferred stock. On the common stock dividends were paid at the rate of 3% per annum up to January 1st, 1912, since which time the common stock dividend rate has been 4%. In addition to paying these dividends the Company has accumulated a surplus since its organization of $465,-354.56.

It is the plan of the Company to increase the dividends on the Common Stock one per cent each year, until six per cent is reached.

Thereafter the increased dividends will probably be paid in Common Stock.

980 Cities Service Company.

Is a holding company for the stocks of Gas and Electric properties operated and managed by the Doherty Organization and now controls through stock ownership the following properties:

The Denver Gas and Electric Light Company Denver, Colorado.

Spokane Gas and Fuel Company Spokane, Washington.

The Empire District Electric Company Joplin, Missouri and adjacent territory including neighboring cities in Missouri and Kansas.

The Brush Electric Company Galveston, Texas.

The total population served by the above companies is over 500,000.

Gas and electric properties have many strong points in their favor, tending to establish stability of earning power and safety of their securities.

Their business is the selling of a public necessity.

In good times or bad times their product is in demand. Luxuries may be foregone in times of financial stress, travel may be curtailed, and in many ways the public's expenses may be reduced, but light and heat are a necessity of every day life and are among the last things to be affected by general conditions in business.

In the present day of continual development of new adaptations and uses for gas and electricity, as well as the steady increase in the population of our American cities, there are many opportunities for expansion and growth in the business of well managed and aggressive Gas and Electric Companies.

The efficiency, cleanliness and economy of electrical power is continually becoming more apparent to large manufacturers throughout the world, and as a result, electricity furnished from large central stations is rapidly displacing individual steam plants for the production of power of practically all manufacturing purposes and offers opportunity for large increases in earning power of the companies.

Statistics show a gradual but steady increase in earnings of such properties much in excess of the rate of increase in earnings of other industries.

The safety and stability of the business when competently managed is thoroughly established by statistical records.

The properties managed and operated by the Doherty Organization have shown consistent increases and growth and the constant endeavor on the part of the management to obtain the good will and cooperation of the public by rendering the highest type of service, at

the least cost possible, has obtained for each company the hearty support of its consumers.

981 Properties Owned.

The Denver Gas and Electric Light Company, known to gas and electric men everywhere as one of the model plants in the United States is the only Company in the City of Denver, furnishing gas and electricity for light, power and heat—also steam for heating purposes.

Denver is known as the "City of Lights" because of the brilliancy of its municipal street lighting and the lavish electric sign display of its enterprising citizens.

While the population of Denver has grown from 133,859 in 1900, to 213,381 in 1910—a gain of 59%—the gross revenue of the Denver Gas and Electric Light Company has increased more than 400% during the same period.

Spokane Gas and Fuel Company supplies Gas for lighting and for domestic and industrial fuel purposes in the rapidly growing City of Spokane, Washington, whose population increased from 36,000 in 1900, to 104,000 in 1910. In the three years of the Doherty management of this property the gross earnings have been increased more than 50%.

The Empire District Electric Company serves a population of more than 100,000 in the greatest lead and zinc mining district in the world, embracing the cities of Joplin, Carthage, Webb City, and Carterville, Missouri—Galena and Columbus, Kansas. The power demand in this district exceeds 150,000 horse power, mostly in the mines, which number more than 700 and which are gradually substituting electric power for the small steam or gas engine plants previously operated.

For sixty years these mines have been steadily worked and the volume of business has increased from year to year; yet only a very small fraction of the ore bodies has been mined.

The field is recognized as a permanent one and the mining business in this district is now on a practical, substantial and solid basis as a manufacturing industry.

The earnings of the Empire District Electric Company are growing rapidly and will continue to increase even more rapidly in the future.

The Brush Electric Company supplies electricity for light and power in the City of Galveston, Texas, which has a population of approximately 40,000 people and is growing very rapidly. Galveston is the second city in the United States in the value of its export trade and its position will be even more important when the Panama Canal is opened. Millions of dollars have been spent for the improvement and protection of the city by the construction of a great sea wall, a large part of this work having been done by and under the supervision of the United States Government. This is an indication of the importance of Galveston as a port.

The earnings of this property have shown continual increases and should continue to do so, even more rapidly than in the past, because

of the rapid growth of the community and the introduction of the Doherty business getting methods.

981½ Cities Service Company having a large amount of treasury stock, will from time to time, add other desirable properties to its holdings.

It will be the policy of the Company, as other properties are acquired and new stock is issued for their purchase, to offer the new stock, first to stockholders, and if not all subscribed by them to offer the balance to the public at a less attractive price—the intention being to give the stockholders this advantage over other investors.

The Directors of Cities Service Company are:
Dennis Sullivan, Denver, Col.
Wm. F. Hoffman, Columbus, O.
Henry L. Doherty New York.
William B. Joyce, New York.
Frank W. Frueauff, Denver, Col.
Edward W. Rollins, Boston.
Holton H. Scott, New York.
Leslie M. Shaw, Philadelphia.
Charles T. Brown, New York,
Warren W. Foster, New York.
Burton G. Tremaine, Cleveland, O.
Howard E. Mitchell, Philadelphia.
Chas. A. Frueauff, New York.
Jas. M. Satterfield, Dover, Del.
Carle B. Gilbert, New York.

We recommend the Preferred stock of Cities Service Company as a very desirable, safe and conservative investment. At prsent market price it yields a return of more than 6½% and the unique method of payment of dividends, one half of one per cent monthly, by check, has proved very attractive and satisfactory to present stockholders.

The stock has a wide market and is listed on the Stock Exchange in Cincinnati, Cleveland, Columbus, Detroit, Indianapolis, Louisville, Minneapolis, St. Louis, and Toledo.

Many Bankers and Brokers in New York, Chicago, Philadelphia, St. Paul, Minneapolis, Boston, Providence, New Haven, Buffalo, Grand Rapids, Denver, and other cities are familiar with the Company's affairs and the stocks are bought and sold freely in these markets. A large amount of this stock has also been sold in England and it is listed on the London Stock Exchange.

PLAINTIFF'S EXHIBIT 23.

EXHIBIT "A."

*Modified Order.*

Now on this 12th day of July, 1911, this matter came on to be heard upon the petition of Lincoln Gas & Electric Light Company for modification of an order entered by the Nebraska State Railway Commission July 13th, 1911, authorizing it to issue and sell $500,000.00 face value of its 6 per cent three-year notes at not less than 96, and to issue $750,000.00 preferred stock, and other relief as in said order mentioned.

It appears from the petition and the evidence that the applicant has outstanding $2,250.00 common stock, $333,000. 6 per cent bonds of the original Lincoln Gas Company, which become due and payable September 1, 1911, and $1,500,000.00 of 5 per cent first consolidated mortgage bonds of the Lincoln Gas & Electric Light Company due and payable in 1914, of which amount $796,600.00 are outstanding in the hands of the public, $333,000.00 are held by the trustee of said mortgage bonds to take up and provide for the payment and cancellation of the said $333,000.00 of Lincoln Gas Company bonds, and $370,400.00 are pledged as collateral to company's obligations; that there was outstanding as of May 1, 1911, $121,500.00 of bills payable; that the market for long time bonds carrying a low rate of interest is unfavorable; that the applicant has made arrangements whereby it can place its 6 per cent three-year notes in the amount of $500,000.00 at a price of not less than 96; that it proposes to amend its articles of incorporation so that the authorized issue of the capital of the corporation shall be $2,250,000.00 divided into 22,500 shares of the par value of $100.00 each, of which
1022 amount $1,500,000.00 shall be common stock and $750,000.00 shall be cumulative preferred stock, preferred both as to assets and dividends, at the rate of not to exceed 8 per cent per annum; that in the event said amendment shall be authorized in the manner provided by law, the said Lincoln Gas & Electric Light Company proposes to offer to its stockholders $250,000.00 par value of said cumulative preferred stock for, and in exchange for $750,000.00 par value of its present outstanding common stock, such offer to be made to each of the present stockholders of Lincoln Gas & Electric Light Company, ratably in proportion to their holdings, and the event that any stockholder shall not desire to avail himself of such privilege of exchange, other stockholders have the right to take up such undesired amount; that upon receipt of said amount of common stock the said amount will be cancelled and such preferred stock issued in lieu thereof, the remainder of such preferred stock, to-wit: $500,000.00 par value, to be sold from time to time as may be required and ordered by the directors of the company, for the purpose of raising

funds for the payment of said $500,000.00 three-year 6 per cent notes above authorized.

The Commission therefore, being duly advised in the premises, and upon consideration thereof, does hereby state that in its opinion the use of the capital to be secured by the issuance and sale of the said notes and the issuance, exchange and sale of the said preferred stock, is reasonably required for the discharge or lawful refunding of said bonds of Lincoln Gas Company, due September 1, 1911, and of bills payable, and for the acquisition of property and the improvement of the company's facilities.

*Order.*

It is therefore ordered by the Nebraska State Railway Com-
1023 mission that the said Lincoln Gas & Electric Light Company be and it is hereby empowered, through its directors, to issue not to exceed five hundred thousand dollars ($500,000.00) face value of three (3) year notes, to draw interest at not to exceed the rate of six (6) per cent per annum and to be secured by the deposit, under a suitable trust agreement, with a suitable trustee, of three hundred thirty-three thousand dollars ($333,000.00) face value of bonds of Lincoln Gas Company, secured by an indenture between said Lincoln Gas Company and the Farmers Loan & Trust Company, dated August 10, 1891 (time of payment of said bonds to be duly extended), provided that upon the surrender of said three hundred thirty-three thousand dollars ($333,000.00) of Lincoln Gas Company bonds to The Trust Company of America the same shall be cancelled as provided by the mortgage; said five hundred thousand dollars ($500,000.00) of three (3) year six (6) per cent notes to be further secured by the deposit, under a suitable trust agreement, with a suitable trustee, of four hundred thousand dollars ($400,000.00) face value of the first consolidated mortgage bonds of the Lincoln Gas & Electric Light Company, secured by an indenture between said Lincoln Gas & Electric Light Company and The Trust Company of America, dated December 1, 1901, and due December, 1941; provided, that said five hundred thousand dollars ($500,000.00) of three (3) year six (6) per cent notes shall be sold for not less than ninety-six (96) cents on the dollar of face value, and the proceeds therefrom used for the purchase of Lincoln Gas Company bonds due September 1, 1911, and the liquidation of bills payable, the acquisition of property
and the improvement of the Company's facilities; and it is
1024 further, provided, that arrangements for the liquidation *fo* said notes by the issuance of five hundred thousand dollars ($500,000.00) cumulative preferred stock, which is hereby authorized by the Nebraska State Railway Commission, may be carried out, and the directors may cause to be called a meeting of stockholders of the company upon thirty (30) days' notice to each stockholder of record, and in the event of favorable action by said stockholders, as by law provided, that the same shall be considered as duly approved on behalf of said Lincoln Gas & Electric Light Company; provided

further, that said five hundred thousand dollars ($500,000.00) of cumulative preferred stock shall be sold for not less than ninety-six (96) cents cash per one dollar ($1.00) of face value, and the proceeds therefrom, as received, used for the payment of three (3) year six (6) per cent notes hereby authorized; provided further, that an amortization fund shall be created out of earnings, or out of any accumulated surplus, from which capital account is to — reimbursed, within three (3) years of date of issue of said cumulative preferred stock, for any discount allowed thereon.

It is further ordered that said applicant be, and the same hereby is, authorized to issue two hundred fifty thousand dollars ($250,000.00) of its cumulative preferred stock, in addition to the five hundred thousand dollars ($500,000.00) above authorized, in exchange for seven hundred fifty thousand dollars ($750,000.00) of common stock now outstanding, which said common stock shall be thereupon cancelled, conditioned, however, upon the amending of the articles of incorporation as aforesaid, at a meeting duly called and held of the stock-holders of said applicant company.

1025 It is further ordered that said Lincoln Gas & Electric Light Company be, and the same hereby is, required to file with the Commission verified statements showing the proceeds derived from the sale of said notes, and the purposes in detail to which such proceeds have been applied, said statements to be filed within thirty (30) days of the time when the unreported amount received or expended exceeds the sum of one hundred thousand dollars ($100,000.00).

It is further ordered that the said Lincoln Gas & Electric Light Company be, and the same hereby is, required to file with the Commission five hundred thousand dollars ($500,000.00) cumulative preferred stock and the purposes in detail to which such proceeds have been applied, said statements to be filed within thirty (30) days of the time when the unreported amount received or expended exceeds the sum of one hundred thousand dollars ($100,000.00).

It is further ordered that the said Lincoln Gas & Electric Light Company be, and the same hereby is, required to file with the Commission verified statements showing the details of the exchange of two hundred fifty thousand dollars ($250,000.00) cumulative preferred stock for seven hundred fifty thousand dollars ($750,000.00) common stock, said statements to be filed within thirty (30) days of the time when said exchange shall have been completed.

Made and entered at Lincoln, Nebraska this 12 day of July, 1911.

NEBRASKA STATE RAILWAY COMMISSION.
H. J. WINNETT, *Chairman.*

Attest:

[SEAL.] CLARK PERKINS, *Secretary.*

1026 *Ordinance No. 732.*

An ordinance providing for the levy and collection of an occupation tax upon the business of furnishing electric current and gas for lighting and other purposes and to repeal chapters 64 and 66 of the Consolidated Ordinances of 1908.

Be it ordained by the Mayor and Council of the City of Lincoln, Nebraska:

Section 1. Every person or corporation engaged in the business of selling electricity or gas in the city of Lincoln, Nebraska, is hereby assessed and required to pay as an occupation tax a sum and amount equal to three (3) per cent of the gross receipts arising from such business.

Section 2. Such payment shall be made on the 15th day of each month and be based and computed upon the gross receipts of such business for the preceding month and all payments shall draw interest at the rate of one per cent per month from and after the same becomes due and after payment has been in default for six months a penalty of five per cent shall be added thereto in addition to said interest.

Section 3. Such corporation shall on the 15th day of each month file with the City Clerk a full, complete and detailed statement of the income and gross receipts of said business for the preceeding month duly verified and sworn to by the person in charge of such business, and the city of Lincoln shall have right at any and all times during business hours through its proper officers or representatives to inspect books and records of any such corporation for the purpose of verifying such report.

Section 4. In case such corporation shall fail to make payment of said occupation tax, interest and penalties as herein provided, the City Treasurer is hereby authorized to issue a distress warrant for the collection thereof and the officer to whom the same is delivered shall collect the amount of such tax by levy upon and sale of the personal property of the person or corporation owing the same in like manner as provided by statute for the levy and sale under distress warrant issued for the collection of personal property tax. The city of Lincoln may also sue such corporation in any court of competent jurisdiction for the amount of said occupation tax and may recover therein a judgment against such corporation for the amount so due with interest and penalties and may have execution thereon.

Section 5. Said occupation tax shall be paid to the city Treasurer and he shall deliver his receipt therefor and the amount paid shall be credited to the general fund of said city.

Section 6. Chapters Sixty-four and Sixty-six of the General Revised and Consolidated Ordinances of the City of Lincoln of 1908 providing for the levy of an occupation tax upon the electric light and gas companies of such city are hereby repealed. Provided however, that such repeal, and enactment of this ordinance shall in no-

wise affect the liability for the payment of any occupaton
1027 tax, interest and penalty levied under the provisions of such ordinance so repealed and shall not in anywise affect the right of the city of Lincoln to commence or prosecute any actions or proceedings for the collection of any such tax.

Section 7. This ordinance shall take effect and be in force from and after its passage, approval and publication according to law.

O. K.

L. A. FLANSBURG,
*Deputy City Att'y.*

Passed Dec. 13, 1909.

Approved Dec. 16, 1909.

D. L. LOVE, *Mayor.*

Attest:

R. C. OZMAN,
*City Clerk.*

1028 STATE OF NEBRASKA,
*Lancaster County, ss:*

I, Theo. H. Berg, City Clerk of the City of Lincoln, County and State aforesaid, do hereby certify that the attached is a true and correct copy of Ordinance No. 732, which was passed by the City Council December 13, 1909, with reference to levy and collection of 3% occupation tax on gas and electric light business, as shown by the records and files of my office in said city.

In witness whereof I have hereunto set my hand officially and affixed the seal of said city, this 13th day of June, 1914.

[Seal City of Lincoln, Lancaster County, Nebraska.]

THEO. H. BERG,
*City Clerk.*

1029 EXHIBIT 25.

Occupation Tax Ordinance #732.

(Here follow fac-simile gas reports for years 1908, 1909, 1910, 1911, 1912, marked pages 1030-1142.)

Lincoln Gas & Electric Light Co.

Manufacturing and Expense Reports

OF

# GAS DEPARTMENT

FOR 12 months ENDING December 1908.

EXHIBIT 26

# General Rules for Reporting

1. The Company's name should be stamped on report covers, and on the first page, and the name of the City or Plant at the head of every other page in the report.

2. Date of reports should be stamped at the top of every page.

3. Decreases should be in red.

4. Never use copying ink.

5. Special or unusual entries, corrections of back errors, changes in cumulative figures, discrepancies between annual and monthly reports, should invariably be explained.

6. Carry per unit costs four decimal places.

7. Items which do not apply to your Company's business, and cannot be filled in, should be checked, excepting large sections such as lines 1200-22, which should be ruled out.

8. Zeros should be filled in; don't leave blank lines.

9. Where statistical information asked for is not given, state reasons for omitting.

10. Figure "per meter" data on meters at close of month, less company and sub-meters.

11. Figure "per consumer" data on consumers at close of month.

12. Show residuals, lines 1004 to 1007, **"per ton of coal carbonized."**

13. Line 1425 should show the sum total of lines 905 and 906 on previous month's report, plus line 907 on current month's report.

14. Each copy of the report sent to the New York Office should be signed by the Secretary, Department Superintendent and by the General Manager or Acting General Manager.

15. The Manager or Acting Manager should inclose with every report to the New York Office a letter in duplicate reviewing the report and calling attention to all items of interest or of marked change.

Manufacturing and Expense Reports

OF

# GAS DEPARTMENT

FOR 12 MONTHS ENDING DECEMBER 31 1909

# General Rules for Reporting

1. The Company's name should be stamped on report covers, and on the first page, and the name of the City or Plant at the head of every other page in the report.

2. Date of reports should be stamped at the top of every page.

3. Decreases should be in red.

4. Never use copying ink.

5. Special or unusual entries, corrections of back errors, changes in cumulative figures, discrepancies between annual and monthly reports, should invariably be explained.

6. Carry per unit costs four decimal places.

7. Items which do not apply to your Company's business, and cannot be filled in, should be checked, excepting large sections such as lines 1200-22, which should be ruled out.

8. Zeros should be filled in; don't leave blank lines.

9. Where statistical information asked for is not given, state reasons for omitting.

10. Figure "per meter" data on meters at close of month, less company and sub-meters.

11. Figure "per commmer" data on consumers at close of month.

12. Show residuals, lines 1004 to 1007, **"per ton of coal carbonized."**

13. Line 1425 should show the sum total of lines 905 and 906 on previous month's report, plus line 907 on current month's report.

14. Each copy of the report sent to the New York Office should be signed by the Secretary, Department Superintendent and by the General Manager or Acting General Manager.

15. The Manager or Acting Manager should inclose with every report to the New York Office a letter in duplicate reviewing the report and calling attention to all items of interest or of marked change.

REPORT FOR Year Ending December 31 1909

Lincoln Gas & Electric Light Co.

**Manufacturing and Expense Reports**

OF

# GAS DEPARTMENT

FOR 12 MONTHS ENDING DEC 31 1910

# General Rules for Reporting

1. The Company's name should be stamped on report covers, and on the first page, and the name of the City or Plant at the head of every other page in the report.

2. Date of reports should be stamped at the top of every page.

3. Decreases should be in red.

4. Never use copying ink.

5. Special or unusual entries, corrections of back errors, changes in cumulative figures, discrepancies between annual and monthly reports, should invariably be explained.

6. Carry per unit costs four decimal places.

7. Items which do not apply to your Company's business, and cannot be filled in, should be checked, excepting large sections such as lines 1200-22, which should be ruled out.

8. Zeros should be filled in: don't leave blank lines.

9. Where statistical information asked for is not given, state reasons for omitting.

10. Figure "per meter" data on meters at close of month, less company and sub-meters.

11. Figure "per consumer" data on consumers at close of month.

12. Show residuals, lines 1004 to 1007, **"per ton of coal carbonized."**

13. Line 1425 should show the sum total of lines 905 and 906 on previous month's report, plus line 907 on current month's report.

14. Each copy of the report sent to the New York Office should be signed by the Secretary, Department Superintendent and by the General Manager or Acting General Manager.

15. The Manager or Acting Manager should inclose with every report to the New York Office a letter in duplicate reviewing the report and calling attention to all items of interest or of marked change.

Lincoln Gas & Electric Light Co.

Manufacturing and Expense Reports

OF

# GAS DEPARTMENT

FOR 12 Months ENDING December 1911

# General Rules for Reporting

1. The Company's name should be stamped on report covers, and on the first page, and the name of the City or Plant at the head of every other page in the report.
2. Date of reports should be stamped at the top of every page.
3. Decreases should be in red.
4. Never use copying ink.
5. Special or unusual entries, corrections of back errors, changes in cumulative figures, discrepancies between annual and monthly reports, should invariably be explained.
6. Carry per unit costs four decimal places.
7. Items which do not apply to your Company's business, and cannot be filled in, should be checked, excepting large sections such as lines 1200-22, which should be ruled out.
8. Zeros should be filled in: don't leave blank lines.
9. Where statistical information asked for is not given, state reasons for omitting.
10. Figure "per meter" data on meters at close of month, less company and sub-meters.
11. Figure "per consumer" data on consumers at close of month.
12. Show residuals, lines 1004 to 1007, **"per ton of coal carbonized."**
13. Line 1425 should show the sum total of lines 905 and 906 on previous month's report, plus line 907 on current month's report.
14. Each copy of the report sent to the New York Office should be signed by the Secretary, Department Superintendent and by the General Manager or Acting General Manager.
15. The Manager or Acting Manager should inclose with every report to the New York Office a letter in duplicate reviewing the report and calling attention to all items of interest or of marked change.

REPORT FOR 12 months

**Manufacturing and Expense Reports**

OF

# GAS DEPARTMENT

FOR Year ENDING December 31, 1912

# General Rules for Reporting

1. The Company's name should be stamped on report covers, and on the first page, and the name of the City or Plant at the head of every other page in the report.

2. Date of reports should be stamped at the top of every page.

3. Decreases should be in red.

4. Never use copying ink.

5. Special or unusual entries, corrections of back errors, changes in cumulative figures, discrepancies between annual and monthly reports, should invariably be explained.

6. Carry per unit costs four decimal places.

7. Items which do not apply to your Company's business, and cannot be filled in, should be checked, excepting large sections such as lines 1200-22, which should be ruled out.

8. Zeros should be filled in; don't leave blank lines.

9. Where statistical information asked for is not given, state reasons for omitting.

10. Figure "per meter" data on meters at close of month, less company and sub-meters.

11. Figure "per consumer" data on consumers at close of month.

12. Show residuals, lines 1004 to 1007, **"per ton of coal carbonized."**

13. Line 1425 should show the sum total of lines 905 and 906 on previous month's report, plus line 907 on current month's report.

14. Each copy of the report sent to the New York Office should be signed by the Secretary, Department Superintendent and by the General Manager or Acting General Manager.

15. The Manager or Acting Manager should inclose with every report to the New York Office a letter in duplicate reviewing the report and calling attention to all items of interest or of marked change.

REPORT FOR Year Ending December 31 - 1912.

*Ord. No.* 363.

An Ordinance establishing a unit of measure and a standard for manufactured gas, regulating the quality, purity, pressure, supply and use of gas; defining the duties of gas companies; creating the office of gas inspector, and defining his duties; providing for a reduction in the price to be paid for gas not meeting the required standard established herein; establishing penalties for the violation of the provision hereof, and repealing all ordinances in conflict herewith.

Be it ordained by the Mayor and Council of the city of Lincoln:

Section 1. Unit of Measure. The unit of measure for the sale by meter of manufactured gas used for illuminating or heating purposes, shall be the cubic foot of sixty two and 321/1000 pounds avoirdupois weight of distilled rain water, weighed in air of the temperature of 62° Fahrenheit scale, the barometer being at 30 inches.

Section 2. Standard. All gas manufactured and sold in the city of Lincoln for illuminating or heating purposes, shall be of the following standard: It shall have an illuminating power of not less than 18 English sperm candles when burned from a Suggs London Argand Burner No. 1, at the rate of five cubic feet per hour. It shall contain not less than 625 British Thermal Units per cubic foot, at a pressure of 14.7 pounds per square inch and a temperature of 60° Fahrenheit scale. It shall have sufficient odor to be readily detected by its smell. It shall contain not to exceed 20 grains of sulphur per one hundred cubic feet.

1178 It shall contain not to exceed 10 grains of am-onia per one hundred cubic feet, and shall contain no sulphuretted hydrogen. It shall have a pressure of not less than one and one-half inches nor more than five inches measured in a water *guage* at the place where tested as herein provided.

Section 3. Testing Room. The city council shall provide a suitable room in the city hall or elsewhere to be used as a testing room by the gas inspector, and shall install and maintain therein all necessary apparatus, chemicals, supplies, books and records for testing and recording the pressure, quality, purity, and illuminating and heating power of the gas supplied by any gas company to consumers in the city of Lincoln, and also all necessary apparatus, supplies, and records for testing, sealing and recording the accuracy of meters supplied and used by any gas company in said city. Said testing room shall be equipped with a Junker's Calorimeter, or a Calorimeter of standard make approved by the gas inspector; a bar photometer, or a photometer of a construction approved by the gas inspector, a self registering pressure *guage*, and all necessary apparatus, chemicals and supplies for making tests for the presence of sulphur, am-nia, and sulphuretted hydrogen, and a machine of standard make approved by the gas inspector for testing meters, with necessary ma-

terials and apparatus for marking and numbering each meter tested with the result of the test and its date, together with all necessary books and records for recording the results of all tests and keeping a permanent record thereof.

Section 4. Gas Inspector. The Water Commissioner is hereby made ex-officio Gas Inspector with authority to authorize the
1179 assistant superintendent of lighting plant, or any other competent person in his department, to act as assistant gas inspector.

Section 5. Duties of Gas Inspector. It shall be the duty of the gas inspector to inspect, test, and determine the pressure, quality, purity, heating, and illuminating power of the gas manufactured and furnished to consumers for illuminating and heating purposes by any gas company in the city of Lincoln, once each day and report in writing to the city council the results of said tests as to the pressure, quality, purity, heating and illuminating power. It shall be the duty of the gas inspector upon the written demand of any gas consumer and the payment of a fee of one dollar, together with the location of the meter he desires to have tested, to at once notify in writing the gas company owning said meter that a complaint has been filed and the time when he will send after such meter, whereupon the gas company shall, in the presence of the gas inspector or assistant, disconnect said meter, replacing it with another meter and deliver the old meter to the gas inspector to be tested by him, and if said meter shall be found to be correct, according to the standard hereinafter fixed, the one dollar paid by the gas consumer shall remain the property of the city. But if the meter is found to register more gas than consumed, within the standard hereinafter fixed, the fee of one dollar shall be paid by the gas company owning the meter and the gas inspector shall deliver to said gas consumer his certificate, showing that the meter has been found to register more gas
1180 than consumed and the fee of one dollar paid by said gas consumer shall be repaid to him by the city treasurer on production and delivery of such certificate. It shall be the duty of the gas inspector to record in a suitable book provided for that purpose the number of meters inspected and sealed or condemned by him with the date, and name of the manufacturer and the result of such test, and he shall make a monthly report to the mayor and city council of the results of such tests.

Section 6. Meters: Standard and Application. All meters registering within two per cent slow or three per cent fast in every one hundred cubic feet of gas registered at a pressure of not less than one and one-half inches or more than five inches, measured in a water guage, and when measuring the number of cubic feet per hour that the meter is designed to measure, shall be considered accurate. Inspection herein provided for shall be conclusive both upon the gas company and the consumer as to the amount of gas consumed during the three months previous to the month in which such meter shall be inspected.

Section 7. Monthly Reports. It shall be the duty of the gas inspector to report in writing monthly to the mayor and city council

the result of all tests of gas and meters made by him during said month, showing all moneys received by him, and to pay over to the city treasurer all money collected by him for testing meters and file his receipt therefor.

Section 8. Penalty for Violation of Standard. If the gas furnished by any gas company is found, on any test, to fail to meet the standard and requirements established by this ordinance, the gas in-
1181 spector shall at once notify the mayor and city council, and such gas company, and shall make daily tests thereafter until the gas is found to comply with the standard and requirements herein established. And if the gas of any gas company is found for three consecutive days to fall below the standard and requirements established by this ordinance, such gas company shall be deemed guilty of a misdemeanor, and upon conviction thereof, shall be subject to a fine of One Hundred Dollars for each day that the gas furnished by it, fails upon inspection, to meet the standard and requirements herein established, Provided, the penalty provided for herein shall not be enforced when the failure to furnish gas according to the standard and requirements herein established, is by reason of some unavoidable accident and was not caused through any negligence or fault of said gas company.

Section 9. Gas Below Standard Price. In case the gas furnished by any gas company to gas consumers within the city of Lincoln shall fall below the average of 625 British Thermal Units for the period of a month, beginning on the 20th of the month and ending on the 20th of the succeeding month, a reduction from the maximum amount allowed to be charged therefor by any gas company, under the ordinances of the city, shall be made to such gas consumers, of five cents for each ten British Thermal Units which the average of such gas as hereinabove set forth shall show below 625 Thermal Units.

Section 10. Application of Tests. The tests made by the Gas Inspector of the city for the purpose of determining the British Thermal Units shall be conclusive on all gas companies furnishing gas in the city of Lincoln, for the purpose of determining the price
1182 to be paid for such gas by the gas consumers as hereinabove set forth. It shall not be necessary for the gas inspector to make more than 15 tests for the purpose of determining the British Thermal Units on 15 separate days within any given month, and the average thereof shall be taken and deemed to be the average for the month for the purposes of determining the price to be paid therefor. If more than 15 tests are made the average shall be taken of all the tests so made.

Section 11. Inspection of Books and Records. The books and records of all gas companies shall be subject to inspection by the officers of the city of Lincoln for the purpose of determining the amount charged and received for gas by any such company during any particular month.

Section 12. Violations of Ordinance. If any person shall counterfeit or wilfully deface the seal placed upon any gas meter by the gas inspector, the person or persons so offending shall be guilty of a

misdemeanor and shall upon conviction thereof be fined not less than Twenty-five Dollars ($25.00) or more than One Hundred Dollars ($100.00). Any gas company, after receiving a written notice from the gas inspector, refusing to disconnect within twenty-four hours any meter of any consumer in the city of Lincoln and to deliver the same to the gas inspector to be tested shall be guilty of a misdemeanor and upon conviction thereof shall be fined in the sum of not less than Ten Dollars ($10.00) or more than One Hundred Dollars ($100.00).

Section 13. Application of Ordinance. The provisions of this Ordinance shall apply to all companies which manufacture or distribute gas for sale for illuminating or heating purposes; and
1183 the term "gas Company", shall include all persons, firms, corporations, or individuals who own or operate works for the manufacture and sale of gas for illuminating or heating purposes.

Section 14. Repealing Clause. All Ordinances and parts of Ordinances in conflict herewith are hereby repealed.

This Ordinance shall take effect and be in force from and after its passage, approval and publication according to law.

1184 (COPY OF EXHIBIT "52.")

In the District Court of Lancaster County, Nebraska.

CITY OF LINCOLN, Plaintiff,

vs.

LINCOLN GAS & ELECTRIC LIGHT COMPANY, a Corporation, Defendant.

*Petition.*

The plaintiff a municipal corporation existing under the laws of the state of Nebraska as a city of the first class having more than 40,000 and less than 100,000 population brings this action against the defendant and for cause of action alleges:

1. The defendant is a corporation organized and existing under the laws of the state of Nebraska with its principal office in the city of Lincoln, Nebraska, and is now and has been for more than five years last past engaged in the business of manufacturing and furnishing gas to the inhabitants of such city.

2. That on the 10th day of December, 1906, the mayor and council of the city of Lincoln duly passed an ordinance whereby there was levied upon all gas companies manufacturing and furnishing gas to the inhabitants of said city an occupation tax in the sum and amount of two and one half per cent of the gross receipts of such companies derived from the business of manufacturing and furnishing gas as aforesaid, the same to be of force and take effect January 1, 1907: The said ordinance was duly approved by the mayor on December 13, 1906, and was on the same day duly published as required by law and thereupon the same became a legal and valid ordinance and in full force and effect; that the payment of
1185 said taxes was required by the provisions of said ordinance to be made monthly, the first payment became due on February 15, 1907 and the monthly payments thereafter became due and payable on the 15th day of each and every month and in case of default in such payment it was provided that such taxes should draw interest at the rate of one per cent per month and after six months' delinquency a penalty of five per cent was required to be added to the amount due; that said Gas Companies were further required by said ordinance to file with the city clerk of such city on the 16th day of each and every month a statement verified by the managing officer of said company, showing the gross receipts of the previous month. A copy of said ordinance is hereto attached marked exhibit "A" and made a part of this petition.

3. Plaintiff alleges that said ordinance has been in full force and effect since January 1st, 1907, and defendant has during all of said time been manufacturing and selling gas to the inhabitants of the city of Lincoln and the gross receipts derived by it therefrom have been at least the sum and amount of $18,000. per month; that defendant has wholly failed and refused to comply with the provisions of said ordinance or any of them and has refused to make and file with the city clerk of said city the verified statement as to its receipts derived from such business as required by the provisions of such ordinance and by reason thereof the plaintiff is unable to state the exact amount of such receipts.

Plaintiff alleges that there is now due and payable from defendant to the city of Lincoln the occupation taxes as aforesaid for the period commencing January 1st, 1907 and ending March 31, 1908
1186 the sum of at least $6,750.00 on which there is interest amounting to at least the sum of $450.00 and penalties of at least $200.00 aggregating more than $7,400.00 in all, all of which is due and payable from defendant to plaintiff.

Wherefore, the plaintiff prays that an account be taken of the amount due it from defendant as taxes, interest and penalties under said ordinance in the sum of $7,400.00 and for such other and further sum as may be found due on account of said taxes, interest and

penalties and for such other, further and different relief as be found to be just and equitable.

[SEAL.] DANIEL H. McCLANAHAN,
*Notary Public.*

EXHIBIT "A."

*Ordinance Number* 439.

An Ordinance providing for and assessing an occupation tax upon all gas companies manufacturing and furnishing gas to the inhabitants of the city of Lincoln, fixing the amount thereof, providing for the enforcement and collection thereof, and providing interest and penalties for non-payment when due and payable, and designating the funds to be credited with the amount so paid.

1187

Be it Ordained by the Mayor and Council of the City of Lincoln:

Section 1. That all gas companies manufacturing and furnishing gas to the inhabitants of the city of Lincoln are hereby required to pay an occupation tax, and the amount thereof as hereinafter specified is hereby assessed against said company or companies.

Section 2. That all gas companies manufacturing and furnishing gas to the inhabitants of the city of Lincoln are hereby required to pay to the City of Lincoln as an occupation tax the sum and amount of two and half per cent (2½%) of the gross receipts of said company derived from its business of manufacturing and furnishing gas to the inhabitants of the city of Lincoln, payment thereof to be made as follows: Beginning with January 1, 1907, said gas company or companies shall on the 15th day of each and every month thereafter pay the city of Lincoln two and one half per cent (2½%) of the gross receipts of said company for the preceding month, as hereinabove provided, as an occupation tax, and all deferred payments shall draw interest at the rate of one per cent (1%) per month, and after payment has been in default for six months a penalty of five per cent (5%) shall be added thereto in addition to the interest charge and shall be paid by said gas company or companies.

Section 3. All such gas companies on the 10th day of each month

as hereinabove provided, shall file with the city Clerk a full and complete detailed statement of the income and operating expenses and other charges of said gas company for the preceding month, and said statement shall be duly verified and sworn to by the managing officer of any such gas company or companies, and the city of
1188 Lincoln shall have the right at any and all times during business hours to inspect, through its officers, agents or representatives, the books and records of any such gas company or companies for the purpose of verifying such report or reports, Provided, however, that in case any such gas company or companies shall refuse, fail or neglect to furnish or file such report at the time or times specified, or shall refuse to permit the city of Lincoln through its officers, agents, or representatives, to inspect the books and records of any such company for the purpose of verifying such report or reports, then and in that event the occupation tax for the preceding month shall be and hereby is fixed and determined to be the sum and amount of one thousand dollars and said amount shall draw interest at the rate of one (1%) per month after due and payable, and in addition thereto a penalty of five per cent for failure to pay within six months.

Section 4. In case any such gas company or companies shall fail to make payment of the occupation tax *and* hereinbefore provided, and at the time or times hereinabove specified, the city of Lincoln shall have the right and may sue any such gas company or companies in any court of competent jurisdiction for the amount of the occupation tax due and payable under the terms and provisions of this ordinance, and may recover therein a judgment against any such gas company or companies for the amount so due, together with interest and penalties, and may have execution thereon.

Section 4½. Said occupation tax shall be paid to the City Treasurer of the City of Lincoln, at the time specified in this ordinance, and he shall issue and deliver a receipt therefor, upon the
1189 payment thereof, and the amount so paid shall be credited by the City Treasurer to the general fund of the city, unless otherwise directed by the mayor and council.

Section 5. All ordinances or parts of ordinances in conflict herewith are hereby repealed.

Section 6. This ordinance shall take effect on January 1, 1907, after its passage, approval and publication according to law.

Introduced by L. J. Dunn, John S. Bishop, W. C. Frampton, Wm. Schroeder.

Company, defendant. Petition. Clerk's Office, District Court, Lancaster County, Nebraska. Filed. May 26, 1908. J. S. Baer, Clerk District Court.

1190 COPY PLAINTIFF'S EXHIBIT #53.

In the District Court of Lancaster County, Nebraska.

CITY OF LINCOLN, Plaintiff,

vs.

LINCOLN GAS & ELECTRIC LIGHT COMPANY, a Corporation, Defendant.

*Answer.*

Comes now the defendant in the above entitled action and for its answer to the petition of the plaintiff herein avers:

1. Defendant admits that it is a corporation organized and existing under the laws of the State of Nebraska, with its principle office in the city of Lincoln, and that it is engaged in the business of manufacturing and furnishing gas to the inhabitants of said city.

2. Defendant admits that plaintiff is a municipal corporation organized under the laws of the state of Nebraska, and is a city of the first class having more than forty thousand and less than one-hundred thousand population.

3. Further answering defendant represents and shows unto the court that a city ordinance imposing an occupation tax on the gas business of defendant was passed by the mayor and council of the city of Lincoln on December 10th, 1906. That the Lincoln Traction Company, a corporation heretofore organized under the laws of the state of Nebraska, and having its principle place of business in the city of Lincoln, is at present, and was at and prior to the date of the passage of said occupation tax ordinance, in full use and enjoyment of franchise rights granted by ordinance of said city, to construct, operate, and maintain a plant for carrying on the
1191 business of furnishing electricity to the inhabitants of said city for use of light, heat, and power; and said Traction Company at the date of the passage of said ordinance had, and ever since said date has had, a fully equipped plant for said purposes in operation, and at all times since the passage of said ordinance has offered to, and is now offering to, and in fact supplying the public with light, heat and power, in direct and open competition with the gas business of defendant. That from the said 10th day of December, 1906. until the 11- day of March 1908, and while the said Lincoln Traction Company was furnishing electricity to the public for lighting, heating and power purposes, in open and direct competition with the gas business of defendant, the said Traction Company was not required by city ordinance or otherwise to pay an occupation tax on its electric light, heat or power business, and continued to furnish elec-

tricity for said purposes to the public without an occupation tax thereon until an ordinance imposing such tax was passed by the mayor and city council of Lincoln on the 16th day of March, 1908, Defen*f*ant further represents and shows unto the court that the said occupation tax ordinance passed December, 10th, 1906, by the mayor and council of the city of Lincoln, which imposed an occupation tax on this defendant is in the sum of two and one half per cent. of the gross receipts derived from the business of manufacturing and furnishing gas is partial, discriminatory, and excessive in this: it imposed upon the defendant an occupation tax based upon the gross receipts of defendant derived from the manufacture and sale of gas, and did not impose such tax upon other concerns who were engaged in the manufacture and sale of electricity in the city of Lincoln in open and direct competition with defendant; and said or-
1192 dinance operates to deprive defendant of the equal protection of the *loss* by imposing a discriminatory tax upon defendant not imposed thereby or in any other law upon defendant's competitor in business, and to deprive defendant of its franchise rights and privileges and of its property without due process of law.

4. Defendant alleges that said ordinance was intended by said city of Lincoln to discriminate against defendant in said lighting business and in favor of the said Lincoln Traction Company, and to deprive defendant of the right and power to compete in its gas department with said electric light, heat and power business of the said Traction Company; and, if enforced, will operate as such discrimination, to the pecuniary embarrassment and ruin of defendant's gas business. Defendant says that the said occupation tax sought to be imposed upon it is so burdensome and oppressive that it cannot comply therewith nor pay the sums therein and thereby imposed out of the revenues permitted by the ordinance of said city to be collected for the public services rendered by defendant; and said ordinance, if enforced, will be prohibitive upon defendant's continuance in business, and will operate to utterly destroy all of defendant's rights and privileges and franchises heretofore granted by the franchise ordinance of the city of Lincoln to this defendant, and will deprive defendant of the said contract rights and privileges and of its properties without due process of law.

5. Defendant alleges that said ordinance violates the fourteenth amendment to the Constitution of the United States, because
1193 it denies the defendant the equal protection of the law. It violates section 6 of Article 9 of the Constitution of Nebraska, because it imposes a tax that is not uniform as to the class specified. It violates section 1 or Article 9, of the Constitution of Nebraska, because it imposes a tax for revenue and the tax is not levied by valuation and in proportion to the value of defendant's property. The ordinance is void for the further reason that it imposes a double tax on the property of defendant in that it is in effect a tax on the franchise, the earnings being the princip*le* basis of the value of the franchise, and the franchise of defendant having already been taxed for state, and municipal purposes by valuation for the present fiscal year.

6. Defendant denies that it is indebted to plaintiff in the sum of $7,400., for occupation tax on its gas business as alleged by plaintiff, or in any sum whatsoever. Further answering defendant denies each and every allegation in plaintiff's petition contained not hereinbefore specifically admitted, qualified, or denied.

Wherefore, defendant asks judgment that plaintiff take nothing by this action, and that defendant have judgment for its costs and disbursements herein.

CITY OF LINCOLN, Plaintiff,

vs.

LINCOLN GAS & ELECTRIC LIGHT COMPANY, Defendant.

*Supplemental Answer.* 40—38.

Comes now the defendant in the above entitled action, and for supplemental answer to the petition of the plaintiff:

1. Alleges that subsequent to the filing of its answer herein an adjudication has been had in the matters at issue in this case and between the parties herein in the case of Lincoln Gas & Electric Light Company, Complainant, vs. City of Lincoln, et al., in the Circuit Court of United States, for the District of Nebraska, in which case en- of the issues was the validity of the ordinance theretofore passed by the plaintiff herein and referred to as Exhibit "A" in Plaintiff's petition.

2. That on the 6th day of April, 1909, a decree was entered in said case in said Circuit Court of United States, perpetually enjoining the city of Lincoln from enforcing said occupation tax ordinance. a copy of said decree is hereto attached, marked Exhibit "A," and made a part hereof. That said decree and injunction is now in full force and effect and has never been appealed from and the adjudication herein alleged is a complete and final bar against any recovery on the part of the plaintiff to recover in the matters pleaded in its petition.

Wherefore, defendant prays that it may go hence without day,

and recover its costs; and for such other and further relief as
1198 is just and equitable.

In the Circuit Court of the United States for the District of Nebraska.

LINCOLN GAS & ELECTRIC LIGHT COMPANY, Complainant,

vs.

CITY OF LINCOLN, FRANCES W. BROWN, Mayor; EDMUND C. STRODE, City Attorney of said City of Lincoln, Defendants.

*Decree.*

This cause came on for hearing upon the pleadings and the evidence and the argument of counsel having heretofore been submitted to the court, and upon due consideration whereof the Court
1199 finds for the defendants and finds no equity in the bill of complaint, so far as the same relates to the ordinance of the city of Lincoln establishing a rate of charges for gas in such city, and the same is hereby dismissed and the restraining order heretofore granted against the enforcement of such ordinance is hereby dissolved, without prejudice to the commencement of a new action.

The Court further finds that the ordinance of the City of Lincoln levying an occupation tax against the complainant violates the constitution of the State of Nebraska and is for that reason illegal and void, and that the enforcement of the same as to complainant should be perpetually enjoined.

It is therefore adjudged and decreed that a permanent injunction be and the same is hereby granted perpetually enjoining the City of Lincoln from enforcing said occupation tax ordinance.

It is further adjudged that the complainant pay the costs of this action.

WM. H. MUNGER, *Judge.*

1200 PLAINTIFF'S EXHIBIT "56."

In the District Court of Lancaster County, Nebraska.

STATE OF NEBRASKA on Relation of FRANK M. TYRRELL, County Attorney of Lancaster County, Nebraska, Relator,

vs.

LINCOLN GAS AND ELECTRIC LIGHT COMPANY, a Corporation, Defendant.

*Petition and Information.*

Comes now the State of Nebraska by Frank M. Tyrrell, County Attorney of Lancaster County, Nebraska, and alleges that he is the duly elected, qualified and acting County Attorney of Lancaster County, Nebraska, and as such on the complaint of the City of Lincoln, and on behalf of the State of Nebraska, he brings this action and alleges and shows to the court:

1. That the defendant is a corporation organized and existing under the laws of the State of Nebraska for the purpose of owning and operating a light and power system and to manufacture and sell gas and electric current and as such has its place of business in the City of Lincoln, Nebraska.

2. That the defendant is now occupying the streets and alleys and public grounds in the City of Lincoln, Nebraska, for its gas mains and pipes, electric light poles and wires and other equipment and appliances used in connection with its said light and power system and is furnishing by and through the same gas and electric current to a large number of the inhabitants of the city of Lincoln for lighting, heating and power purposes.

That defendant claims the right and privilege of so occupying the streets, alleys and public grounds of said city solely as a
1201 purchaser and assignee by *mense* transfers and conveyances ans as successor to the privileges and property rights of a

corporation known as the Lincoln Gas Company, to which last named corporation the mayor and council of the city of Lincoln on or about March 12, 1872, by ordinance assumed to grant a license and permission for twenty-one years only, to use and occupy the streets and alleys and public grounds of said city for the purpose of laying therein gas pipes and fixtures and to supply to the inhabitants of such city through such pipes gas for illuminating purposes.

3. Your relator avers that any right or privilege that may have been granted by said ordinance to said Lincoln Gas Company expired according to the terms thereof at the end of twenty one years after the date of passage, to-wit: March 12, 1893, and no right, privilege or franchise now exists thereunder or by virtue thereof.

This relator further avers that no right, privilege or franchise was ever granted to the defendant by the City of Lincoln to use or occupy its streets, alleys or public grounds for any purpose whatsoever and that defendant is now unlawfully and without right occupying the streets, alleys and public grounds of the said City of Lincoln for its gas pipes, mains and electric light poles and wires and other equipment and appliances connected therewith and is now usurping the rights and privileges and franchise of so using said streets, alleys and public grounds of the said city, and will continue such unlawful use and occupancy and will lay additional gas pipes and mains and erect additional electric light poles and wires unless ousted from such occupancy by this court.

Wherefore your relator prays that it be adjudged that
1202 defendant have no right, privilege or franchise to occupy said streets, alleys or public grounds or maintain therein its gas pipes, mains, electric light poles and wires or other equipment or appliances used in connection therewith and that a judgment of ouster be entered against the defendant commanding it to remove from the streets, alleys and public grounds of the City of Lincoln, its gas pipes, mains, electric light poles and wires and all equipment and appliances connected therewith.

[Endorsed on Back:] 39-258. State Ex Rel. Tyrrell vs. Lincoln Gas & Electric light Company. Petition. Clerk's office District

Court, Lancaster County, Nebraska. Filed April 11, 1908. J. S. Baer, Clerk District Court. Frank M. Tyrrell and John M. Stewart, attorneys.

1203 PLAINTIFF'S EXHIBIT "57".

In the District Court of Lancaster County, Nebraska.

STATE OF NEBRASKA on Relation of FRANK M. TYRRELL, County Attorney of Lancaster County, Nebraska, Relator,

vs.

LINCOLN GAS & ELECTRIC LIGHT COMPANY, a Corporation, Respondent.

*Answer.*

Comes now the respondent, the Lincoln Gas & Electric Light Company, and for its answer to the petition and information of the relator filed herein represents and shows unto the court:

1. Respondent admits that Frank M. Tyrrell, is the duly elected, qualified and acting County Attorney of Lancaster County, Nebraska.

2. Respondent admits that it is a corporation organized and existing under the laws of the state of Nebraska, for the purpose of owning and operating a light and power system and to manufacture and sell gass and electric current in the city of Lincoln, Nebraska; that it is now occupying the streets, alleys, and public grounds in the city of Lincoln, Nebraska, for its gas mains and pipes, electric light poles and wires and other equipments and appliances necessarily used in connection with its said light and power plant.

Respondent denies that it is unlawfully and without right occupying and using the streets, alleys, and public grounds of the city of Lincoln, and represents and shows unto the court that in the year 1872 the city of Lincoln granted by ordinance unto the
1204 predecessor of your respondent, The Lincoln Gas Company, certain franchises and privileges contained in the following ordinance, to-wit:

"An ordinance granting the use of the streets, lanes, alleys, public grounds, and sidewalks, in the city of Lincoln, to the Lincoln Gas Company.

Approved March 12, 1872.

Be it ordained by the Mayor and Councilmen of the city of Lincoln:

1. Lincoln Gas Company.—That license and permission be and the same are hereby given and granted to the Lincoln Gas Company, of Lincoln, Nebraska, to erect, construct, and complete, gas works within the corporate limits of the city of Lincoln aforesaid; and that said Company is hereby authorized and permitted to use and

occupy the streets, lanes, alleys, public grounds, and side walks of said city, for the purpose of laying down and repairing all pipes and other fixtures for conducting gas for light in and under the streets, lanes, alleys, public grounds, and sidewalks of said City, or any future addition which may be made thereto.

2. Exclusive Privilege to.—The Lincoln Gas Company shall have the exclusive right and privilege of furnishing illuminating gas in said city for a period of twenty-one years, from the 9th day of March, 1892 and of using and occupying the streets, lanes, alleys, public grounds, and sidewalks, for the purpose specified in the first section of this ordinance.

3. Duties of Company.—The said Lincoln Gas Company shall manufacture and constantly supply (unavoidable delays and accidents excepted) the city and inhabitants of Lincoln, on streets
1205 where gas main-pipes are laid with good quality of illuminating gas, at a price not to exceed five dollars per one thousand feet.

4. When to Take Effect.—This ordinance is to take effect and be in force from and after its publication according to law."

Said ordinance was passed containing the above grant and franchises within five years of the organization of Lincoln, as an incorporated village or city, and in order to secure the establishment of a gas plant and the investment of capital therein at that time when the public demand for such service in Lincoln was wholly inadequate and insufficient to warrant such investment, and exclusive franchise or grant for a period of twenty-one years was included in said ordinance, in addition to the perpetual grant therein contained. And respondent represents and shows unto the court that under said ordinance ther- was granted the Lincoln Gas Company a perpetual franchise, and said Company was ther-by authorized and permitted to occupy and use the public streets and grounds of said city for the purpose of laying therein gas mains and pipes, and other fixtures and appliances for conducting gas for light, and said grant was without limitation of time, and was perpetual; that in addition to said perpetual grant The Lincoln Gas Company was granted an exclusive franchise, or monopoly for al period of twenty-one years from March 9th, 1872, for making and supplying gas in said city; that said Lincoln Gas Company accepted the terms and conditions of said grants and entered ypon the streets and public grounds of said city persuant thereto, and established its gas plant in said city
1206 and invested therein large sums of money on the faith of the grants so made by said city.

3. That in June 1890, the city of Lincoln enacted another ordinance with respect to the franchises and grants of the Lincoln Gas Company, which was as follows; omitting the title and concluding section thereof.

"Be it ordained by the Mayor and Council of the City of Lincoln:

1. That section one of and ordi-ance entitled "An ordinance granting the use of the streets, lanes, alleys, public grounds, and

sidewalks, in the city of Lincoln, to the Lincoln Gas Company," approved March 12, 1872, be amended so as to read as follows:

1. That license and permission be, and the same are hereby given and granted to the Lincoln Gas Company of Lincoln, Nebraska, to erect, construct, and complete gas works within the corporate limits of the city of Lincoln aforesaid; and the said company is hereby authorized and permitted to use and occupy the streets, lanes, alleys, public grounds, and sidewalks, of the said city for the purpose of laying down and repairing all pipes and other fixtures, for conducting gas for light, fuel, and heat in and under the streets, lanes, alleys, public grounds, and sidewalks of said city, for any future addition which may be made thereto, and to establish, construct, acquire, maintain, own, and operate within the corporate limits aforesaid of said city of Lincoln, the necessary buildings, works, machinery, appliances, and structures for the purpose of furnishing and
1207 supplying electricity for the purpose of illumination and power for moving machinery and vehicles, and erect, acquire, own, and maintain within the corporate — aforesaid, and in and upon the streets, lanes, alleys, public grounds, and sidewalk space of said city, or any future addition which may be made thereto, wires or other conductors of electricity, for conducting electricity for illuminating or power purposes, and to erect, acquire, own, establish, and maintain within the corporate aforesaid, and in and upon the streets, lanes, alleys, public grounds, and sidewalk space of said city of future addition there to, posts, poles, towers, and other conductors of electricity. Provided, That such posts, poles, towers, and other structures, and appliances, including wires and conductors of electricity, shall be erected and placed, as not to obstruct the use of said streets, alleys, lanes, public grounds, and sidewalk space for the purpose of travel."

That by reason of said ordinance the grant, franchises and privileges of the Lincoln Gas Company were enlarged and extended so that said Company was granted a perpetual grant and franchise, for the erection and maintenance of gas and electric light works within the corporate limits of Lincoln, and authorized and permitted to use the streets and public grounds of said city for the purpose of laying gas mains, pipes and other fixtures for conducting gas for light, fuel and heat, and the use of the streets, public grounds for wires, poles, and other fixtures for conducting electricity for illuminating and powers purposes throughout the city; that said grants so made were without limitation of time and were perpetual.

1208 4. That in May of 1900 the city of Lincoln enacted another ordinance with respect to the franchise rights and grants of the Lincoln Gas Company its successors and assigns, which was as follows, omitting the title and concluding sections thereof:

"Be it ordained by the Mayor and City Council of the city of Lincoln:

Section 1. That section one of the ordinance, "An ordinance to "amend section one of and ordinance, intitled and ordinance granting the use of the streets, lanes, alleys, public grounds, and side-

walks, of the city of Lincoln to the Lincoln Gas Company," approved March 1872, "approved June 19, 1890, be amended so as to *e*read as follows:

1. That license and permission, and the same are hereby given and granted to the Lincoln Gas Company of Lincoln, Nebraska, its successors and assigns, to erect, construct, and complete gas works within the corporate limits of the city of Lincoln aforesaid, and the said company is hereby authorized and permitted to use and occupy the streets, lanes, alleys, public grounds, and sidewalks of said city, for the purpose of laying down and repairing all pipes, and other fixtures for conducting gas for light, fuel and heat, in and under streets, lanes, alleys, public grounds, and sidewalks of said city, or any future addition which may be made thereto, and to establish, construct, acquire, maintain, own, and operate within the corporate limits aforesaid, in said city of Lincoln the necessary building, works, machinery, appliances and structures for the purpose of furnishing and supplying electricity for the purpose of illuminating and power for moving machinery and vehicles, and erect, acquire, own, and maintain within the corporate limits aforesaid, and in and upon the streets, lanes, alleys, public grounds, and sidewalk space of said city, or any future addition which may be made thereto, wires, or other conductors of electricity for conducting electricity for illuminating or power purposes, and to erect, acquire, own, establish, and maintain within the corporate limits aforesaid, and in and upon the streets, lanes, alleys, public grounds, and sidewalk space of said city, or any future addition, posts, poles, towers, and other conductors of electricity, provided, that such posts, poles, towers, and other structures and appleances, including wires and conductors of electricity, shall be erected and placed as not to obstruct the use of said streets, lanes, alleys, public grounds, and sidewalk space, for the purpose of travel."

That said ordinance was enacted more than nine years after the expiration of the exclusive franchise included in the ordinance of 1872. The grants and franchises contained in section one of the ordinance of May, 1900, were without limitation of time and were perpetual, and The Lincoln Gas Company its successors and assigns was thereby granted the perpetual use of the public streets, and public grounds of said city for its gas mains, pipes and other fixtures, in supplying gas for light, fuel and heat, and for its poles, wires, and other appliances for supplying and conducting electricity for light and power throughout the city.

5. That by reason of said ordinances, and on the faith thereof the Lincoln Gas Company transferred assigned and delivered unto the Lincoln gas & Electric Light Company, its successors, all of its property, grants, franchises and privileges in the city of Lincoln, in 1901; that the Lincoln Gas & Electric Light Company since so acquiring said property, franchise, grants and privileges has extended said gas and electricity light plants throughout the city, and has invested large sums of money in the extention and in the maintainance of said plants; that said investments have been made upon the faith of the grants made by the city of Lincoln to the Lincoln Gas Com-

pany its successors and assigns, hereinbefore set forth. That the said city of Lincoln in all of its dealings and transactions with the respondent and its predecessor, The Lincoln Gas Company, since the passage of the ordinance of 1872, and construed and applied said ordinance as containing a perpetual grant and in addition thereto an exclusive grant expiring March 9th, 1893; that since the expiration of said exclusive grant the city of Lincoln has regulated by ordinance the rate to be charged by your respondent for gas and electricity light, for heat and power, and has by ordinance regulated the quality of gas to be furnished by your respondent since 1901, and has required you- respondent to pay an annual tax on the franchise and grants included in the ordinances herein set forth down to and including the year 1908, and your respondent relying upon the construction of the grants and franchises placed thereon by the
1211 city of Lincoln, has expended large sums of money in improving and extending said gas and electricity light plants, and your respondent submits that the city of Lincoln and the relator are estopped and concluded by the construction so placed on said grants, and are estopped and concluded from questioning the validity of the grants in perpetuity so made and extended to your respondent and its predecessor.

Wherefore your respondent prays that the application of the relator may be dismissed, and that the relator take nothing and that the respondent recover its costs.

Tyrrell, County attorney of Lancaster County, Nebraska, relator, vs. Lincoln Gas & Electric Light Company, a corporation, Respondent. Answer. Clerk's office District Court, Lancaster County, Nebraska. Filed October 19, 1908. J. S. Baer, clerk District Court. Halleck F. Rose attorney for Respondent.

1213 PLAINTIFF'S EXHIBIT 58.

In the District Court of Lancaster County, Nebraska.

CITY OF LINCOLN, Plaintiff,

vs.

LINCOLN GAS & ELECTRIC LIGHT COMPANY, Defendant.

*Petition.*

Comes now the plaintiff, the City of Lincoln, in the above entitled case and for cause of action against the defendant represents and shows unto the court that the plaintiff is and was at all times hereinafter mentioned, a city of the first class, having more than forty thousand inhabitants and less than one *one* hundred thousand inhabitants, and was organized and exists under and by virtue of the laws of the State of Nebraska.

Plaintiff further alleges that the defendant, the Lincoln Gas and Electric Light Company, is and was a*l* all times hereinafter mentioned, a corporation organized and existing under and by virtue of the laws of the state of Nebraska, with its principal office in the City of Lincoln, Nebraska, and that it now is and has been at all times hereinafter mentioned engaged in the business of selling electricity and gas to a great number of the inhabitants of the city of Lincoln and within the corporate boundaries of said city.

Plaintiff further alleges that the Mayor and City Council of the City of Lincoln, duly and regularly acting, did on or about the 13th day of December, 1909, pass an ordinance providing for the levy and collection of an occupation tax upon the business of furnishing and selling gas and electric current for lighting and other
1214 purposes, to the inhabitants of the City of Lincoln; such tax to be in sum and amount of 3% of the gross receipts derived from selling electricity and gas by *s*uch person or company engaged in such business.

The ordinance further provided that such tax was to be paid monthly and was to become due on the 15th day of each and every month, and in case of default in the payment of such tax, it was provided that such tax draw interest at the rate of 1% per month, and after six months- delinquency a penalty of 5% required to be added to the amount due; and said ordinance further provided that the person or company engaged in the business of selling electricity and gas should on the 15th day of each and every month, file with the City Clerk, a full, complete and detailed statement of the income and gross receipts from such business of selling electricity and gas during the preceding month, such report to be duly verified and sworn to by the person in charge of such business. Said ordinance was duly approved and published and became effective according to law on January 13, 1910. A copy of said Ordinance, marked Exhibit "A", is attached hereto and made a part of this petition.

Plaintiff further alleges that said ordinance has been in full force and effect since the 13th day of January, 1910, and that the defendant during all of such time has manufactured and sold electricity and gas to the inhabitants of the City of Lincoln and within the corporate limits of said City, and plaintiff further says that the gross receipts from said business are in large amounts as hereinafter stated, but that said company has failed, refused and neglected to pay any occupation tax to the City of Lincoln as provided by the ordinance aforesaid.

1215 Plaintiff further says that the defendant has wholly failed, neglected and refused to make and file with the city clerk of said City of Lincoln, the verified statement or report required by the ordinance, showing the gross receipts of said defendant from its business of selling electricity and gas, as aforesaid, and that by reason thereof the plaintiff is unable to state the exact amount of such receipts.

Plaintiff further says that the said defendant the Lincoln Gas & Electric Light Company, from its business of furnishing and selling electricity and gas to the inhabitants of the city of Lincoln, has derived gross receipts in excess of the amount, it is believed by plaintiff, of $12,000 per month; the real amount, however, of such receipts is to the plaintiff unknown, and plaintiff has no means of ascertaining the same, except by an accounting in this suit; and plaintiff further says that under the terms and conditions of said ordinance the said defendant should have paid as an occupation tax to the said city of Lincoln certain sums plaintiff believes in amount to be about $360 each month during all the period of time from the first day of February, 1910, to the 30th day of November, 1910, and plaintiff further says that the said amounts of tax for each respective month during which such receipts were derived by said defendant company, and that all sums due and payable and unpaid draw interest at the rate of 1% per month until paid, under the terms and provisions of said ordinance.

Plaintiff further says that the taxes for the months of February, March, April and May have been due and delinquent for

1216 more than six months and draw penalties at the rate of 5% of said tax, and the plaintiff says that there is now due and payable from the defendant, the Lincoln Gas & Electric Light Company, to the plaintiff, the city of Lincoln, certain sums and interest, and penalties thereon the exact or approximate amount of which, the plaintiff does not know and is unable, except by this its suit for an accounting, to learn, but plaintiff believes that the whole amount so due aggregates about $3,900, all of which is due from the defendant to the plaintiff and no part of which has been paid.

And the plaintiff further says that the accounts and records of such receipts are all in possession of and under the control of the defendant company, and that the accounts are complicated and are made to be understood by defendant alone, and plaintiff cannot and could not, if access to said accounts were given, ascertain the amounts justly due from defendant to the plaintiff; and plaintiff has no adequate remedy at law.

Wherefore, the plaintiff prays that an account may be taken of the amount due from the defendant to the plaintiff as taxes, interest and penalties under said ordinances, and that for such sum as may be found to be due on account of said taxes, interest and penalties, the plaintiff may be awarded judgment against the defendant with costs of suit, and awarded such other, further and different relief as may be found to be just and equitable in the premises.

[SEAL.] J. S. BAER,
*Cl'k Dist. Court,*
By W. C. BURCHAM, *Dep.*

EXHIBIT "A".

*Ordinance No.* 732.

An Ordinance providing for the levy and collection of an occupation tax upon the business of furnishing electric current and gas for lighting and other purposes and to repeal chapter- 64 and 66 of the Consolidated Ordinance of 1908.

Be it Ordained by the Mayor and Council of the City of Lincoln, Nebraska:

Section 1. Every person or corporation engaged in the business of selling electricity or gas in the city of Lincoln, Nebraska, is hereby assessed and required to pay as an occupation tax a sum and amount equal to three (3) per cent of the gross receipts arising from such business.

Section 2. Such payment shall be made on the 15th day of each month and be based and computed upon the gross receipts of such business for the preceding month and all payments shall
1218 draw interest at the rate of one per cent per month from and after the same becomes due and after payment has been in default for six months a penalty of five per cent shall be added thereto in addition to said interest.

Section 3. Such corporation shall on the 15th day of each month

file with the City Clerk a full, complete and detailed statement of the income and gross receipts of said business for the preceding month duly verified and sworn to by the person in charge of such business, and the city of Lincoln shall have right at any and all times during business hours through its proper officers or representatives to inspect books and records of any such corporation for the purpose of verifying such report.

Section 4. In case such corporation shall fail to make payment of said occupation tax, interest and penaltioes as herein provided, the City Treasurer is hereby authorized to issue distress warrant for the collection thereof and the officer to whom the same is delivered shall collect the amount of such tax by levy upon and sale of the personal property of the person or corporation owing the same, in like manner as provided by statute for the levy and sale under distress warrant issued for the collection of personal property tax. The city of Lincoln may also sue such corporation in any court of competent jurisdiction for the amount of said occupation tax and may recover therein a judgment against such corporation for the amount so due with interest and penalties and may have execution thereon.

Section 5. Said occupation tax shall be paid to the City Treasurer and he shall deliver his receipt therefor and the amount paid shall be credited to the general fund of said city.

1219 Section 6. Chapters sixty-four and sixty-six of the general revised and consolidated Ordinance of the City of Lincoln of 1908 providing for the levy of an occupation tax upon the electric light and gas companies of such city are hereby repealed. Provided, however, that such repeal and enactment of this Ordinance shall in no wise affect the liability for the payment of any occupation tax, interest and penalty levied under the provisions of such ordinance so repealed shall not in any wise affect the right of the City of Lincoln to commence or prosecute any actions or proceedings for the collection of any such tax.

Section 7. This ordinance shall take effect and be in force from and after its passage, approval and publication according to law.

Endorsed on Back: 45-155. District Court. City of Lincoln vs. Lincoln Gas & Electric L'g't Company. Amended Petition. Clerk's Office District Court, Lancaster County, Nebraska. Filed Mar. 29, 1911. J. S. Baer, Clerk Dist. Court.

1220 COPY PLAINTIFF'S EXHIBIT "59".

CITY OF LINCOLN, Plaintiff,

vs.

LINCOLN GAS & ELECTRIC LIGHT COMPANY, Defendant.

*Amended Petition.*

Comes now the plaintiff, the City of Lincoln, in the above entitled case and for cause of action against the defendant, represents and shows unto the court, that the plaintiff is and was at all times hereinafter mentioned, a city of the first class, having more than forty thousand inhabitants and less than one hundred thousand inhabitants, and was organized and exists under and by virtue of the laws of the state of Nebraska.

Plaintiff further alleges that the defendant, the Lincoln Gas & Electric Light Company, is and was at all times hereinafter mentioned, a corporation organized and existing under and by virtue of the laws of the state of Nebraska, with its principal office in the city of Lincoln, Nebraska, and that it now is and has been at all times hereinafter mentioned engaged in the business of selling electricity and gas to a great number of the inhabitants of the City of Lincoln and within the corporate boundaries of said City.

Plaintiff further alleges that the Mayor and City Council of the City of Lincoln, duly and regularly acting, did, on or about the 13th day of December, 1909, pass an ordinance providing for the levy and collection of an occupation tax upon the business of furnishing and selling gas and electric current for lighting and other purposes, to the inhabitants of the city of Lincoln; such tax to be in sum and amount of three per cent. of the gross receipts derived
1221 from selling electricity and gas by such person or company engaged in such business.

The ordinance further provided that such tax was to be paid monthly and was to become due on the 15th day of each and every month and in case of default in the payment of such tax, it was provided that such tax draw interest at the rate of one per cent. per month, and after six months' delinquency, a penalty of five per cent. required to be added to the amount due; and said ordinance further provided that the person or company engaged in the business of selling electricity and gas should on the 15th day of each and every month, file with the City Clerk, a full, complete and detailed statement of the income and gross receipts from such business of selling electricity and gas during the preceding month; such report to be duly verified and sworn to by the person in charge of such business. Said Ordinance was duly approved and published and became effective according to law on January 13th, 1910. A copy of said Ordinance, marked exhibit "A" is attached hereto and made a part of this petition.

Plaintiff further alleges that said Ordinance has been in full force

and effect since the 13th day of January, 1910, and that the defendant during all of such time has manufactured and sold electricity and gas to the inhabitants of the City of Lincoln and within the corporate limits of said City, and plaintiff further says that the gross receipts from said business are in large amounts as hereinafter stated, but that said company has failed, refused and neglected to pay any occupation tax to the City of Lincoln as provided by the Ordinance aforesaid.

Plaintiff further says that the defendant has wholly failed,
1222 neglected and refused to make and file with the City Clerk of said City of Lincoln, the verified statement or report required by the Ordinance, showing the gross receipts of said defendant from its business of selling electricity and gas, as aforesaid, and that by the reason thereof the plaintiff is unable to state the exact amount of such receipts.

Plaintiff further says that the said defendant, the Lincoln Gas & Electric Light Company, from its business of furnishing and selling electricity and gas to the inhabitants of the City of Lincoln, has derived gross receipts in excess of the amount, it is believed by plaintiff, $12,000.00 per month; the real amount, however, of such receipts is to the plaintiff unknown, and plaintiff has no means of ascertaining the same, except by an accounting in this suit; and plaintiff further says that under the terms and conditions of said ordinance the said defendant should have paid as an occupation tax to the said City of Lincoln certain sums, plaintiff believes in amount, to be about $360.00 each month during all the period of time from the first day of February, 1910, to the 30th day of November, 1910, and plaintiff further says that the said amounts of tax for each respective month during which such receipts were derived by said defendant company, and that all sums due and payable and unpaid draw interest at the rate of one per cent. per month until paid, under the terms and conditions of said ordinance.

Plaintiff further says that the taxes for the months of February, March, April and May have been due and delinquent for more than six months and draw penalties at the rate of 5% of said tax, and the plaintiff says that there is now due and payable from the de-
1223 fendant, the Lincoln Gas & Electric Light Company, to the plaintiff, the City of Lincoln, certain sums and interest, and penalty thereon, the exact or approximate amount of which, the plaintiff does not know and is unable, except by this, its suit for an accounting, to learn, but plaintiff believes that the whole amount so due aggregates about $3,900.00 all of which is due from the defendant to the plaintiff and no part of which has been paid.

Plaintiff further alleges that the Mayor and City Council of the City of Lincoln, duly and regularly acting, did on or about the 16th day of March, 1908, pass an ordinance for the levy and collection of an occupation tax upon the business of furnishing and selling electric current for lighting and power purposes to the inhabitants of the city of Lincoln. Such tax being in the sum and amount of two per cent. of the gross receipts derived from selling electricity by such corporations engaged in such business.

The Ordinance further provided that such tax was to be paid monthly and to become due on the 15th day of each and every month, commencing on the 15th day of April, 1908, and in case of default in the payment of such tax, it was provided that such tax draw interest at the rate of one per cent. per month from the date when payable, and after six months' delinquency, a penalty of five per cent. to be added to the amount due, and said Ordinance further provided that the person or company engaged in the business of selling electricity, should on the 15th day of each and every month file with the City Clerk a full, complete and detailed statement of the income and gross receipts from such business of selling electricity during the preceding month; such statement to be verified
1224 and sworn to by the person in charge of such business. Said Ordinance was duly approved and published and became effective according to law on the 15th day of April, 1908. A copy of said Ordinance marked exhibit "B" is attached hereto and made a part of this petition.

Plaintiff alleges that the said Ordinance was in full force and effect from the 15th day of April, 1908, to the 15th day of January, 1910, when it was repealed by the Ordinance set out in exhibit "A" hereto attached and that said Repealing Ordinance specifically reserved all right of the City of Lincoln to commence or prosecute any actions or proceedings for the collection of any tax levied in the Ordinance so repealed; and that the defendant during all of such time has manufactured and sold electricity to the inhabitants of the City of Lincoln, and within the corporate limits of said City, and plaintiff further says that the gross receipts in said business are in large amounts, but that said company has failed, refused and neglected to pay any occupation tax to the City of Lincoln as provided by the Ordinance aforesaid, and has failed, refused and neglected to make any report of its gross receipts, as by said Ordinance required; that with interest and penalties there is now due from the defendant, the Lincoln Gas & Electric Light Company, to the plaintiff, the City of Lincoln, the sum and amount of approximately $10,000.00 the exact amount being unknown to the plaintiff for the reason that the accounts and records of such gross receipts are all in possession of defendant.

And the plaintiff further says that the accounts and records of such receipts are all in possession of and under the control of the defendant company, and that the accounts are complicated
1225 and are made to be understood by defendant alone, and plaintiff cannot and could not, if access to said accounts were given, ascertain the amounts justly due from defendant to the plaintiff; and plaintiff has no adequate remedy at law.

Wherefore, the plaintiff prays that an account may be taken of the amount due from the defendant to the plaintiff as taxes, interest and penalties under said Ordinances, and that for such sum as may be found to be due on account of said taxes, interest and penalties, the plaintiff may be awarded judgment against the defendant with

costs of suit, and awarded such other, further and different relief as may be found just and equitable in the premises.

1226 EXHIBIT "A".

*Ordinance No. 732.*

An Ordinance providing for the levy and collection of an occupation tax upon the business of furnishing electric current and gas for lighting and other purposes and to repeal chapters 64 and 66 of the Consolidated Ordinance of 1908.

Be it Ordained by the Mayor and Council of the City of Lincoln, Nebraska:

Section 1. Every person or corporation engaged in the business of selling electricity or gas in the City of Lincoln, Nebraska, is hereby assessed and required to pay as an occupation tax the sum and amount equal to three (3) per cent. of the gross receipts arising from such business.

Sec. 2. Such payment shall be made on the 15th day of each month and be based and computed upon the gross receipts of such business hours through its proper officers or representatives to interest at the rate of one per cent. per month from and after the same becomes due and after payment has been in default for six months, a penalty of five per cent. shall be added thereto in addition to said interest.

Sec. 3. Such corporation shall on the 15th day of each month file with the City Clerk a full, complete and detailed statement of the income and gross receipts of said business for the preceding month duly verified and sworn to by the person in charge of such business, and the City of Lincoln shall have right at any and all times during business hours through its proper officers or representatives to in-

spect books and records of any such corporation for the purpose of verifying such report.

1227 Sec. 4. In case such corporation shall fail to make payment of said occupation tax, interest and penalties as herein provided, the City Treasurer is hereby authorized to issue distress warrant, for the collection thereof and the officer to whom the same is delivered shall collect the amount of such tax by levy upon and sale of the personal property of the person or corporation owing the same, in like manner as provided by statute for the levy and sale under distress warrant issued for the collection of personal property tax. The City of Lincoln may also sue such corporation in any court of competent jurisdiction for the amount of said occupation tax and may recover therein a judgment against such corporation for the amount so due with interest and penalties and may have execution thereon.

Sec. 5. Said occupation tax shall be paid to the City Treasurer and he shall deliver his receipt therefor and the amount paid shall be credited to the General Fund of said City.

Sec. 6. Chapters Sixty-four and Sixty-six of the General Revised and Consolidated Ordinance of the City of Lincoln for 1908, providing for the levy of an occupation tax upon the electric light and gas companies of such City are hereby repealed. Provided, however, that such repeal and enactment of this Ordinance shall in no wise affect the liability for the payment of any occupation tax, interest and penalty levied under the provisions of such Ordinance so repealed and shall not in any wise affect the right of the City of Lincoln to commence or prosecute any actions or proceedings for the collection of any such tax.

Sec. 7. This Ordinance shall take effect and be in force from and after its passage, approval and publication according to law.

1228 EXHIBIT "B".

*Ordinance No. 570.*

An Ordinance providing for and assessing an occupation tax on corporations engaged in the sale of electricity for light or power purposes in the city of Lincoln, fixing the amount thereof, providing for the collection and enforcement thereof, and repealing all ordinances and parts of ordinances in conflict herewith. Be it ordained by the Mayor and Council of the City of Lincoln, Nebraska:

Section 1. That every corporation engaged in the sale of electricity for light or power purposes in the city of Lincoln is required to pay an occupation tax and the amount thereof as hereinafter specified is hereby assessed against said corporation.

Sec. 2. All such corporations are hereby required to pay to the City of Lincoln as an occupation tax the sum and amount of 2% per cent. of the gross receipts arising from such business.

Sec. 3. Such corporation shall on the 15th day of April, 1908, and

on the 15th day of each and every month thereafter, pay to the City of Lincoln two per cent. of the gross receipts of said business for the preceding month and all deferred payments shall draw interest at the rate of one per cent. per month from the date when payable and after payment has been in default for six months a penalty of five per cent. shall be added thereto in addition to the interest charged and shall be paid by said corporation.

Sec. 4. Such corporation shall on the 15th day of each month file with the City Clerk a full, complete and detailed statement of the income and gross receipts of said business, duly verified and sworn to by the person in charge of such business, and the City
1229 of Lincoln shall have the right at any and all times during business hours through its proper officers or representatives to inspect the books and records of any such corporation for the purpose of verifying such report. And in the event that such corporation shall fail or refuse to file such report at the time specified the occupation tax for the preceding month shall be and the same is hereby fixed and determined to be the sum and amount of $500. and said amount shall be paid on the 15th day of the month as provided for the payment of the 2 per cent. of gross receipts in sections 2 and 3 hereof, subject to the same interest and penalties above specified.

Sec. 5. In case such corporation shall fail to make payment of said occupation tax as herein provided, the City of Lincoln shall have the right and may sue such corporation in any court of competent jurisdiction for the amount of said occupation tax and may recover therein a judgment against said corporation for the amount so due with interest and penalties and may have execution thereon.

Sec. 6. Said occupation tax shall be paid to the City Treasurer and he shall deliver his receipt therefor and the amount paid shall be credited to the General Fund of said City.

Sec. 7. All Ordinances and parts of Ordinances in conflict herewith are hereby repealed.

Sec. 8. This Ordinance shall take effect and be in force on April 1st, 1908, after its passage, approval and publication according to law.

Introduced by B. A. George, Councilman.
Passed March 16th, 1908.

CITY OF LINCOLN, Plaintiff,

vs.

LINCOLN GAS & ELECTRIC LIGHT COMPANY, Defendant.

*Reply.*

Comes now the plaintiff and for reply to the defendant's answer and for answer to defendant's plea in abatement therein set up:

1. Admits all of paragraph two contained in defendant's plea in abatement except the last sentence, and denies said last sentence therein, and all of paragraph 3, and for further answer thereto, alleges that the ordinance mentioned in paragraph 2, fixing the price of gas in the City of Lincoln at $1.00 net per thousand cubic feet sold, is a valid and legal ordinance and that the rate in the City of Lincoln during the existence of the ordinance set out in exhibit "A" attached to the plaintiff's petition is $1.00 net per thousand cubic feet of gas sold, and on which basis the plaintiff now requests the court to compel the defendant to account for occupation taxes as heretofore prayed in plaintiff's amended petition.

For further reply to defendant's answer, separate and apart from defendant's plea in abatement, the plaintiff denied each and every allegation therein contained except such as specifically admit the allegations of plaintiff's petition.

THE CITY OF LINCOLN, Plaintiff,

vs.

LINCOLN GAS & ELECTRIC LIGHT COMPANY, Defendant.

*Reply of Intervenors.*

Come now intervenors herein and for reply to defendant's answer, deny each and every allegation therein contained except as herein admitted; and for further reply say that the ordinance referred to in defendant's answer fixing the rate of charges for gas in the city of Lincoln at one dollar per thousand cubic feet was and is a legal and valid ordinance, the enforcement of which has been temporarily enjoined; and these intervenors join with the City of Lincoln and pray an accounting and judgment in favor of the plaintiff under the occupation tax ordinances set out in the petition of the plaintiff and of intervenors on the basis of $1.00 per thousand cubic feet of gas sold by the defendant.

CITY OF LINCOLN, Plaintiff,

vs.

LINCOLN GAS & ELECTRIC LIGHT COMPANY, Defendant.

*Answer.*

Comes now the defendant and for answer to the amended petition of the plaintiff filed herein, and by way of plea in abatement thereto and as a defense to the present maintainance of this action:

1. Admits paragraphs 1 and 2 of said petition; and admits that the plaintiff through its Mayor and City Council did on or about the

13th day of December, 1909, pass an ordinance providing for the levy and collection of an occupation tax as alleged in said petition.

2. Alleges that on or about the 19th day of November, 1906, the plaintiff, through its Mayor and City Council, passed an ordinance to become effective December 1, 1906, entitled: "An Ordinance regulating the price of manufactured gas, establishing penalties for the violation of the provisions of this Ordinance, and repealing all Ordinances in conflict herewith;" a copy of which ordinance is hereto at-ached, marked exhibit "A" and made a part hereof. That said Ordinance provides that no gas company shall charge more than the sum of $1.00 net per one thousand cubic feet of gas sold. That subsequently thereto, to-wit: on the — day of —, 1906, The United States District Court for the District of Nebraska Lincoln Division granted a temporary injunction, enjoining the plaintiff herein from enforcing said ordinance, exhibit "A" in an action entitled: "The Lincoln Gas & Electric Light Company vs. The City of Lin-
1234 coln et al., which action was tried by said District Court, and by said court dismissed. That an appeal thereof was taken to the Supreme Court of the United States, where the judgment of the aforesaid court was reversed and said cause remanded to the United States District Court for the District of Nebraska, Lincoln Division, for further proceedings, where said cause is now pending undetermined. That during all of said time since the granting of said injunction, it has been in full force and effect, by reason of the nature of said order and by reason of the allowance of supersedeas bonds to supersede the dissolution thereof. That at all times mentioned herein and at the present time the rate charged for gas in the city of Lincoln, has been and is the sum of $1.20 per one thousand cubic feet of gas sold.

3. That by reason of the aforesaid matters it is not possible to determine the amount of gross receipts of the defendant herein from the 13th day of January, 1910, to the present time, nor will it be possible to so determine what said gross receipts may have been until the aforesaid cause is finally determined in the courts of the United States. That by reason thereof, this defendant or the court cannot determine what its gross receipts during said period have been, nor can a determination be had of the amount on which to base the levy of any occupation tax, if valid, of any nature until the question of the rate which might be legally charged during said period is adjudicated.

Wherefore, defendant prays that this court may abate this action until the final determination of the cause of the Lincoln Gas & Electric Light Company v. The City of Lincoln, et al., now pending in the courts of the United States, and that the action herein may be continued until the matters in the petition, as stated herein,
1235 are finally adjudicated.

Further for its answer to the petition of the plaintiff filed herein, separate and distinct from its plea in abatement above stated, defendant.

1. Admits paragraphs 1, 2 and — of said petition.

2. Denies each and every other allegation therein contained.

3. Further answering, defendant alleges that said ordinance is void and invalid for the reason that said occupation tax sought to be imposed upon the defendant is so burdensome and oppressive that it cannot comply therewith nor pay the sums therein and thereby imposed out of the revenues permitted by the ordinances of said city to be collected for the public services rendered by defendant; and said ordinance if enforced, will be prohibitive upon defendant's continuance in business and will directly operate to utterly destroy all the defendant's rights, privileges and franchises heretofore granted by the franchise ordinances of the plaintiff to this defendant, and will deprive defendant of vested contract rights and privileges and of its property without due process of law.

4. Further answering this defendant alleges that said ordinance is invalid and void for the reason that it violates Section 1 of Article 9 of the Constitution of Nebraska, because it levies a tax for a revenue under purported authority from the Legislature of Nebraska, granted to the plaintiff, which tax is not in proportion to the value of the property or franchises of this defendant.

5. Further answering, this defendant alleges that said or-
1236 dinance is void, for the reason that it is discrin*mna*tory and discriminates against this defendant in this; that it places a burden upon the gross receipts of this defendant derived from the sale of electric currents and gas for heat, light and power purposes, or without any ordinance of the city placing a like burden upon the competitors of this defendant in furnishing a like service by other means than electric current or gas; that said ordinance is indiscrimnatory and invalid for the reason that neither by the terms of said ordinance, nor by any other ordinance of the city is a like burden placed upon the City of Lincoln in the maintenance and operation of the Municipal Electric Light Plant operating directly in competition with this defendant in said city, in furnishing electric current for light, heat and power purposes; that said ordinance is invalid for the reason that — attempts to levy an additional tax burden upon this defendant at a time and in a manner prohibited by the Charter of the City of Lincoln, and for the years 1910 11-12. Further — is an attempt to levy a tax in excess of the amount authorized by Section 76, Chapter 13, Article 1, Statutes of Nebraska for the year 1911. That the said ordinance is invalid for the reason that it is an attempt on the part of the city of Lincoln to impose penalties and interest on deferred payments in excess of the amount authorized by the law and such excessive penalties and interest charges are invalid and in violation of Section 16, of Article 1, of the Constitution of Nebraska, and Section 9 of Article 1 of the Constitution of the United States, and were an inducement to the passage of the ordinance by reason thereof, said ordinance is invalid; that said ordinance is invalid for
the reason that it attempts to require this defendant to pay a
1237 tax on its gross receipts derived from the sale of gas and electric currents, outside of the city of Lincoln, and not within the jurisdiction of said city. Therefore the said ordinance is void in that it violates Section 1 of Article 9 of the Constitution; in that it imposes a tax for revenue and is not uniform.

Wherefore, the defendant prays that it may go hence without day and recover its cost and for such other relief as may to the court seem just and equitable.

CITY OF LINCOLN, Plaintiff,

vs.

LINCOLN GAS & ELECTRIC LIGHT COMPANY, Defendant.

*Petition of Elliott Lowe and Fred L. Knight to Intervene as Plaintiffs in the Above-entitled Cause.*

Comes now Elliott Lowe and Fred L. Knight, and file herein on behalf of themselves and all others similarly situated, their petition in intervention, and as grounds for intervening allege:

1. That they are now and have been for many years last past residents and taxpayers of the city of Lincoln, and for that reason interested in the collection of the taxes due and owing by the defendant to the plaintiff, for which judgment is prayed in this action.

2. Your intervenors further allege that the petition of the plaintiff was filed herein December 17, 1910, in which petition it is sought to recover from the defendant the occupation taxes due and owing by defendant under an ordinance duly enacted by the mayor and council of the city of Lincoln on the 13th day of December, 1909, requiring it to pay as such taxes a sum equal to 3% of its gross receipts for gas and electricity sold; and thereafter, on March 29th, 1911, an amended petition was filed by the plaintiff, and on October 7th, 1911, a demurrer was filed to such amended petition, which was shortly thereafter submitted for hearing to this court, but no action of any kind has been taken in this case for more than a year last past, and the duly constituted officers of the city of Lincoln
1240 have failed, neglected and refused to prosecute this action, although the claim for such taxes is legal and valid and beyond successful controversy, and now amounts in the aggregate to more than $44,000.

Your intervenors further allege that under an ordinance duly enacted by the city of Lincoln on or about March 15th, 1908, the defendant herein was required to pay as occupation taxes the sum of two per cent upon its gross receipts for all electrical current sold by it, and under such ordinance there is now due, with interest and penalties, the sum of about $8,000. which taxes are legal and valid; yet the mayor, and a majority of the council, and the city attorney of the city of Lincoln, have neglected and refused to bring any suit, or make any attempt to collect such last named taxes. And your petitioners further allege that on or about the 10th day of December, 1906, the mayor and council of the city of Lincoln duly enacted an ordinance whereby there was levied an occupation tax in amount equal to two and one-half per cent upon the gross receipts for gas manufactured and furnished to the inhabitants of said city. That the defendant herein failed, neglected and refused to pay such taxes and the said City of Lincoln, on March 26th, 1908, brought suit against the defendant therefor, and thereafter, and on or about the 15th day of March, 1909, said suit was duly tried and submitted to this court, but no judgment has been rendered therein. That thereafter, and on or about April 6, 1909, in an action then pending
1241 between the defendant Lincoln Gas and Electric Light Company and the City of Lincoln in the District Court of the United States for the district of Nebraska, the collection of the taxes under said ordinance was by said court enjoined; but there after, on appeal to the supreme court of the United States, said decree was reversed and said injunction, as your interveners are informed and believe, was thereby vacated and dissolved, and your interveners allege that said claim for taxes involved in said ordinance of 1906 is a legal and valid claim against the defendant herein and now amounts in the aggregate to more than $25,000.

3. Your interveners further allege that the mayor and council of the city of Lincoln in violation of Sec. 4 of Art. 9 of the constitution of this state, which forbids the release, discharge or commutation of any taxes, and for the purpose of avoiding the further prosecution of this action, wrongfully and without legal right or authority

under the constitution and laws of this state, as your interveners are informed and believe, caused to be submitted to the electors of this city the question of compromising the taxes herein involved, and other similar taxes, amounting in the aggregate to about $75,000. and to accept from the defendant herein the sum of $20,000. in full payment and satisfaction of said amount. And your interveners further allege that the defendant herein has issued bonds and secured the payment of the same by mortgage on all its property to the amount of about $1,250,000. which is largely in excess of the value of its property, and by reason of the neglect and refusal of the duly constituted officers of the city of Lincoln to prosecute this action, said large amount of taxes have accumulated, and on
1242 account of the financial condition of the defendant, its collection has been and is being jeopardized and rendered uncertain and doubtful.

4. Your interveners, for cause of action against the defendant here-in, to avoid repetition, adopt all the allegations and statements made in the amended petition of the plaintiff heretofore filed herein. And for further cause of action allege that on or about the 15th day of March 1908 the mayor and council of the city of Lincoln duly enacted an ordinance levying an occupation tax in amount equal to two per cent of the gross receipts of every corporation engaged in the sale of electricity for light and power purposes in the city of Lincoln arising from such business. A copy of such ordinance is hereto attached, marked exhibit "A" and made a part of this petition of intervention. That under said ordinance the defendant was required to make to the city clerk monthly detailed statements of its income and gross receipts of its said business, duly verified and sworn to, and to pay such taxes on the 15th day of April, 1908, and on the 15th day of each and every month thereafter, and in default to pay such amount to pay interest at the rate of one per cent per month, and in case of default for six months, a further penalty of five per cent. And your intervenors allege that said ordinance continued in full force and effect until about January 1st, 1910. That during the entire time of the existence of said ordinance the defendant herein was engaged in the sale of electricity for light and power purposes in the city of Lincoln, but failed and refused to report monthly to the city clerk a statement of its income and gross receipts required by said ordinance, and failed and refused
1243 to pay any of such taxes. That your intervenors do not know the exact amount of such gross receipts of defendant during the aforesaid period but allege that they amount to more than $250,000. upon which there is now due to the city of Lincoln from defendant for taxes, interest and penalties, the sum of more than $8,000.

Wherefore your intervenors pray that an immediate account may be taken of the amount due from the defendant to the plaintiff as taxes, interest and penalties under the aforesaid ordinance, and that for such sum as may be found to be due on account of said taxes, interest and penalties the plaintiff may be awarded judgment against

the defendant, with costs of suit, and for such other further or different relief as may be just and equitable.

CITY OF LINCOLN, Plaintiff,

vs.

LINCOLN GAS & ELECTRIC LIGHT COMPANY, Defendant.

*Reply to Defendant's Amended Answer.*

Comes now the plaintiff and for reply to the plea in abatement contained in defendant's amended answer, admits the passage of the ordinance set out in exhibit "A" attached thereto, being entitled "An Ordinance regulating the price of manufactured gas, establishing penalties for the violation of the provisions of this ordinance and repealing all ordinances in conflict herewith," and that said ordinance provides that no gas company shall charge more than the sum of $1.00 net per 1,000 cu. ft. of gas sold. Plaintiff further admits that the United States District Court for the District of Nebraska, Lincoln Division, granted a temporary injunction enjoining the plaintiff from enforcing said ordinance; that an appeal thereof was taken to the Supreme Court of the United States where the judgment of the aforesaid Court was reversed and said cause remanded for

further proceedings, where the same is now pending, undetermined. Plaintiff admits that an injunction was granted in said cause and that same has been maintained in force by reason of the allowance of a supersedeas bond to supersede the dissolution thereof; and for further answer to the defendant's plea in abatement, plaintiff denies each and every allegation therein contained, not herein specifically admitted. Plaintiff alleges that said ordinance is a valid and legal ordinance and that the legal rate to be charged for gas in the city of

Lincoln during all the times mentioned in plaintiff's petition
1247 is the sum of $1.00 net per 1,000 cu. ft. of gas sold.

Further, for reply to defendant's answer separate and distinct from its plea in abatement, admits that no summons have been served upon the defendant since the filing of plaintiff's second amended petition, but alleges that defendant has made voluntary appearance herein, and admits that its cause of action in said amended petition is based upon an ordinance passed December 13, 1909, and upon an ordinance passed March 16, 1908, but denies each and every allegation in defendant's answer separate and apart from its plea in abatement contained, not herein specifically admitted.

Wherefore, the plaintiff prays as in its petition more fully set out, for an accounting upon the basis of the gross receipts collected by the defendant at the rate of $1.00 net per cu. ft. of gas sold, and the penalties of 10 cents per 1,000 cu. ft. on all bills not paid within six days after rendition, and for such other relief as to the court may seem just and equitable.

Subject:

1. Blower Lincoln System.
2. Distribution " "

Lincoln Gas & Elec. Lt. Company.

Subject: Proposed District Gas Blower.

By S. W. Cheney.

Date July 22, 1908.

The blower or "booster" which we propose to install is for the purpose of raising the pressure during the "peak" in that portion of the City of Lincoln commonly designated as B 3-4-2, "East Lincoln," and the object of this report is to give data showing the necessity for same.

East Lincoln lies principally east of 20th st. and north of "O" st. It is a choice residential district and is building up very fast, in fact probably faster than any other similar area.

With the distribution system as it is at present, it becomes more and more difficult each year to give service in this district at night, particularly during the winter months.

In endeavoring to get gas to these consumers we have raised the pressure at the plant until we are troubled with high pressure in the western and southern portion of the city. A city ordinance limits our pressure at any appliance to 50/10, but last winter we carried 100/10 at the works giving us 86/10 to 90/10 at 9th and "M" sts.

Appended to this report is a copy of our skeleton map of the distribution system, a table showing pressures taken different days at several locations, and prints of various pressure gauge charts.

The map shows sizes of mains, valve locations and chart locations. The charts are numbered and will be referred to separately. The street names and numerals are shown on the margins of the map and the key to scale and symbols is shown at the top. The sizes of some of the principal mains have been marked on them so that they may be more readily distinguished and also furnish ready guide to the ones unmarked.

1286 It will be seen on the map that the route the gas probably takes to reach East Lincoln is across "M" st. to 18th or around the "loop," that is south on 9th and 10th to "C" St. across "C" to 18th and north on 18th to "M" st. probably most of the gas goes across "M" st.

The accompanying table of pressures was compiled from data taken on four different days in November and December over the night

cooking peak. It shows pressure at the works and along "M" st. and north on 18th st. to "R" st. Readings were taken every five minutes from 5:45 P. M. to 6:15 P. M., inclusive. The vertical columns show location and the horizontal columns show time of day. The values given are inches of water pressure. At some of the locations we were unable to get readings each day.

The small charts numbered 1, 2, 3, 4, etc., were taken in different parts of the city during the months of November, December and January.

The larger charts numbered 1*w*, 2*w*, 3*w*, 4*w*, etc., were taken at the works on the days respectively corresponding to the days on which the smaller ones were taken.

Charts numbers 3*w* and 4*w*, were taken on vacuum gauge blanks because the proper blanks had run out temporarily. They are, however, recalibrated as closely as possible.

Charts numbers 1, 3, 7, 9, and 10 show the pressure in the western and southern parts of the city and the rest of them show the conditions in East Lincoln.

Charts numbers 1, 3, and 4 were taken in outlying districts on the days when the first three sections of the table of pressures were taken.

In order to meet the condition of affairs as shown by the data given above and at the same time avoid an expenditure of $10,000.00
1287 or $12,000.00 for larger main we propose the following scheme:

To close or partially close the following valves already in place, 9th and "M" north side, 10th and "M" north side, 18th and "N," 17th and "O," 18th and "P," 18th and "Q."

To install valves which will be wholly or partially closed at the following locations: 10th and "M" south side, 11th and "M" north side and south side and at 17th and "M" north and south sides, all 4" valves, also a 10" valve at 18th and "M" south side.

To install at 9th and "M" sts. a motor driven booster of the centrifugal fan type, capable of handling 25000 cu. ft. of gas per hour received at a pressure of 64 tenths of an inch of water and delivered at a pressure of 144 tenths.

The distance from 9th to 18th st. is about 3600 feet. 25000 cu. ft. of gas received at 9th and "M" st. at 144 tenths will be delivered at 18th and "M" st. about 64 tenths pressure. This is 15 tenths higher than we were able to get last winter and with this increase we should be able to get about 10 tenths increase at the extremities of the mains in East Lincoln.

By proper adjustment of the present and proposed valves the 8 inch main on "M" st. can be made practically a transmission main alone, also the main running north on 18th st. from "M" st. to "R" St.

The 8" main on "M" st. is on the south side of the street and is paralleled from 11th to 17th st. by a 4 inch main on the north side of the street. The services on the north side are fed from this and this in turn may be fed from the 6 inch main on "O" st., via 11th st., or if necessary the valve at 11th and "M," north side, can be
1288 opened slightly.

The services on the south side of "M" st. may be fed from the 8" main by placing a house governor on each one.

The valve at 9th and "M" north side may be closed or nearly so and "N" st. and "O" st., to 18th st. and section north may be fed from 10 inch main on 6th street.

The valve at 9th and "M" south side may be left open to feed the south part of town, the valves at 10th and "M," 11th and "M" and 17th and "M" both north and south sides may be closed or nearly so, the valve at 18th and "M" south side may be closed or nearly so in order that when the pressure is raised the gas will not flow south unless needed to keep up pressure.

The adjustment of the several valves can be determined by trial when we find out where the pressures are high or low.

Our estimate of the cost of this installation is as follows:

| | Material. | Labor. |
|---|---|---|
| 5 4" valves | $40.00 | $40.00 |
| 1 8" valve | 20.00 | 20.00 |
| 1 10" valve | 32.00 | 30.00 |
| 1 Sturtevant Blower | 265.00 | 75.00 |
| Piping, valves, etc., for same | 250.00 | 200.00 |
| 2 H. P. Motor, belt, etc | 70.00 | 50.00 |
| Blower house | 40.00 | 45.00 |
| 85 Governors ($1.65 each, setting, $2.00 each) | 141.00 | 170.00 |
| | $858.00 | $630.00 |
| | | 858.00 |
| Total | | $1,488.00 |

Of these amounts we have the 85 governors in stock unused.

Figures given by B. F. Sturtevant Co. show that it will take about two H. P. to run the booster. Running five hours a day would make a consumption of 10 H. P. hours or allowing for extra say 10
1289 K. W. hours per day or 3650 K. W. hours per year. Charging this at 3c. per K. W. hour the cost of power would be $109.00. Interest and depreciation on investment of $1488.00 at 15% would be $223.00. The rent on lot for blower house would be about $150.00 per year. Total cost per year $482.00. The interest alone on an investment of $10,000.00 at 6% for one year would be $600.00.

The above scheme, we calculate, will meet requirements probably for two winters but not more. At the end of that time it will be necessary to make some extensive changes and additions to the distribution system.

Plaintiff's Exhibit 98 Marsh & Bacon Reporters

Drawing #36

1317

1318 Whereas, the Lincoln Gas & Electric Light Company of the City of Lincoln, Nebraska, has petitioned the Mayor and Council of said city, for a permit to construct a gas tank, to be used for the storage of gas, and whereas, the Mayor and Council find that such a holder is for the best interests of the gas consumers of the city of Lincoln, and that such holder is proper as an appliance to furnish more uniform and better service to the inhabitants of said city, and especially to those in East Lincoln; and,

Whereas, the City of Lincoln does not recognize any franchise or contractual rights as at the present time existing in, or as having been granted to the Lincoln Gas & Electric Light Company; but does recognize that said company is operating in said city under irregular ordinances, which has resulted in a license to said company only and said city claims that said license is revocable and may be terminated by the city at its option at any time; and,

Whereas, there is now pending in the District Court of Lancaster County, Nebraska, a suit instituted to test the question of the franchise of the Lincoln Gas & Electric Light Company and whereas it is understood and agreed that said suit is to be continued and tried and the parties are to abide the ultimate outcome of the said proceedings in the courts, and

Whereas, it is hereby agreed that a grant of permission to build a gas holder herein shall in no way prejudice the city's rights, as they at present exist, of revoking the Gas Company's license to operate within the said city nor be construed as a waiver of the City's right to terminate the license as above stated; nor shall anything herein contained be construed as a grant of any franchise right, nor shall permission to erect said holder in any way prejudice or change the rights of said city in the suit now pending, or in said city's rights to institute a suit and to have the alleged franchise declared void; nor shall anything herein contained be construed as a waiver by the Gas Company of its claim that it has a valid subsisting

1318½ franchise; nor as a waiver of any of its rights at present existing whatsoever.

Now therefore, it is hereby agreed by and between the parties that the Mayor and Council of the City of Lincoln, Nebraska, for and upon considerations as hereinafter stated, do hereby grant to the said gas company, permission to build a gas holder for the storage of artificial gas used in heating and illuminating purposes, said permission being coextensive in time only with the rights of the said company as they at present exist, and upon revocation or termination of whatever rights the said company now has, the said permission to operate or maintain the gas holder, shall at the same time be concluded and limited.

It is further agreed that said holder will be constructed at 32d and X streets, to-wit: upon lots, 7, 8, 9, 10, 11, 12, 13, 14 and 15, all in Block 2, Peck's Grove Addition to the City of Lincoln; and said holder to be of a kind and constructed according to the plans and specifications for same last filed in the City Engineer's office.

And the said Lincoln Gas & Electric Light Company hereby agrees to make the following connection with service pipes in East Lincoln

and to lay the following mains and pipes, according to a plat now on file with the City Engineer, to-wit: a 4" main on 33rd street, from O street to T street, and a 6" main from T street to the proposed holder, and to extend the 4" main on T street from 31st street to 33rd street, and a 4" main on Vine street from 29th to 33rd street; and said company further agrees to keep said service pipes connected with said holder at all times open, so that gas may flow freely from said holder through said pipes to consumers in that vicinity and district.

And the said Lincoln Gas & Electric Light Company agrees to maintain a gas pressure in a district east of 27th and north of O street within the said city, to the standard required by the present ordinance of said city, without increasing the downtown pressure.

It is hereby further understood and agreed that nothing herein contained shall be construed as granting permission to said company to manufacture gas in the said location or vicinity of said holder or in connection therewith.

1319 & 1320

And the said Lincoln Gas & Electric Light Company further agrees, immediately upon the completion of said holder to plant Pine trees of a size eight inches in diameter of trunk, and at 30 ft distance apart, and two rows surrounding said holder with the object of hiding the same from view. One row to be Austrian Pine and one row Bull Pine.

And it is further agreed by the said Lincoln Gas & Electric Light Company that should it fail to perform any of the agreements herein expressed, that this agreement shall be of no force and effect and in such event the said permit upon notice from the Council, to the said gas company, shall stand revoked and be the same as if it has never been issued. And the said Company in that event shall upon order from the Council, disconnect and cut off all service pipes running from or connected with said holder.

In witness whereof, we have hereunto placed our signature.

CITY OF LINCOLN,
D. L. LOVE, *Mayor.*
LINCOLN GAS & ELECTRIC LIGHT CO.,
By B. C. ADAMS, *General Manager.*

Attest:
R. C. OZMAN, *City Clerk.*

STATE OF NEBRASKA,
*Lancaster County, ss:*

I, Roscoe C. Ozman, City Clerk of the City of Lincoln, Nebraska, do hereby certify that the above and foregoing is a true and correct copy of an agreement by and between the City of Lincoln, and the Lincoln Gas & Electric Light Company of said city, as shown by the records and files in my office.

Dated this 10th day of May 1913.

[Seal of City of Lincoln, Lancaster County, Nebraska.]

ROSCOE C. OZMAN,
*City Clerk.*

The Rookery: Chicago, Ill.,
Long Distance Telephone, Wabash 2066,
Auto 52-855.

Eliot A. Kebler, Sales Manager.

General Office & Works: Massillon, Ohio,
Long Distance Telephone No. 13.

CHICAGO, ILLINOIS, U. S. A., May 5th, 1913.

Lincoln Gas & Electric Light Company, Lincoln, Nebr.

GENTLEMEN: Your letter of the 3rd at hand. We enclose herewith a car giving the standard weights of water pipe as adopted by

the American Water Works Association on May 12th, 1908 and we are now furnishing class "A" to Gas Companies.

You will note a variation allowed from these weights is shown at the bottom of this list. Please note that the information given on our invoice is not based on Railroad weights but on our own weights, and of course, if these were found to be incorrect by the Railroads, they would make claim on you for the difference in the freight rate, which would be caused thereby, so that you will see there is a double check on these weights.

Yours very truly,

THE MASSILLON IRON & STEEL COMPANY,
ELIOT A. KEBLER, *Sales Manager.*

E. A. K., R.

1329 Lincoln Gas & Electric Company, Lincoln, Nebr.

This additional information may be of use to you.

1336 Sheffield Cast Iron Pipe & Foundry Co.

Manufacturers of Cast Iron Gas and Water Pipe and Specials.

SHEFFIELD, ALABAMA, May 7, 1913.

Lincoln Gas & Electric Light Co., Lincoln, Nebraska.

DEAR SIRS: We beg to acknowledge receipt of your favor of the 3rd, and are glad to give you as much information as we are able to.

I am enclosing herewith a schedule showing the four classes of pipe from "A" to "D," inclusive, in diameters from 4" to 20", inclusive, which will give you the thickness of the pipe in inches and the weight of pipe per foot and weight of pipe per length.

I am also enclosing a sheet which will show the socket dimensions of the different classes of the different diameters from 4" to 20", inclusive, and I hope that this will be some of the information which you desire.

The specifications as given have been standard for a number of years, but I am unable to say just how many years.

In answer to your question as to whether there was any difference in charge between gas pipe and water pipe of the same size and weight, I would say that there should be no extra charge for gas pipe simply because it was to be used for gas. As a practical matter, gas pipe commands a higher price because it is practically always of a much lighter weight than pipe used in connection with water works, and as the loss in manufacture of light weight pipe is much greater than the loss in the manufacture of heavier weights in the same diameter, it is of course necessary for the manufacturer to charge a slightly higher price per ton in order to protect himself on the increase percentage of loss at the foundry. In other words, quotations on gas pipe are higher on account of the lightness in weight
1337 and not simply from the fact that the pipe is to be used for gas rather than water.

In answer to your question as to which class is specified when quoting on standard gas pipe, I would say that in nearly all cases the purchaser of gas pipe makes his own specifications as to weight per foot, which are usually slightly under the class "A" weights. For instance, on 4" pipe, the lightest class, calls for 20 pounds to the foot, while nearly all gas companies in asking for quotations or placing orders for 4" pipe, specify the pipe to be 19 pounds per foot.

I trust that these statements will answer your questions, but if they do not, or if there are any other questions that arise in your mind, it will give us great pleasure to give you any further information that we can.

Very truly yours,

SHEFFIELD CAST IRON
PIPE & FOUNDRY CO.,
W. S. HATCH,
*Ass't to President.*

MASSILLON, OHIO, U. S. A., April 14, 1913.

O. R. Mallon, P. A., Lincoln Gas & Elec. Light Co., Lincoln, Neb.

DEAR SIR: Replying to your favor of the 9th to our Chicago office, which has been referred to us for attention, we give you below an approximate list of prices for the year- 1906 to 1912, inclusive.

The prices we mention are per net ton of 2,000 lbs. F. O. B. cars our foundry, Massillon, Ohio, and we would say for your further information that the carload rate of freight from our foundry to your city is $5.75 per net ton, so that this amount would have to be added to our figures.

The prices we have named, we believe, will average up very well for the sizes you mention, namely, from 4 to 20".

| | |
|---|---|
| 1906 | $32.00 |
| 1907 | $31.00 |
| 1908 | $26.00 |
| 1909 | $25.00 |
| 1910–11–12 | $23.00 |
| Std. B. & S. Fittings | $50.00 |

We trust this information will be of value and regret that your letter did not reach us in time for us to have the information in your hands prior to today.

Yours truly,

J. R. DAUGLER,
*Sec'y & Ass't Treas.*

1352 The Western Gas Construction Company,
Main Office and Works Fort Wayne, Indiana.

This agreement, made the 24th day of May in the year one thousand nine hundred and twelve by and between The Western Gas Construction Company of Fort Wayne, Indiana, a corporation duly organized under the laws of the State of Indiana. party of the first part (hereinafter designated the "Contractor") and The Lincoln Gas & Electric Light Company of Lincoln, Nebraska, party of the second part (hereinafter designated the "Owner");

Witnesseth, That the Contractor, in consideration of the covenants and agreements contained herein on the part of the Owner, does covenant, promise and agree with the said Owner, in manner following, that is to say:

1. Any part or portion of the Specifications which are struck out are not included in this Agreement.

2. The Contractor shall and will well and sufficiently furnish, erect and finish, to the reasonable satisfaction of the Owner, subject to strikes, fires, freight blockades, and any other cause beyond their control, all the Gas Apparatus and Machinery described and specified in its Specification No. 5066 comprising pages 1 to 13 inclusive, dated May 15, 1912 the original being herewith delivered to and receipt thereof acknowledged by the Owner, and whereof an impression or duplicate copy is retained by the Contractor, generally comprising the following apparatus:

7′–6″ Generator 7′ 0″ Carburettor 7′ Superheater and 5′ 6″ seal including connections to outlet from present seal.

3. The apparatus shall be accepted upon completion in accordance with the Specification.

4. The Owner will receive and properly store at the expense of the Contractor all materials which may arrive before the erectors of the Contractor, will hold Contractor harmless for damage to materials by fires or other causes, and afford all necessary protection from depredation of any sort until acceptance of the apparatus, will use proper precaution to prevent the access of unauthorized persons to the premises where said work is being done.

5. The Owner shall furnish and provide the buildings, inclusive of the foundations, all yards and other excavations, fillings and refillings, pavings, floors, openings in walls and roofs, flashings for stacks, etc., all necessary steam, oil, water and drain connections at respectively convenient points for the several apparatus, all connections and parts of the gas plant not specified in the before mentioned specifications, in all respects suitable and sufficient, also openings or doors in the several rooms of suitable size to allow the apparatus of the Contractor to pass.

6. The Owner shall have the buildings in proper condition for the erection of the Apparatus on its arrival otherwise pay Contractor for expenses necessarily incurred through such delay. Nor during erection delay the progress of the work, otherwise pay for time men are idle, and traveling expenses, (if necessary to leave work and re-

turn -ater to continue or complete same,) including any other expenses necessarily incurred through such delay.

7. It is hereby mutually agreed between the parties hereto that the sum to be paid by the Owner to the Contractor for the proper execution of the provisions of this agreement shall be Eight Thousand and no/100 Dollars ($8,000.00) lawful money of the United States, payable at par in Fort Wayne, Indiana, as follows:

Fifty per cent. of the contract price in proportion as material is shipped or delivered to the premises of the Owner; twenty-five per cent. of the contract price in such sums as may be called for from time to time during the progress of the work (said amount to include all payments for account of freights, advances to erectors and other sundry charges prior to the completion of the Apparatus) and the balance of the contract price upon acceptance of the Apparatus as hereinbefore provided.

8. There are no understandings, promises or agreements on the part of the Owner or Contractor outside of this contract and specifications noted above, together with terms, conditions, and limitations therein contained.

Apparatus to be ready for operation on or before Aug. 1st, 1912.

In witness whereof, The said parties for themselves, their heirs, executors or assigns, have signed this Agreement in Duplicate, by their agents thereunto duly authorized, as of the day and year first above written.

1353 *Contract for Building a Masonry Tank for Gas Holder.*

This agreement made and concluded this 29th day of June in the year One Thousand Nine Hundred and Ten between the Lincoln Gas & Electric Light Company, party of the first part, and C. P. Hahn, party of the second part.

Witnesseth, that for and in consideration of the payment of $6,375.00 (Sixty-three Hundred and Seventy-five Dollars) to be made by the party of the first part, upon the satisfactory completion of the work hereinafter mentioned, the party of the second part agrees with said party of the first part to furnish all material, labor, and tools, and to build and complete, ready for the iron work, in accordance with the plans furnished and in conformity with the specifications hereto attached, a concrete and brick tank for a gas holder

on the property of the Lincoln Gas & Electric Light Company, party of the first part.

The party of the second part also agrees, in consideration hereof, to enter upon the work covered by the contract as soon as the excavation for the tank is completed, and to complete said work within a reasonable time, taking into account the character and extent of the work to be done.

In witness whereof the parties to these presents have hereunto set their hands, the year and day first above written.

LINCOLN GAS & ELECTRIC
LIGHT COMPANY,
By WM. BRADFORD.
C. P. HAHN.

Signed in the presence of:

O. R. MALLAT,
JNO. J. EAGAN.

1354 *Specifications for Masonry Tank for Gas Holder.*

Scope: The work consists of furnishing all material, tools, and labor, and building and finishing, ready for the iron work, a masonry tank for a gas holder for the Lincoln Gas & Electric Light Company on its property at 32nd & X Street, City of Lincoln, in accordance with the plans furnished and in conformity with these specifications.

The work to be done is shown in detail on the following drawings:

1. Excavations.
2. Concrete and brick work.
3. Details.

Materials: Brick—All brick used shall be sound, hard, and evenly burned red brick and must be approved by the engineer of the company.

Cement—All cement shall be a standard grade of Portland cement approved by the engineer of the company.

Stone—All broken stone used in concrete must be sound and free from dirt and of a size not less than three quarters of an inch nor greater than two inches at its greatest diameter.

Sand—All sand must be clean river sand.

Concrete—All concrete shall be mixed in the proportion of 1 part cement, 2 parts sand, and 4 parts broken stone.

Cement Plaster—All exposed surfaces of concrete shall be covered with one inch of cement plaster mixed in the proportion of 1 part cement and 2 parts clean sand.

Mortar—All brick shall be laid in cement mortar mixed in the proportion of 1 part Portland cement and 2 parts clean sand except as provided later.

Concrete work: All concrete shall be laid in courses of from six to nine inches in depth and each course must be thoroughly rammed in place.

In placing the concrete, it must not be dropped from a height of more than ten feet.

1355 When the work is interrupted at the end of the day, all surfaces of concrete on which additional concrete is to be laid must be covered and kept wet, and before fresh concrete is laid, these surfaces must be thoroughly water soaked and all earthy matter removed.

At each of the points where the gas pipes pass under the tank wall foundation, the concrete will be reinforced by the use of six four-inch I beams, weighing not less than nine pounds per lineal foot, each beam to be eight feet in length.

Brick work: The standard height for laying all brick shall be two courses to five inches and every fifth course shall be a header-course.

The brick in outside and inside faces of the tank wall shall be laid in cement mortar to which has been added sufficient lime to make it work easily and make a good tight joint. These brick shall be laid four courses high between header courses and then cement mortar of the consistency of thick cream poured into the space between, and the brick firmly settled into it leaving positively no voids.

When finished, the tank wall shall be truly circular and plumb and the tank of correct diameter and depth.

Into the walls shall be built the tank rail anchors in accordance with the drawings furnished, and said anchors must be accurately located so that when rails are secured to them, the rails will be plumb, at correct heights, equally spaced, and correct distance from center of tank.

There will be nine column supports or piers equally spaced around the tank and formed by increasing the thickness of the tank wall at the points required so as to form rectangular piers 32 inches wide radially and 24 inches circumferentially. Piers will extend, full size, down to thickest part of tank wall. Each pier will have built into it four anchor bolts, the shortest being six feet, and the longest seven feet, but not more than two bolts in the same pier shall be of the same length.

There will be a center pier of brick into which will be built four anchor bolts as shown in the drawings furnished.

Coping: The tank wall will be provided with a
1356 & 1357 coping of cement concrete six inches in thickness overhanging the wall two inches on the outside, said coping also covering in the same manner the column supports or piers and forming the footings for the columns, which footings must be truly flat and level with each other on the top surfaces. The top of the center pier must also have a similar concrete coping.

Over-flow: In wall of tank at top will be built a piece of three inch pipe inside bottom of pipe to be four inches below top of wall coping.

Landing Stones: There will be 18 landing stones evenly spaced around the tank bottom as shown in the drawings. These may be either of natural stone or cement concrete and must all have flat and true top faces, all at the same level 22 feet 2 inches from top of tank coping.

Filling: As the tank wall is built, the contractor must fill in the space outside the wall and thoroughly tamp dirt into place.

General: All iron work required in the masonry tank, including anchor bolts, wall brackets, bolts for column supports, I beams for reinforcements, will be furnished by the Gas Company, but will be placed by the contractor. All gas pipe and connections will be furnished and placed by the Gas Company.

[Endorsed:] Masonry tank for East Lincoln Holder 1910.

1358 *Contract for Excavation.*

This agreement made and concluded this ——— day of —— in the year One Thousand Nine Hundred and Ten between the Lincoln Gas & Electric Light Company, party of the first part, and Robert Malone, party of the second part;—

Witnesseth, that for and in consideration of the payment of Seventy Cents ($.70) per cubic yard to be made by the party of the first part, the party of the second part agrees with said party of the first part to furnish all necessary tools and labor and to do all excavating for a masonry tank for a gas holder on the property of the Lincoln Gas & Electric Light Company, party of the first part, in accordance with plans furnished and in conformity with the specifications hereto attached.

The party of the second part further agrees in consideration hereof to start upon the work at once and to finish the same within a reasonable time considering the character and extent of work to be done.

In witness whereof the parties to these presents have hereunto set their hands, the year and day first above written.

LINCOLN GAS & ELECTRIC LIGHT CO.,

By —— ——.

ROBERT MALONE.

1359–1620 *Specifications for Excavation.*

The excavation shall be made in such a manner as to remove or disturb the least amount of earth outside of tank walls in order to retain as much as possible its resisting power to reinforce the tank wall, and no excavation will be allowed below levels on which foundations will rest.

In addition to the main excavation for the tank, there will be excavations for the inlet and outlet pipes at points on the circumference to be designated by the engineer of the company.

All dirt excavated shall be placed by the contractor upon the property of the Lincoln Gas & Electric Light Company located immediately east of and adjacent to the holder site.

1621 *Occupation Tax Ordinance Amendment.*

1625 Section 52. Such schedule shall have attached the following interrogatories which the person required to list property shall answer over his signature and under oath:

Interrogatory 1. Are you, or were you on the first day of April of the present year the executor of the last will or the administrator of the estate of any deceased person or the guardian of the estate of any infant or person of unsound mind, or the trustees of the property of any person, or the receiver of any corporation, association or firm, or the agent, attorney, or banker investing, loaning or otherwise controlling the money or the property of any person, or the president or accounting officer of any corporation, or a partner, con*d*ignee, or pawnbroker.

If yes, designate for whom you were then, or now are acting in such representative or fiduciary capacity; and if you were or now are acting under the authority of any particular court, name the court, and also state to what court you report.

Answer. No.

Interrogatory 2. Have you since the first day of April of last year, either personally or through the agency of others, caused all or any

part of your taxable property or other property to be temporarily converted either be sale, loan, exchange, or in any other manner, into bonds or other securities of the United States not taxable, or any other property not taxable, with the intention to pay back, return, exchange, or dispose of such property after you have made out your tax statement? Or did you on or before the first day of April of the present year, and before you saw this interrogatory, pay back, return, exchange, or dispose of any such property for the purpose aforesaid

Answer. No.

Interrogatory 3. If you have converted any of your money or property or money or property of any other person as inquired of you, then state when the same was so converted or invested, and the time and amount of value thereof?

Answer. No.

Interrogatory 4. Have you at any time since the first day of April in the preceding year, withdrawn from any bank any moneys there deposited, for the purpose of converting the same into some form of non-taxible property, or for the purpose of sending the same out of the state, or transferring the same to some other person or persons, with the intent to or purpose of, evading the payment of tax on the same?

Answer. No.

STATE OF NEBRASKA,
*Lancaster County, ss*:

I, Homer Honeywell, being duly sworn, say that the foregoing statement and schedule is true and contains a full and complete list of all property held by or belonging to me on the first day of April including all personal property pertaining to merchandising, whether held in actual possession or having been purchased with a view to possession or profit, and all personal property appertaining to manufacturing, and all manufactured articles, whether on hand or owned by me. In all cases where I have been unable to exhibit certain classes of property to the assessor, such property has been fully and fairly described, and its true condition represented, and I have in no case sought to mislead the assessor as to the quan-ity or quality of the property. I further swear that, since the first day of April of last year I have not directly or indirectly converted or exchanged any of my property temporarily, for the purpose of evading the assessment thereof for taxes, into non-taxable property or securities of any kind, or transferred or transmitted the same to any person or in any wise for the purpose of evading the assessment thereof, and that my
1626 answers to the foregoing interrogatories are true. So help me God.

(Signed) HOMER HONEYWELL.

Subscribed in my presence, and sworn to before me this — day of —, 190—.

_____

*Deputy Assessor, Lancaster Co., Nebr.*

1959

*Extracts from Revenue Law.*

Section 12. All property in this state not expressly exempt therefrom shall be subject to taxation.

Section 13. Exemptions.

No Property is Exempt from Taxation Except:

First. All property of the state, counties and municipal corporations.

Second. Such other property as may be used exclusively for agricu-tural and horticultural societies, for schools, religious, cemetery and charitable purposes. In the assessment of real estate, encumbered by public easement, any depreciation, occasioned by such easement shall be deducted in the valuation of such property. The increased value of lands by reason of live fences, and forest trees grown and cultivated thereon, shall not be taken into account in the assessment thereof.

Section 28. Personal Property shall be listed in the manner following:

First. Every person of full age and sound mind, being a resident of this state, shall list all his moneys, credits, bonds or stocks, shares of stock of joint stock of other companies, when the capital stock of such companies is not assessed in this state, moneys loaned or invested, annuities, franchises, royalties and all other personal property.

Second. He shall also list all moneys and other personal property invested, loaned or otherwise controlled by him as the agent or attorney, or on account of any other person or persons, company or corporation whatsoever, and all moneys deposited subject to his order, check or draft, and credits due from any person or persons, body corporate or politic; whether in or out of the county.

Third. The property of a minor child shall be listed by his guardian; if he have no guardian, then by the father, if living; if not, by the mother, if living; and if neither father nor mother be living, by the person having such property in charge.

Fourth. The property of any other person under guardianship, by his guardian, or if he have no guardian, by the person having charge of such property.

Fifth. The property of a wife, by her husband, if of sound mind; if not, by herself.

Sixth. The property of a person for whose benefit it is held in trust by the trustee; of the estate of a deceased person by the executor or administrator.

Seventh. The property of corporations whose assets are in the hands of receivers, by such receivers.

Eighth. The property of corporations by the president or proper agent or officer thereof.

Ninth. The property of manufacturers and others in the hands of an agent, by and in the name of such agent, as merchandise, and (Sec. 32) shall be listed and assessed at the place where the business of such agent is carried on.

Section 35. All improvements put on leased grounds shall be assessed to the owner of such improvements as personal property.

Section 53. If any person shall make a false or fraudulent list, schedule or statement, required by this act, or shall willfully fail or refuse to deliver to the assessor, when called upon for that purpose, a list of taxable property which under this act is required to be listed or shall temporarily convert any part of such property into
1627 property not taxable for the purpose of preventing such property from being listed and of evading the payment of taxes thereon, or shall transfer or transmit any property to any person with such intent, he shall be guilty of misdemeanor and subject to a fine of not less than fifty dollars and not more than two thousand dollars. And if any person shall knowingly swear falsely regarding any matter contained in such schedule or interrogatories, he shall be deemed guilty of perjury and punished accordingly.

Section 54. It shall be the duty of the State Board of Equalization and Assessment, all county boards, county assessors and deputy assessors, to notify the county attorney of the proper county, of all willful violations of the provisions of this act known to them or any of them; and to sign and certify complaints and informations with respect thereto when prepared by the county attorney.

Section 55. In every case where any person shall refuse to make out and deliver to the proper deputy assessor the statement required under this act or shall refuse to make and subscribe to any of the oaths or affirmations required, the deputy assessor shall proceed to ascertain the number of each description of the several enumerated articles of property and the value thereof; and such deputy assessor shall make a note of such refusal in a column opposite the person's name, and the county assessor shall add to such valuations, when returned by the deputy, fifty percentum of the value returned.

Section 57. For the purpose of determining the true value of the stock of any merchant or manufacturer, the assessor shall have the right to demand of such manufacturer, or merchant an inspection of his inventories and all book accounts for the preceding year, including the annual invoice and inventory of stock made by such merchant or manufacturer last preceding such assessment and the policies of insurance carried by such merchant or manufacturer on his stock for the year next preceding his assessment.

LINCOLN, NEBR., June 9, 1906.

I certify that I have valued the property and franchise of the Lincoln Gas and Electric Light Company in Lancaster County Nebraska as $663,400.00 and assessed it at $132,680.00 apportioned as follows:

Real Estate $12,000.00.
Personal $120,680.00.

J. R. C. MILLER,
*County Assessor.*

Public Utility Corporations, Lancaster County, Nebraska.

APRIL 27th, 1906.

To Lincoln Gas and Electric Light Company:

Under Section 68, Chapter 77, Compiled Statutes, 1903, you are required, in addition to the other property required to be listed, to make out and deliver to the Deputy Assessor a sworn statement as per schedule attached, for municipal taxation for 1906.

1628 1. Name of Company: Lincoln Gas and Electric Light Company. Location: Lincoln, Nebraska, 1323 O Street.

2. Capital Stock authorized: $2,250,000.00. Number of shares: 22,500.

3. Capital stock paid up: $2,250,000.00.

4. Market value of shares of stock—nothing. Actual value of shares of stock—nothing.

5. The true value of franchise $60,000.00. Granted by the City of Lincoln.

6. Total amount of indebtedness $1,129,600.00. Except current expenses, excluding from expenses the amount paid for the purchase and improvement of property.

7. The amount of capital on which a dividend was declared during 1905 —.

8-9. The amount of capital on which a dividend declared during said year ending December 31, 1905 none.

10. The total amount of each dividend declared during the year ending December 31, 1905. None.

11. Gross earnings during said year $264,671.65.

12. Net earnings during said year $34,207.31.

Section 52. Such schedule shall have attached the following interrogatories which the person required to list the property shall answer in writing over his signature and under oath:

Interrogatory 1. Are you, or were you, on the first day of April of the present year the executor of the last will or the administrator of the estate of any deceased person or the guardian of the estate of any infant or person of unsound mind, or the trustee of the property of any person, or the receiver of any corporation, association
1632 or firm or the agent, attorney or banker investing, loaning or otherwise controlling the money or the property of any person, or the president or accounting officer of any corporation, or a partner, consignee, or pawn broker.

If yes, designate for whom you were then, or now are, acting in such representative or fiduciary capacity; and if you were or now are acting under the authority of any particular court, name the court, and also state to what court you report.

Answer. ——.

Interrogatory 2. Have you since the first day of April of last year either personally or through the agency of others, caused all or any part of your taxable property or other property to be temporarily

converted either by sale, loan, exchange, or in any other manner, into bonds or other securities of the United States not taxable or any other property not taxable, with the intention to pay back, return, exchange or dispose of such property after you have made out your tax statement? Or did you on or before the first day of April of the present year, and before you saw this interrogatory, pay back, return, exchange, or dispose of any such property for the purpose aforesaid?

Answer. ——.

Interrogatory 4. Have you at any time since the first day of April in the preceding year, withdrawn from any bank any moneys there deposited for the purpose of converting the same into some form of non-taxable property, or for the purpose of sending the same out of the state, or transferring the same to some other person or persons, with the intent to or purpose of, evading the payment of tax on the same?

Answer. ——.

Interrogatory 3. If you have converted any of your money or property or money or property of any other person as inquired of you, then state when the same was so converted or invested, and the time and amount of value thereof?

Answer. ——.

STATE OF NEBRASKA,
*Lancaster County, ss:*

I, —— —— being duly sworn, say that the foregoing statement and schedule is true and contains a full and complete list of all property held by or belonging to me on the first day of April including all personal property pertaining to merchandising, whether held in actual possession or having been purchased with a view to possession or profit and all personal *pertertu* appertaining to manufacturing, and all manufactured articles, whether on hand or owned by me. In all cases where I have been unable to exhibit certain classes of property to the assessor, such property has been fully and fairly described, and its true condition represented, and have in no case sought to mislead the assessor as to the quantity or quality of the property. I further swear that, since the first day of April of last year I have not directly or indirectly converted or exchanged any of my property temporarily, for the purpose of evading the assessment thereof for taxes, into non-taxable property or securities of any kind, or transferred or transmitted the same to any person or in any wise for the purpose of evading the assessment thereof, and that my answers to the foregoing interrogatories are true So help me God.

(Signed) —— ——.

*Extracts from Revenue Law.*

Section 12. All property in this state not expressly exempt therefrom shall be subject to taxation.

Section 13. Exemptions.

No property is exempt from taxation except:

First. All Property of the state, counties and municipal corporations.

Second. Such other property as may be used exclusively for agricultural and horticultural societies, for schools, religious, cemetery and charitable purposes. In the assessment of real estate, encumbered by public easement, any depreciation occasioned by such easement shall be deducted in the valuation of such property.

1633 The increased value of lands by reason of live fences, and forest trees grown and cultivated thereon shall not be taken into account in the assessment thereof.

Section 28. Personal Property shall be listed in the manner following:

First. Every person of full age and sound mind; being a resident of this state, shall list all his moneys, credits, bonds or stocks, shares of stock of joint stock of other companies, when the capital stock of such companies is not assessed in this state, moneys loaned or invested, annuities, franchises, royalties and all other personal property.

Second. He shall also list all moneys and other personal property invested, loaned or otherwise controlled by him as the agent or attorney or on account of any other person or persons, company or corporation whatsoever, and all moneys deposited subject to his order, check or draft and credits due from any person or persons, body corporate or politic whether/ in or out of the county.

Third. The property of a minor child shall be listed by his guardian; if he have no guardian, then by the father, if living; if not by the mother, if living, and if neither father nor mother be living, by the person having such property in charge.

Fourth. The property of any other person under guardianship; by his guardian, or if he have not a guardian, by the person having such property in charge.

Fifth. The property of a wife, by her husband, if of sound mind; if not, by herself.

Sixth. The property of a person for whose benefit it is held in trust by the trustee of the estate of a deceased person by the executor or administrator.

Seventh. The property of corporations whose assets are in the hands of receivers, by such receivers.

Eighth. The property of corporations by the president or proper agent or officer thereof.

Ninth. The property of a firm or company, by a partner or agent thereof.

Tenth. The property of manufacturers and others in the hands of an agent, by and in the name of such agent, as merchandise, and (Sec. 32) shall be listed and assessed at the place where the business of such agent is carried on.

Section 35. All improvements put on leased grounds shall be assessed to the owner of such improvements as personal property.

Section 53. If any person shall make a false or fraudulent list, schedule or statement, required by this act, or shall willfully fail

or refuse to deliver to the assessor, when called upon for that purpose, a list of taxable property which under this act is required to be listed or shall temporarily convert any part of such property into property not taxable for the purpose of preventing such property from being listed and of evading the payment of taxes thereon, or shall transfer or transmit any property to any person with such intent, he shall be guilty of misdemeanor and subject to a fine of not less than fifty dollars and not more than two thousand dollars. And if any person shall knowingly swear falsely regarding any matter contained in such schedule or interrogatories, he shall be deemed guilty of perjury and punished accordingly.

Section 54. It shall be the duty of the State Board of Equalization and Assessment, all county boards, county assessors and deputy assessors, to notify the county attorney of the proper county, of all willful violations of the provisions of this act known to them or any of them; and to sign and verify complaints and informations with respect thereto when prepared by the county attorney.

Section 55. In every case where any person shall refuse to make out and deliver to the proper deputy assessor the statement required under this act, or shall refuse to make and subscribe to any of the oaths or affirmations required, the deputy assesser shall proceed to ascertain the number of each description of the several enumerated articles of property and the value thereof; and such deputy
1634 assessor shall make a note of such refusal in a column opposite the person's name, and the county assessor shall add to such valuations, when returned by the deputy, fifty per centum of the value thereof returned.

Section 57. For the purpose of determining the true value of the stock of any merchant or manufacturer, the assessor shall have the right to demand of such merchant or manufacturer an inspection of his inventories and all books of account for the preceding year, including the annual inventory and invoice of stock made by such merchant or manufacturer last preceding year and the policies of insurance carried by such merchant or manufacturer on his stock for the year next preceding his assessment.

I hereby certify that I have valued the property and franchise of the Lincoln Gas and Electric Light Company in Lancaster County, Nebraska, at $1,129,600. Setting aside $80,000 for Real Estate separately assessed and assessed the remaining $1,049,600 at $209,920.

J. R. C. MILLER,
*Assessor.*

*Public Utility Corporation.*

Lancaster County, Nebraska.

LINCOLN, NEBR., June 6, 1908.

Section 52. Such schedule shall have attached the following interrogatories which the person required to list property shall answer in writting over his signature and under oath:

Interrogatory 1. Are you, or were you, on the first day of April of the present year the executor of the last will or the administrator of the estate of any deceased person of the guardian of the estate of any infant or person of unsound mind, or the trustee of the property of any person, or the receiver of any corporation, association or firm or the agent, attorney, or banker investing, loaning or otherwise controlling the money or the property of any person, or the president or accounting officer of any corporation, or a
1639 partner, consignee or pawn broker.

If yes, designate for whom you were then, or now are, acting in such representative or fiduciary capacity; and if you were or now are acting under the authority of any particular court, name the Court, and also state to what court you report.

Answer. No.

Interrogatory 2. Have you since the first day of April of last year, either personally or through the agency of others, caused all or any part of your taxable property or other property to be temporarily converted either by sale, loan, exchange, or in any

other manner, into bonds or other securities of the United States, not taxable or any other property not taxable, with the intention to pay back, return exchange, or dispose of such property after you have made out your tax statement? Or did you on or before the first day of April — the present year, and before you saw this interrogatory, pay back, return, exchange or dispose of any such property for the purpose aforesaid?

Answer. No.

Interrogatory 3. If you have converted any of your money or property or money or property of any other person as inquired of you, then state when the same was so converted or invested, and the time and amount of value of same?

Answer. No.

Interrogatory 4. Have you at any time since the first day of April in the preceding year, withdrawn from any bank any moneys there deposited for the purpose of converting the same into some form of non-taxable property, or for the purpose of sending the same out of the state, or transferring the same to some other person or persons with the intent to or purpose of evading the payment of tax on the same?

Answer. No.

STATE OF NEBRASKA,
*Lancaster County, ss:*

I, Harry Warner being duly sworn, say that the foregoing statement and schedule is true and contains a full and complete list of all propertu held by or belonging to me on the first day of April including all property pertaining to merchandising, whether held in actual possession by me. In all cases where I have been unable to exhibit certain classes of property to the assessor, such property has been fully and fairly described, and its true condition represented, and have in no case sought to mislead the assessor as to the quantity or quality of the property. I further swear that, since the first day of April of last year I have not directly or indirectly converted or exchanged any of my property temporarily, for the purpose of evading the assessment thereof for taxes, into non-taxable property or securities of any kind or transferred or transmitted the same to any person or in any wise for the purpose of evading the assessment thereof, and that my answers to the foregoing interrogatories are true, So help me God.

(Signed) HARRY WARNER.

Subscribed in my presence and sworn to before me this — day of — 1908.

—— ——,
*Deputy County Assessor.*

*Extracts from Revenue Law.*

Section 12. All property in this state not expressly exempt therefrom shall be subject to taxation.

Section 13. Exemptions.

No Property is exempt from taxation except

First. All property of the state, counties and municipal corporations.

Second. Such other property as may be used exclusively for agricultural and horticultural societies, for schools, religious, cemetery and charitable purposes. In the assessment of real estate,
1640 encumbered by public easement, any depreciation occasioned by such easement shall be deducted in the valuation of such property. The increased value of lands by reason of live fences, and forest trees grown and cultivated thereon shall not be taken into account in the assessment thereof.

Section 28. Personal property shall be listed in the manner following:

First. Every person of full age and sound mind, being a resident of this state, shall list all his moneys, credits, bonds or stocks, shares of stock or joint stock of other companies, when the capital stock of such companies in not assessed in this statem moneys loaned or invested, annuities, franchises, royalties and other personal property.

Second. He shall also list all moneys and other personal property invested, loaned or otherwise controlled by him as the agent or attorney, or on account of any other person or persons, company or corporation whatsoever, and all moneys deposited subject to his order, check, or draft, and credits due from any person or persons, body corporate or politic; whether in or out of the county.

Third. The property of a minor child shall be listed by his guardian; if he have no guardian, then by the father, if living; if not, by the mother, if living, and if neither father nor mother be living; by the person or persons having such property in charge.

Fourth. The property of any other person under guardianship, by his guardian; or if he have not a guardian, by the person having charge of such property.

Fifth. The property of a wife, by her husband, if of sound mind; if not by herself.

Sixth. The property of a person for whose benefit it is held in trust by the trustee; of the estate of a deceased person by the executor or administrator.

Seventh. The property of corporations whose assets are in the hands of receivers, by such receivers.

Eighth. The property of corporations by the president or proper agent or officer thereof.

Ninth. The property of a firm or company, by a partner or agent thereof.

Tenth. The property of a manufacturer and others in the hands of an agent, by and in the name of such agent, as merchandise,

and (sec. 32) shall be listed and assessed at the place where the business of such agent is carried on.

Section 35. All improvements put on leased grounds shall be assessed to the owner of such improvements as personal property.

Section 53. If any person make a false or fraudulent list, schedule or statement required by this act, or shall willfully fail or refuse to deliver to the assessor, when called upon for that purpose, a list of the taxable property which under this act is required to be listed, or shall temporarily convert any part of such property into property not taxable for the fraudulent purpose of preventing such property from being listed and of evading the payment of taxes thereon, or shall transfer or transmit any property to any person with such intent, he shall be guilty of a misdemeanor and subject to a fine of not less than fifty dollars and not more than two thousand dollars. And if any person shall knowingly swear falsely regarding any matter contained in such schedule or interrogatories, he shall be deemed guilty of perjury and punished accordingly.

Section 54. It shall be the duty of the State Board of Equalization and Assessment, all county boards, county assessors and deputy assessors, to notify the county attorney of the proper county, of all willful violations of the provisions of this act known to them or any of them; and to sign and verify complaints and informations with respect thereto when prepared by the County Attorney.

1641 Section 55. In every case where any person shall refuse to make out and deliver to the proper deputy county assessor the statement required under this act, or shall refuse to make and subscribe to any of the oaths or affirmations required, the deputy assessor shall proceed to ascertain the number of each description of the several enumerated articles of property and the value therof; and such deputy assessor shall make a note in a column opposite the person's name, and the county assessor shall add to such valuation, when returned by the deputy, fifty per centum of the value returned.

Section 57. For the purpose of determining the true value of the stock of any merchant or manufacturer, the assessor shall have the right to demand of such merchant or manufacturer, an inspection of his inventories and all books of account for the preceding year, including the annual invoice and inventory of stock made by such merchants or manufacturer last preceding such assessment, and the policies of insurance carried by such merchant or manufacturer on his stock for the year next preceding his assessment.

LINCOLN, NEBR., June 6, 1908.

I hereby certify that I have valued the personal property and franchise of the Lincoln Gas and Electric Light Company at $792,800.00 the real estate being $57,200.00 making a total value of $850,000.00.

Personal property valuation $792,800.00 assessed value $158,560.00.

D. R. C. MILLER,
*Assessor.*

Public Utility Corporations,
Lancaster County, Nebraska.

April 20, 1908.

To Lincoln Gas and Electric Light Company:

Under Section 68, Chapter 77, Compiled Statutes, 1903, you are required, in addition to the other property required to be listed, to make out and deliver to the Deputy Assessor a sworn statement as per schedule attached, for municipal taxation for 1908.

1. Name of the Company Lincoln Gas & Electric Light Company.
2. Location 1323 O St., Lincoln, Nebr.
2. Capital stock authorized $2,250,000.00.

Sec. 52. Such schedule shall have attached the following interrogatories which the person required to list property shall answer in writing over his signature and under oath:

Interrogatory 1. Are you, or were you, on the first day of April of the present year the executor of the last will or the administrator of the estate of any deceased person or the guardian of the estate of any infant or person of unsound mind, or the trustee of the property of any person, or the receiver of any corporation, association or firm, or the agent, attorney, or banker investing, loaning or otherwise controlling the money or the property of any person, or the president or accounting officer of any corporation, or a partner, consignee, or pawnbroker?

If yes, designate for whom you were then, or now are,
1647 acting in such representative or fiduciary capacity, and if you were or now are acting under the authority of any particular court, name the Court, and also state to what court you report.

Answer. No.

Interrogatory 2. Have you since the first day of April of last year, either personally or through the agency of others, caused all or any

part of your taxable property or other property to be temporarily converted either by sale, loan, exchange, or in any other manner, into bonds or other securities of the United States, not taxable or any other property not taxable, with the intention to pay back, return, exchange or dispose of such property after you have made out your tax statement? Or did you on or before the first day of April the present year, and before you saw this interrogatory, pay back, return, exchange, or dispose of any such property for the purpose aforesaid?

Answer. No.

Interrogatory 3. If you have converted any of your money or property or money or property of any other person as inquired of you, then state when the same was so conveyed or invested, and the time and amount of value thereof.

Answer. No.

Interrogatory 4. Have you at any time since the first day of April in the preceding year, withdrawn from any bank any moneys there deposited for the purpose of converting the same into some form of non-taxable property, or for the purpose of sending the same out of the state, or transferring the same to some other person or persons, with the intent to or purpose of, evading the payment of tax on the same?

Answer. No.

STATE OF NEBRASKA,
*Lancaster County, ss:*

I, Harry Warner, Secretary of the Lincoln Gas and Electric Light Company being duly sworn, say that the foregoing statement and schedule is true and contains a full and complete list of all property held by me or belonging to me on the first day of April including all personal property pertaining to merchandising, whether held in actual possession or having been purchased with a view to possession or profit, and all personal property appertaining to manufacturing, and all manufactured articles, whether on hand or owned by me. In all cases where I have been unable to exhibit certain classes of property to the assessor, such property has been fully and fairly described, and its true condition represented, and have in no case sought to mislead the assessor as to the quantity or quality of the property, I further swear that, since the first day of April of last year I have not directly or indirectly converted or exchanged any of my property temporarily, for the purpose of evading the assessment thereof for taxes, into non-taxable property or securities of any kind, or transferred or transmitted the same to any person or in any wise for the purpose of evading the assessment thereof, and that my answers to the foregoing interrogatories are true. So help me God.

(Signed) HARRY WARNER.

Subscribed in my presence and sworn to before me this 2nd day of June 1909.

D. H. McCLENAHAN.

*Certificate of Assessment.*

I hereby certify that I have assessed the foregoing personal property this 2nd day of June 1909 at its fair cash value, as indicated in the column provided, to the best of my knowledge and belief.

D. H. McCLENAHAN.

1648 *Extracts from Revenue Law.*

Section 12. All property in this state not expressly exempt therefrom shall be subject to taxation.

Section 13. Exemptions.

No Property is Exempt From Taxation Except:

First. All property of the state, counties and municipal corporations.

Second. Such other properties as may be used exclusively for agricultural and horticultural societies, for schools, religious, cemetery and charitable purposes. In the assessment of real estate, encumbered by public easement, any depreciation occasioned by such easement shall be deducted in the valuation of such property. The increased value of lands by reason of live fences, and forest trees grown and cultivated thereon shall not be taken into account in the assessment thereof.

Section 28. Personal property shall be listed in the manner following:

First. Every person of full age and sound mind, being a resident of this state, shall list all his moneys, credits, bonds or stocks, shares of stock or joint stock of other companies, when the capital stock of such companies is not assessed in this state, moneys loaned or invested annuities, franchises, royalties and other personal property.

Second. He shall also list all moneys and other personal property invested, loaned or otherwise controlled by him as the agent or attorney, or on account of any other person or persons, company or corporation whatsoever, and all moneys deposited subject to his order, check, or draft, and credits due from any person or persons, body corporate or politic; whether in or out of the county.

Third. The property of a minor child shall be listed by his guardian if he have no guardian, then by the father, if living, if not, by the mother, if living, and if neither father nor mother be living, by the person having such property in charge?

Fourth. The property of any other person under guardianship, by his guardian; or if he have no guardian, by the person having charge of such property.

Fifth. The property of a wife, by her husband, if of sound mind; if not by herself.

Sixth. The property of a person for whose benefit it is held in trust by the trustee; of the estate of a deceased person by the executor or administrator.

Seventh. The property of corporations whose assets are in the hands of receivers, by such receivers.

Eighth. The property of corporations by the president or proper agent or officer thereof.

Ninth. The property of a firm or company, by a partner or agent thereof.

Tenth. The property of manufacturers and others in the hands of an agent, by and in the name of such agent, as merchandise and (Sec. 32) shall be listed and assessed at the place where the business of such agent is carried on.

Section 35. All improvements put on leased grounds shall be assessed to the owner of such improvements as personal property.

Section 53. If any person shall make a false or fraudulent list, schedule or statement required by this act, or shall willfully fail or refuse to deliver to the assessor, when called upon for that purpose, a list of the taxable property which under this act is required to be listed or shall temporarily convert any part of such property into property not taxable for the fraudulent purposes of preventing such property from being listed and of evading the payment of taxes thereon, or shall transfer or transmit any property to any person with such intent, he shall be guilty of a misdemeanor and subject to a fine of not less than fifty dollars and not more than two thousand dollars. And if any person shall knowingly swear falsely regarding any matter contained in such schedule or interrogatories, he shall be deemed guilty of perjury and punished accordingly.

1649 Section 54. It shall be the duty of the State Board of Equalization and Assessment, all county boards, county assessors, and deputy assessors to notify the county attorney of the proper county, of all willful violations of the provisions of this act known to them or any of them; and to sign and verify complaints and informations with respect thereto when prepared by the county attorney.

Section 55. In every case where any person shall refuse to make out and deliver to the proper deputy assessor the statement required under this act, or shall refuse to make and subscribe to any of the oaths or affirmations required, the deputy assessor shall proceed to ascertain the number of each description of the several enumerated articles of property and the value thereof; and such deputy assessor shall make note of such refusal in a column opposite the person's name and the county assessor shall add to such valuations, when returned by the deputy, fifty per centum of the value returned.

Section 57. For the purpose of determining the true value of the stock of any merchant or manufacturer, the assessor shall have the right to demand of such merchant or manufacturer, an inspection of his inventories and all books of account for the preceding year, including the annual inventory of stock made by such merchant or ma*un*facturer last preceeding such assessment, and the policies of insurance carried by such merchant or manufacturer on his stock *of*r the year next preceding his assessment.

I hereby certify that I have this day valued the personal property and franchise of the Lincoln Gas and Electric Light Company in

Lincoln, Lancaster County, Nebraska, at $793,525 after deducting $56,475 for real estate and assessed the personal property and franchise at $158,705.

(Signed) D. R. C. MILLER,
*County Assessor.*

Lincoln $158,705. School District #1 $158,705.

1650 Public Utility Corporations,

Lancaster County, Nebraska.

April 10, 1909.

To Lincoln Gas and Electric Light Company:

Under section 68, Chapter 77, Compiled Statutes, 1903, you are required, in addition to the other property required to be listed, to make out and deliver to the Deputy Assessor a sworn statement as per schedule attached, for municipal taxation for 1909.

1. Name of Company, Lincoln Gas & Electric Light Company. Location, Lincoln, Nebr.
2. Capital stock authorized $2,250,000.00. Number of shares, 22500.
3. Capital stock paid up, $2,250,000.00.
4. Market value of shares of stock—not known.
5. Actual value of shares of stock—not known.
5. True value of Franchise —. Granted by City of Lincoln.
6. Total amount of indebtedness, $1,129,600.00 (except for current expenses, excluding from expense the amount paid for purchase and improvement of property).
7. The amount of capital on which a dividend was declared during 1908 —.
8-9. The date and rate of each dividend declared during the year ending December 31, 1908 —.
10. The total amount of each dividend declared during the said year ending December 31, 1908 —.
11. Gross earning during said year, $363,631.20.
12. Net earning during said year, $64,437.65.
13. Amount of surplus, none.
14. Amount of profit added to sinking fund during said year, none.
15. Maximum price at which shares of stock sold during said year, not known.
16. Minimum price at which shares of stock sold during said year, not known.
17. Average price at which shares of stock sold during said year, not known.
18. We, Harry Warner, Secretary and Treasure-, officers having full knowledge of the finances and accounts of the said Company,

1651 being Secretary and Treasurer of the Lincoln Gas & Electric Light Company being duly sworn, do say that the statements made above are true and correct.

(Signed) HARRY WARNER.

Subscribed in my presence and sworn to before me this 2nd day of June, 1909.

1910 *Schedule of Personal Property.*

(Extracts and Deductions from Revenue Law.)

Sec. 15 (property exempt). The following property shall be exempt from taxes:

First. All property of the state, counties, and municipal corporations.

Second. Such other property as may be used exclusively for agricultural and horti cultural societies, for schools, religious, cemetery and charitable purposes. In the assessment of real estate, encumbered by a public easement, any depreciation occasioned by
1655 such easement shall be deducted in the valuation of such property. The increased value of lands by reason of live fences, forest trees grown and cultivated thereon, shall not be taken into account in the assessment thereof.

Sec. 28 (Personalty, by whom listed). Personal property shall be listed in the manner following:

First. Every person of full age and sound mind, being a resident of the state, shall list all his moneys, credits, bonds or stocks, shares of stock of joint stock or other companies when the capital stock of such company is not assessed in this state, moneys loaned or invested, annuities, franchises, royalties, and all other personal property.

Second. He shall also list all moneys and all other personal property invested, loaned or otherwise controlled by him as the agent or attorney or on account of any other person or persons, company, or corporation whatsoever, and all moneys deposited subjected to his order, check or draft, and credits due from any other person or persons, body corporate or public, whether in or out of the county.

Third. The property of a minor child shall be listed by his guardian; if he have no guardian, then by the father, if living; if not by the mother, if living, and if neither father nor mother be living; by the person having such property in charge.

Fourth. The property of any other person under guardianship, by his guardian; or if he has no guardian, by the person having charge of such property.

Fifth. The property of the wife, by her husband, if of sound mind; if not, by herself.

Sixth. The property of a person for whose benefit it is held in trust, by the trustee; of the estate of a deceased person, by the executor or administrator.

Seventh. The property of corporations whose assets are in the hands of receivers, by such receivers.

Eighth. The property of corporations, by the president or proper agent or officer thereof.

Ninth. The property of manufacturers and others in the hand of an agent, by and in the name of such agents, as merchandise.

Tenth. The property of firm or company, by a partner or agent thereof.

1656 Sec. 53. (Violation of acts as to listing.—Penalty.) If any person shall make a false or fraudulent list, schedule or statement, required by this act, or shall willfully fail or refuse to deliver to the assessor when called upon for that purpose, a list of the taxable property which under this act is required for that purpose, or shall temporarily convert any part of such property into property not taxable, for the fraudulent purpose of preventing such property from being listed and of evading the payment of taxes thereon, or shall transfer or transmit any property to any person with such intent, he shall be guilty of a misdemeanor and subject to a fine of not less than fifty dollars and not more than two thousand dollars. And if any person shall knowingly swear falsely regarding any matter contained in such schedule or interrogatories, he shall be deemed guilty of perjury and be punished accordingly.

Sec. 54. (Same.—Duty of State Board in Prosecutions.) It shall be the duty of the State Board of Equalization and Assessment, all county boards, county assessors and deputy assessors, to notify the county attorney of the proper county, of all willful violations of the provisions of this act known to them, and to sign and verify complaints and information with respect thereto when prepared by the county attorney.

Sec. 55. (Refusal to list.) In every case where any person refuse to make out and deliver to the proper deputy assessor the statement required under this act, or shall refuse to make and subscribe to any of the oaths or affirmations required, the deputy assessor shall proceed to ascertain the number of each description of the several enumerated articles of property and the value thereof; and such deputy shall make a note of such refusal in a column opposite the persons name, and the county assessor shall add to such valuation, when returned by the deputy assessor, fifty per centum of the value returned.

For exemption see section 13.

Sec. 52. (Interrogatories—Verifications.) Such schedule shall have attached the following interrogatories which the person required to list property shall answer in writing over his signature and under oath:

Interrogatory 1. Are you, or were you, on the first day of April of the present year, the executor of the last will, or the administrator of the estate of any deceased person, or the guardian of the estate of any infant or person of unsound mind, or the trustee of the property of any person, or the receiver of any corporation, association, or firm or the agent, attorney, or banker investing, loaning or otherwise controlling the money or the property of any person, or the president or accounting officer of any corporation, or a partner, consignee, or pawnbroker? If yes, designate for whom you were then, or now are, acting in such representative or fiduciary capacity, and if you were or now are acting under the authority of any particular court name the court and also state to what Court you report? Answer. No.

Interrogatory 2. Have you since the first day of April of last year, either personally or through the agency of others caused all or any part of your taxable property or other property to be temporarily

converted either by sale, loan or exchange, or in any other manner, into property not taxable, with the intentions to pay back, return, exchange or dispose of such property after you have made out your tax statement? Or did you on or before the first day of April of the present year, and before you saw this interrogatory, pay back, return, exchange, or dispose of any such property for the purpose aforesaid? Answer. No.

Interrogatory 3. If you have converted any of your property or money or property of any other person, as inquired of you, then state when same was so converted or invested, and the time and amount or value of it. Answer. No.

Interrogatory 4. Have you, at any time since the first day of April in the preceding year, withdrawn from any bank any moneys there deposited for the purpose of converting the same into some form of non-taxable property, or for the purpose of sending the same out of the state, or transferring the same to some other person or persons, with the intent to, or purpose of evading the payment of tax on the same? Answer. No.

1657 LINCOLN, NEBR., May 24, 1910.

I hereby certify that I have valued the property and franchise of the Lincoln Gas and Electric Light Co., at $1,184,250, setting aside $65,375 for real estate and assessed the remainder at $223,775 the same being apportioned as follows:

1900 *Construction.*

| | |
|---|---|
| The items on pages 574-575-576 & 577 U. S. Supreme Court Record aggregate (less credits) | 17,134.65 |
| On page 702 Ledger (no number) appear certain postings charged to Gas Construction in October 1900 aggregating (less credits) | 4,313.79 |
| Making the total charges | 21,448.44 |
| The total carried at the close of 1900 in U. S. S. C. Record is | 22,538.31 |
| Amount in excess of items | 1,089.87 |
| This is explained by the fact that the amount brought forward into Ledger (Oct. 1, 1900, to Nov. 30, 1901), page 702, Oct. 1, 1900, is | 18,224.52 |
| While the amount actually charged to Construction from Jan. 1, to Oct. 1 (less credits) as per Ledger C was only | 17,134.65 |
| Difference | 1,089.87 |

Lincoln Gas & Electric Light Company.

MAY 29, 1912.

Lincoln Gas & Electric Company, Lincoln, Nebraska, Att. Mr. B. C. Adams, Gen. Mgr.

GENTLEMEN: The writer wishes to apologize for not writing you sooner regarding the old engine, etc., but only returned to the office this morning, having gone direct from Lincoln to Burlington, Chicago & St. Louis. We have taken this matter up with our estimating department and find that we can make you an allowance of $400.00 for the engine, countershafting with pulleys and the belt tightener. This will eliminate from the original proposition the #7 blower and the two leather belts. The latter, you will appreciate, we would hardly be able to utilize, and in all probability they have been used up around your works by this time.

I would appreciate it if you would forward the executed contract by return mail, as we require same to file amongst our records. We have, however, ordered all the firebrick linings for this set, and work on the castings and shell is now in progress in the shops. We would also appreciate the sketch which Mr. Montgomery promised the writer he would send us in which he would locate the centers between the present and the new apparatus.

Regarding the placing in position of the material now on the ground for the down run, or hot valve connection to the carburetter, we would advise that we will place this material in the position as agreed upon, without any charge to you, but before this is done, at the time the old set is put out of commission, we wish to take
1763 up with you the feasibility of putting in an entirely new valve of the type we are furnishing with the new apparatus. We believe that you will be so well pleased with this new valve that you will be glad to substitute one like it for the present valve. At that time we will take up with you the cost of such a change, and feel sure that you will agree with us that this is the proper thing to do.

With kindest regards and thanking you for your courtesies to the writer while in Lincoln, we remain,

Very truly yours,

THE WESTERN GAS CONSTRUCTION COMPANY,
Per EDW. W. STEINMUELLER, *Sales Agent.*

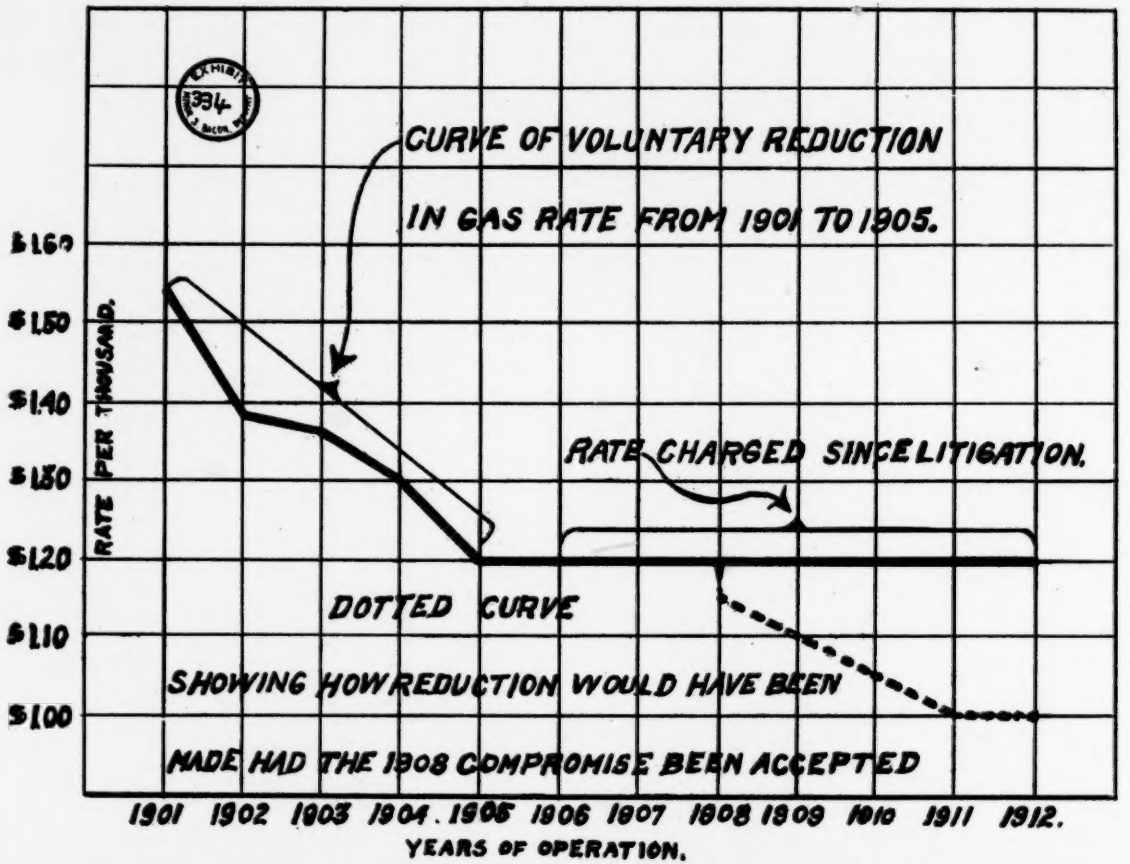
## Lincoln Gas & Electric Light Co.

**Bell 75** **Auto B2575**



The above chart shows the rate which has been charged for gas since 1901 and proves that during the years up to the time of litigation the company voluntarily reduced its rate so that in the course of five years a 23 per cent reduction was made. (And by the way, the rates charged each year were less than that prescribed by Ordinance.)

It also shows that if the company's compromise had been accepted in 1908 the rate would have been reduced five cents each year so that the dollar rate would have been reached in 1911.

In spite of all that has been said to the contrary, the company has consistently tried to bring about gradual rate reductions for the benefit of the consumer.

Doherty Operating Co., New York, N. Y.

GENTLEMEN: Inclosed please find clipping concerning the gas holder permit. This permit has been granted with the understanding that the height of the holder erected shall not exceed 25′, that it shall contain not less than a maximum of 100,000 cu. ft. of gas, that it shall be surrounded by trees and shrubbery.

The city attorney will draw stip*lu*ation in reference to the district which shall be supplied in Lincoln from this holder, will probably specify certain sizes of mains in certain streets, and further, will provide that the city of Lincoln does not recognize any franchise right in the granting of this permission.

We have agreed with Mr. Hill, owning a house and six lots in the block with our property, to take his property off his hands at the end of a year after the erection of the holder, at $3,500, providing he wishes to sell at that time. I do not believe that we can lose more than $500 on this basis.

We may have still further trouble from the property holders, in the neighborhood of the holder.

We wish to emphasize the necessity of ordering a holder at once and getting quick delivery. The Western Gas Construction Company has made us a price of $7,231 on a holder 22′ 8″ in height and something like 75′ in diameter, with a stone or concrete tank, we to build the tank, and, of course, this is not included in the above price. No doubt, you can get a better price than has been submitted to us, and also bring pressure to bear in the way of prompt delivery.

Yours very truly,

LINCOLN GAS & ELEC. LT. CO.,

MAY 4, 1909.

Mr. Henry L. Doherty, 60 Wall St., New York City.

DEAR SIR: With the death of Mr. I. M. Raymond we have but seven members on our board of directors where we should have nine. You recollect that Mr. McMillin did not accept his election as a member of the board.

Charlie Frueauff has written asking that we call a meeting of the board of directors in order for them to aut-orize making the Ohio Trust Co. our transfer agent and the State Savings Bank and Trust Co. registrar of our stock in Columbus.

When this meeting is called we believe that you would want two new members elected on the board.

I have talked this matter over with Mr. Strode and we agree that the names of A. H. Armstrong of the Armstrong Clothing Co. and Dr. P. L. Hall, Pres. of the Central National Bank would be good ones to suggest.

Kindly advise us as to your wishes in this matter.

Yours very truly,

____ ____,
*General Manager.*

7/2/10.

Mr. Frank W. Frueauff, New York, N. Y.

DEAR MR. FRUEAUFF: We have closed all contracts relative to the erection of the holder in East Lincoln, and excavation was started Thursday. We hope to be able to start the erection of the holder itself about August 10th. We contemplate that it will take something over a month to complete the erection. I addressed a letter to the Doherty Operating Company on Thursday in which was contained the figures covering construction costs.

The sale of gas ranges in Lincoln is coming along very nicely. We actually sold and connected 75 new ranges in June and you know we are not taking in any second hand ranges, whatever.

The sewer which the city compelled us to build at the plant is

about completed and Mr. Bradford thinks that the total cost is going to be about $750.

Our revenue in Uni. Place for the first full month we have had was $102. Things are going rather slowly out there at present, due to the dry condition of the surrounding country, so I am told. I feel, however, that since our first month's bills have been distributed, we will have pressure brought to bear on prospective consumers by those already using gas. We have discontinued the Acetylene plant at Havelock and are now furnishing gas from our Uni. Place mains. The Havelock consumers are using the gas for illuminating purposes only and the revenue from them is very small. We do not feel that it would be wise to attempt the installation of gas stoves until our holder in East Lincoln is erected.

The coal situation in this part of the country is still in bad shape and the Traction Company here is complaining in the newspapers of a hold up on the part of the operators. Humpe had an article in the paper Thursday to the effect that after carefully checking over the additional price they have to pay for coal, they have spent over $20,000 over and above normal costs.

Our fuel costs last month were about $1,000 above normal and we hope that this amount will not be exceeded this month.

We have used $970.45 of gas oil at 2.7¢.
270.72 of fuel oil at 2.4¢.
606.00 of tar at 2¢.
631.24 of Kansas wash slack at $3.05.
276.85 of mine run at $3.75.
578.40 of Colorado slack at $4.70.
499.00 of gas coal at $5.50.

$3,832.66 Total.

We are mailing you today the Incorporation papers for the new Fremont Company. We need money bad at Fremont and would say that we have put over $4,000 into construction since the first of April up to the first of May. You have advanced us, during this time, $2,000. It is impossible for us to pay many of our obligations until we can secure money from some source or other. Upon receipt of the Articles of Incorporation together with other papers which we are sending you, I imagine that it rests entirely with your office to get out the new stock certificates and bonds.

Yours very truly,

____ ____,
*General Manager.*

1777 *Ordinance to be Voted upon at a Special Election, in Lincoln, Nebraska, Friday, December 27, 1912. Polls open eight a. m. and close at seven p. m.*

Roscoe C. Ozman, City Clerk.

An Ordinance Regulating the price of Manufactured Gas and Prescribing penalties for the enforcement thereof: Providing for a compromise settlement of the suit pending in the Federal Court involving the validity of the dollar gas ordinance passed November 12, 1906, and providing for a compromise settlement of the occupation tax assessed against the Lincoln Gas & Electric Light Company and prescribing an occupation tax: Providing for a compromise settlement of the franchise controversy and recognizing and reaffirming the franchise of the Lincoln Gas Company, its successors and assigns, for the life of the original grantee, and repealing all ordinances and parts of ordinances in conflict herewith.

Be it ordained by the Mayor and Council of the City of Lincoln, Nebraska.

Section 1. That the price to be charged for gas manufactured and sold in the City of Lincoln for illuminating or heating purposes after this ordinance shall take effect and up to December 1, 1914, shall be One Dollar net per one thousand cubic feet; and the price to be charged subsequent to December 1, 1914, shall be ninety-five cents net per one thousand cubic feet, and subject thereafter to further regulation; provided that a penalty of not more than twenty cents per one thousand cubic feet may be added to the prices hereinabove specified, when payment is not made within six days from date of bill rendered covering gas consumed; and provided that a minimum monthly charge of twenty-five cents per month for a single service may be charged and collected by any gas company.

1778 Section 2. Any gas company, or any executive officer, president or manager of any gas company, who shall violate any provision of this ordinance shall be deemed guilty of a misdemeanor and on conviction thereof shall be fined in any sum not less than Ten Dollars, nor more than One Hundred Dollars and a violation hereof for each calendar day or part thereof, shall constitute a separate offense.

Section 3. That in the matter of the enforcement of the ordinance passed November 12, 1906, taking effect December 1, 1906, fixing the price of Gas at One Dollar net per one thousand cubic feet, and the suit pending in the Federal Court for the District of Nebraska, involving the validity of said ordinance and in the way of compromise of the matters in controversy in said suit, the City Attorney of the City of Lincoln is hereby authorized, instructed and directed to stipulate for, agree to and aid in securing the decree of said Court, enjoining the enforcement of said ordinance on the ground that the rate prescribed would be confiscatory from December 1, 1906, to

December 1, 1910, and that the enforcement thereof be enjoined on the ground of the invalidity of said ordinance on the condition that the Lincoln Gas & Electric Light Company shall stipulate for, agree to and aid in securing the decree of the Court in said case, to the effect that said company shall refund to the consumers of gas of the City of Lincoln, for gas sold by said company in said City, subsequent to December 1, 1910, twenty cents per one thousand cubic feet of gas sold at One Dollar and twenty cents per one thousand cubic feet, and by decree provide for the determination thereof in case of dispute and providing, if agreeable to the Court, that in the adjustment thereof, a representative of the City of Lincoln shall have access to the books and records of said company showing the charges for gas subsequent to December 1, 1910, and shall be permitted to participate with the company in determining and verifying the amounts to be refunded to the various consumers of gas, as applications shall be made therefore, and providing for the release and discharge of the bonds furnished by the company for the protection of the gas consumers, in said case, under such terms and conditions as may be prescribed by the Court. This settlement is to be without prejudice as against either party in any subsequent proceeding to show the value of the property involved.

Section 4. That in the matter of the occupation tax assessed against the Lincoln Gas & Electric Light Company and involved in suits pending and as a compromise settlement of the controversies therein involved, and as a part of the settlement between the City of Lincoln and the Lincoln Gas & Electric Light Company, with respect to the price to be charged for gas as herein provided, the Lincoln Gas & Electric Light Company is to pay the City of Lincoln on final decree in the case, in the Federal Court involving the gas rate hereinbefore referred to, the sum of Twenty Thousand Dollars ($20,000) in full settlement of the occupation taxes assessed against said company to the date of the taking effect of this ordinance, and is to pay the City of Lincoln thereafter an occupation tax in the amount of one per cent annually on its gross receipts from gas and electric sales; provided an equal rate for occupation tax shall be imposed on any other company furnishing gas or electric service, and is to pay in addition, all unpaid Court costs in the case in the Federal Court, involving the gas rate hereinbefore referred to.

1779

Section 5. That in the matter of the action pending in the District Court of Lancaster County, Nebraska, under the title of State ex rel. Frank M. Tyrrell, County Attorney vs. Lincoln Gas & Electric Light Company, involving the franchise rights of the Lincoln Gas & Electric Light Company, the City Attorney of the City of Lincoln is authorized and directed to stipulate for, agree to and aid in securing the decree of said Court in said case to the effect that the franchises granted the Lincoln Gas Company in 1872 were for the corporate life of the Lincoln Gas Company and expire at the expiration of said period; and authorizing and directing the City Attorney to join the Lincoln Gas & Electric Light Company in the aforesaid construction of the franchise rights granted, and to bind the City thereby in all future extensions of its property and investments made in relation

thereto. The Company waives to the city in any condemnation or rate proceedings any franchise value on account of franchise rights herein or heretofore granted, or reaffirmed to it by said city, or on account of this settlement, but does not waive business value or value as a going concern attaching to its property by reason of the extent of its business or objection to the right of the city to condemnation, the right to the same being left open for determination at the time of such proceeding.

Section 6. The Lincoln Gas & Electric Light Company as part of this settlement, is to pay all expenses incurred by the city in
1780 submitting this ordinance to a vote of the people for their approval, payment whereof is to be made by the Gas Company in advance of such election; and is to pay all unpaid court costs in the Dollar gas ordinance case, the occupation tax cases and the franchise case.

Section 7. In addition to the provisions of Section 6, hereof the Lincoln Gas & Electric Light Company is to pay, in case the provisions of this ordinance shall be approved and adopted by a vote of the people of the City of Lincoln, such additional expense as the City of Lincoln shall have incurred in the employment of an expert to value the property of the Gas Company, and in the employment of Special Counsel to assist the City Attorney in the matters referred to in this ordinance.

Section 8. That the original ordinance passed November 12, 1906, approved November 19, 1906, entitled "An Ordinance regulating the price of manufactured gas, establishing penalties for the violation of the provisions of this ordinance and repealing all ordinances in conflict herewith," is hereby repealed.

Section 9. This ordinance shall be submitted to a vote of the people of the City of Lincoln, at a special election to be held under the provisions of the Statutes of the State providing for an initiative and referendum vote on ordinances of the City, and if a majority of the electors voting at such special election shall vote for the adoption of this ordinance, then the same shall thereupon be in full force and effect.

Introduced by Thos. H. Pratt, by request.

# REPORT OF EXPERT ON GAS PROFITS

LINCOLN, Neb., Dec. 25.—To the Editor of The State Journal: Will you please publish the following report from Mr. Adams, the expert employed by the city in the dollar gas case:

"LINCOLN, Neb., Dec. 25, 1912.—Fred C. Foster, city attorney, Lincoln, Neb. Dear Sir: The following complies with your request for a statement as to the profits of the gas company:

"If the gas sold in Lincoln during the year of 1907 had been at the net rate of $1 per thousand feet the gas company would have earned more than 9 per cent on the value of its plant above necessary operating expenses, including depreciation.

"Since 1907 the gas output has increased constantly, being twenty-six per cent greater in 1911 than in 1907 and this implies still larger profits.

"Yours respectfully,

"ALTON D. ADAMS."

EXHIBIT 414

I wish to add to this that in my opinion the city will be successful in the final outcome of this case.

FRED C. FOSTER.

THIS RETURN IS DUE NOW. PER DIEM PENALTY AFTER SEPT. 9.

# RETURN

OF THE

_____

COMPANY

TO THE

# BOARD OF

# GAS AND ELECTRIC LIGHT COMMISSIONERS

OF MASSACHUSETTS.

FOR THE YEAR ENDING JUNE 30,

# 1908.

1828

# Commonwealth of Massachusetts.

OFFICE OF THE

BOARD OF GAS AND ELECTRIC LIGHT COMMISSIONERS,

Room 145, State House.

BOSTON, June 30, 1908.

*To the Presidents and Directors of the Several Gas and Electric Light Companies in the Commonwealth:*

These blanks for the Annual Returns are sent in duplicate, one to be filled out, sworn to and returned to this Board on or before ***September 9, 1908.*** On the other blank a copy of the return should be made, and retained by the Company for future reference. The Returns are for the year ending June 30, 1908.

The Returns should be made in accordance with the General Instructions regarding books and accounts, and special attention should be given to Expenses, Income, Profit and Loss and Balance Sheet, WHICH MUST BE AN EXACT TRANSCRIPT FROM THE BOOKS OF THE COMPANY at the close of business June 30, 1908.

***Read carefully the various explanatory foot-notes and General Instructions.***

When, from any cause, it is not possible to answer any particular question, the spaced designed for the answer should be filled with a dash (——), to indicate that the question has not been overlooked.

Manufacturing and other companies engaged in the manufacture of gas or electricity for sale, in connection with their other business, will state the value of their gas or electric plant and answer all other questions fully.

Although special questions (see pages 22 and 23) have been arranged for companies making water, oil, or acetylene gas, those companies are, nevertheless, expected to answer as many of the other questions as the nature of the business will admit.

Great care should be taken by companies doing but one kind of lighting to answer all the questions applicable to their business.

***Special attention is called to the legislation in regard to the Returns, printed as section 32 of chapter 121 of the Revised Laws, and chapter 406, Acts of 1903, on the third page of the cover.***

Any inquiries, or other communications in relation to the Returns, should be addressed to this office.

By order of the Board of Gas and Electric Light Commissioners,

ROBERT G. TOBEY, *Clerk.*

# RETURN

OF THE

.....

# COMPANY

TO THE

# BOARD OF

# GAS AND ELECTRIC LIGHT COMMISSIONERS

OF MASSACHUSETTS.

FOR THE YEAR ENDING JUNE 30,

# 1908.

1830

Please give full corporate title of Company,

Date of organization, if since June 30, 1907,

Date when Company began to sell Gas or Electric light, if since June 30, 1907,

Date or dates during the year of the return when capital was paid in,

Location of principal business office,

Names of the cities or towns supplied with Gas by the Company, with number of consumers' meters in each place,

Names of the cities or towns supplied with Electricity by the Company, with the number of customers (*not including the city or town*) in each place,

## LIST OF SALARIED OFFICERS.

| NAME. | OFFICIAL POSITION. | ANNUAL SALARY. |
|---|---|---|
| | | |

If organized since June 30, 1907, give the date when, and amount of capital paid in:

CAPITAL.

1. Capital authorized by charter, . . . . . $
2. Capital authorized by vote of Company, . . . . . .
3. Capital paid in prior to June 5, 1894:

   ..... shares, par value, $ ..... $
4. Capital approved by Board $ ....., date of same, .....

If additional stock has been issued since June 30, 1907, give the date, amount and market value thereof as approved by the Board, the date and terms upon which such issue was offered to stockholders, the date or dates on which the same was paid in, and if the whole or any part of the issue was sold at auction, the date or dates of such sale or sales, the number of shares so sold and the amounts realized therefrom:

1832

## SCHEDULE A. DEBTS, COST OF PLANT, JUNE 30, 1908.

Whole number of stockholders, . . . . . .

Number of stockholders resident in Massachusetts . . . . . .

Amount of stock held in Massachusetts, . . . . . shares.

**DEBITS.**

## SCHEDULE BB. STATEMENT OF INCOME AND EXPENSES.

| EXPENSES. | Dolls. | Cts. | Dolls. | Cts. |
|---|---|---|---|---|
| **For Manufacture:** | | | | |
| 1. Coal or other fuel, including all expenses of depositing at works, | | | | |
| 2. Rentals for, { Real estate, / Water power, | | | | |
| 3 Oil and waste, | | | | |
| 4. Water, | | | | |
| 5. Wages at station, | | | | |
| 6. Station repairs, | | | | |
| 7. Steam plant repairs, | | | | |
| 8. Electric plant repairs, | | | | |
| 9. Apparatus and machinery (station tools and appliances), | | | | |
| **For Purchase of Electricity:** | | | | |
| 10. Current bought of ..... Electric Company, quantity ..... K.W. ..... c per K.W., | | | | |
| **For Distribution:** | | | | |
| 11. Wages for care of lights and meters, clerical labor in this department, and salary or commission of collectors, | | | | |
| 12. Repairs and renewals of lines, | | | | |
| 13. Repairs and renewals of meters, lamps and motors, | | | | |
| 14. Distribution tools and appliances, | | | | |
| 15. Carbons, | | | | |
| 16. Incandescent lamps, | | | | |
| **For Office Expenses and Management:** | | | | |
| 17. Directors' allowances | | | | |
| 18. Salaries of officers, | | | | |
| 19. General salaries, | | | | |
| 20. Rent of offices, if separate from plant, | | | | |
| 21. General office expenses, | | | | |
| **For Miscellaneous Expenses:** | | | | |
| 22. Taxes. Town or city $ ..... | | | | |
| Corporation, ..... | | | | |
| State commission, ..... | | | | |
| 23. Insurance { Fire, $ ..... / Employer's liability, ..... | | | | |
| 24. Law expenses, | | | | |
| 25. Claims, | | | | |
| 26. Bad debts,* | | | | |
| 27. Incidental expenses, viz.:† | | | | |
| 28. Total expenses, | | | | |
| 29. Balance to Profit and Loss, | | | | |
| Total Debits, | | | | |
| Ratio of operating expenses to gross earnings, | | | | |

* Only those included in income statement, page 9.

† To include only such items of expenses attending the manufacture and sale of Electricity as are not already given.

## GENERAL INFORMATION — *Gas, continued.*

Is any meter rent charged, and what is the rule governing such charge?

Number and size of prepayment meters in use: 3 Lts., 5 Lts., 10 Lts., 20 Lts. Total.

Number and size of meters condemned: 3 Lts., 5 Lts., 10 Lts., 20 Lts., 25 Lts., 30 Lts., 35 Lts., 40 Lts., 45 Lts., 50 Lts., 60 Lts., 80 Lts., 100 Lts., 125 Lts., 150 Lts., 180 Lts., 200 Lts., 250 Lts., 300 Lts., 400 Lts., 500 Lts., Total,

Number of gas stoves used by consumers during the year,

Number of stoves leased by the Company,

Number of high candle power lamps used by consumers during the year,

Number of such lamps leased by Company,

Rental price of same per lamp,

Number of gas engines used by consumers during the year,

Number of gas engines leased by Company,

Rental price of same,

Usual day pressure on street mains, as indicated at works,

Usual night pressure on street mains, as indicated at works,

Average candle power of the gas, as determined by State Inspector,

Gross price per 1,000 feet at the close of the year, $

Are discounts allowed, and if so, how are they made?

What changes have been made in price or discounts during the year, and when made?

Number of public gas lamps supplied at close of year,

Price for public gas lamps,

Estimated hourly consumption of each lamp, cubic feet.

Estimated number of hours during the year that each lamp is lighted,

Kind of burner principally used on public lamps,

Number and kind of public lamps other than gas or electric lamps maintained by the Company,

GENERAL INFORMATION — *Gas, continued.*

Kinds of coal carbonized (not including those for making water gas),

Proportions of each, if used together,

Kind of gas coal used,

What materials were used for enriching the coal gas?

Amount of each per ton of coal carbonized?

Capacity of works per hour, as observed in actual use,

## GENERAL INFORMATION — *Gas, concluded.*

### ONLY THOSE COMPANIES MAKING "OIL GAS" ARE TO ANSWER THE FIVE QUESTIONS FOLLOWING.

What patent process, if any, is used in the manufacture of gas?

How long has such process been employed?

Kinds of coal or other fuel used,

What percentage of the gas in the holder is atmospheric air?

At what point in the works is the air mixed with the gas?

### ONLY THOSE COMPANIES MAKING "ACETYLENE" GAS ARE TO ANSWER THE QUESTIONS FOLLOWING.

What type of generator is used in the manufacture of the gas?

How long has such apparatus been employed by this Company?

### QUANTITY OF CARBIDE USED DURING THE YEAR.

| On Hand June 30, 1907. | Received during the Year. | Used during the Year. | On Hand June 30, 1908. | Average Cost of same per Lb. Delivered at the Works. |
|---|---|---|---|---|
| | | | | |
| | | | | |
| | | | | |

## GENERAL INFORMATION. ELECTRIC LIGHT.

## Extracts from Chapter 121 of the Revised Laws.

SECTION 5. Said board shall have the general supervision of all corporations and companies which are engaged in the manufacture and sale of gas or electricity for light or heat, and shall make all necessary examinations and inquiries and keep themselves informed as to the compliance of the several corporations and companies with the provisions of law.

SECTION 29. Corporations and companies which are engaged in the manufacture and sale of gas or electricity for light or heat shall keep their books and accounts in a form to be prescribed by the board of gas and electric light commissioners, and the accounts shall be closed annually on the thirtieth day of June, so that a balance sheet of that date can be taken therefrom. Manufacturing companies in which the manufacture of gas is a minor portion of their business shall be required to keep accounts of the expenses and income of their gas business only.

SECTION 30. Persons or corporations engaged in the manufacture or sale of gas or electric light shall keep such records of their work at their manufacturing station, and in respect to their distributing plant, as the board of gas and electric light commissioners may from time to time require. Said records shall be in such form as the board may prescribe.

SECTION 32. Each such gas or electric light corporation or company neglecting to make the annual return required by the preceding section, shall, for the first fifteen days or portion thereof during which such neglect continues, forfeit five dollars a day; for the second fifteen days or any portion thereof, ten dollars a day; and for each day thereafter not more than fifteen dollars a day. If any company unreasonably refuses or neglects to make such return, it shall, in addition thereto, forfeit not more than five hundred dollars for each offence. All forfeitures recovered under the provisions of this section shall be paid into the treasury of the commonwealth and applied to the payment of the expenses of the board.

SECTION 41. In the construction of sections four, five, six, seven, eight, twenty-eight, twenty-nine, thirty-one, thirty-three and thirty-four of this chapter, the terms "gas company" and "corporation" shall include all persons owning or operating works for the manufacture and sale of gas for heating or illuminating purposes within the commonwealth, and the terms "company" and "companies" shall include all corporations or individuals engaged in the manufacture and sale of electric light within the commonwealth.

## From Chapter 406 of the Acts of 1903.

SECTION 1. Corporations and companies engaged in the manufacture and sale of gas or electricity for light or heat shall annually, on or before the second Wednesday of September, make to said board, in a form prescribed by it, a return for the year ending on the thirtieth day of June preceding, signed and sworn to by its president and treasurer and a majority of the directors, of the amount of its authorized capital, its indebtedness and financial condition, on the said thirtieth day of June preceding, its income and expenses during the preceding year, its dividends paid out and declared, a list of the names of all of its salaried officers, and the amount of the annual salary paid to each, and the balance sheet of its accounts as of said preceding thirtieth day of June. Every such corporation and company shall at all times, upon request, furnish any information required by the board relative to its condition, management and operation, and shall comply with all lawful orders of said board.

| LINCOLN GAS & ELECTRIC LIGHT COMPANY, Appellant, *against* THE CITY OF LINCOLN *et al.*, Appellees. | No. 744. Oct. Term, 1916. |

## PETITION FOR LEAVE TO FILE BILL OF REVIEW IN THE COURT BELOW.

To the Honorable the Justices of the Supreme Court of the United States:

Now comes the Lincoln Gas & Electric Light Company, a corporation, appellant, and avers and represents and shows to the Court, that it commenced and has prosecuted the above-entitled suit in equity, to obtain an injunction enjoining the enforcement of a gas rate fixed by ordinance of the City of Lincoln, Nebraska, as confiscatory, illegal and void.

Appellant further shows that upon the 27th day of December, 1906, a temporary injunction was issued by the Circuit Court of the United States for the District of Nebraska, and that thereafter evidence was taken by both parties to said cause, and upon the 20th day of March, 1909, the Court

10 twenty months. That there is no evidence in the record in said cause docketed herein, as above mentioned, showing the earnings and effect upon appellant's income under said rate, the same having occurred since the taking of testimony therein.

That the master found that the company, in the year 1907, would have earned only such a return under the rate ordinance, that said ordinance would have been confiscatory upon the valuations as found by the Master, but the Master made the additional finding as follows: "All human experience has shown that increased consumption follows quickly a reduction in the price of com-
11 modities, and the evidence in this case satisfactorily shows that gas is no exception to the rule."

This Honorable Court, in the case of City of Knoxville v. Knoxville Water Company, 212 U. S., page 1, at page 15 said, "* * * but evidence of the operations of the years succeeding to the ordinance is relevant and of great importance, and by a consideration of such evidence a much greater degree of certainty could be obtained." And in the case of Wilcox v. Consolidated Gas Company, 212 U. S., page 19, at page 51, this Court said, "* * * but it is equally true that a reduction in rates will not always reduce the
12 net earnings, but on the contrary may increase them. The question of how much an increased consumption under a less rate will increase the earnings of complainant, if at all, at a cost not proportioned to the former cost, can be answered only by a practical test." And in the case of Des Moines Gas Company v. Des Moines, 238 U. S., at page 173, the Court said, "We think this is particularly so in view of the fact that ordi-

narily time alone can satisfactorily demonstrate in 13
a case like this whether or not the rates established will prove so unremunerative as to be confiscatory in the sense in which that term has been defined in rate-making cases."

Therefore, it would seem that this Court, as well as the master appointed by the Court below, have a fixed idea which might be generalized into the expression that reduction in rate causes increase in consumption and in earnings. Appellant desires to present the evidence of actual operations which will show that gas being a necessity in the household, the impression of this Honorable Court, as well as the master 14
herein, is erroneous and in truth and in fact under the actual operating conditions the same is not the case, and there is not such increase. Appellant desires to take additional testimony in the Court below for the purpose of showing to the Court below and to this Honorable Court the actual operations under the rate fixed by the ordinance, in order that the Court below may consider the same, and this Honorable Court may have the same before it when considering the matters of value and return embraced in the record now on file in this appeal.

That since the order in the Court below, and 15
the perfecting of the appeal herein, and upon the first day of July, 1916, the Supreme Court of the State of Nebraska, rendered an opinion in an action commenced by the appellees herein, against the appellant in the State Court for the recovery of the above mentioned occupation tax, and in said decision the Supreme Court of Nebraska (referring to said 3% gross receipts tax) said, "An action in the State Courts to recover an

16 occupation tax against such corporation, begun while an action is pending in the Courts of the United States, to determine whether another ordinance regulating the rates of service of such corporation is confiscatory, should be abated until the action in the Federal Court is finally determined."

That by reason of the failure of the Court below to make an order upon the validity of the said occupation tax ordinance, the appellant herein is unable to present to this Honorable Court for its review the decision upon the question of the legality of said occupation tax or the authoritative determination of the Court below thereon.

17 That the Court below dismissed the complainant's bill of complaint without giving the complainant the right to, on motion, reinstate the said cause with all of the pleadings and evidence then on file, and without giving the appellant the right to file such additional pleadings and take and file such additional evidence as in the light of a practical experience and actual application of the rates would demonstrate whether or not said rates would prove so unremunerative as to be confiscatory and cause irreparable loss, damage and injury to the appellant.

That since the putting into effect of the rate,
18 as above mentioned, on May 1, 1915, the controversy in this cause and as embraced in this record, is now narrowed in practical effect to the question as to the return to the consumers of gas of the amount collected in excess of the ordinance rate during the pendency of the litigation hereunder, and by reason thereof, this Honorable Court should have before it all facts bearing upon the rate of return before entering an order,

the effect of which would cause the return to the consumers of money which could not be subsequently acquired by appellant in the event that after practical operations a new action should be commenced and the ordinance held confiscatory. That the appellant, since the taking of said testimony in the Court below, has, in all things, handled its property in a proper, customary and economical manner, and has paid out no dividends whatsoever, but that by reason of said decreased rate and its necessary operating expenses, has been unable to accumulate sufficient funds to repay said amounts if the same should be ordered by this Honorable Court, and in such event insolvency and bankruptcy stare appellant in the face. That appellant was entirely unable, on its own resources, to furnish the surety bond above mentioned, now in force, but that arrangements by others were made with the surety company furnishing the said bond, whereby, through the pledging of their credit and collateral by such outside parties, appellant was enabled to furnish said surety bond, thereby assuring to the consumers such returns, but the appellant will be unable to repay to its sureties the amounts they will be so called upon to repay on appellant's behalf. That its books of account and records are complete and up to date, and the taking of the additional testimony required will involve no complicated problems or questions of fact for determination, but consists practically entirely of a mere compilation of accounts and checking of the accuracy of the same. The new matter, in the nature of newly discovered evidence, is presented to this Court, and this petition covering the same at the earliest date at

22 which a comprehensive showing covering all seasons and the operations for a reasonable time under the said ordinance rate could be made.

The appellant's bill of review presented herewith is based upon new matter which has arisen since the decree in the Court below in the nature of newly developed or newly discovered evidence which was not in existence and could not have been found and produced by the use of reasonable diligence before the decree was rendered below, and that said evidence is material and necessary to a proper, just and equitable decree in the Court below, and decision on the appeal of said
23 cause pending in this Honorable Court, and would materially affect the decree and would induce a different result than the decree heretofore entered herein, and that the failure to rule upon said occupation tax ordinance, and the said failure to permit the reinstatement of said cause, constitute errors of law apparent upon the face of the decree and the pleadings and proceedings upon which the same is based, and constitute violations of the rules of law and equity and of equity practice in cases involving confiscatory rates.

That no mischief, inconvenience, injury, damage or injustice can be done to the appellees,
24 or to the consumers by bringing upon the records of this cause, the result of the trial and test of said rate, but that great and irreparable injury, loss and damage will be suffered by this appellant unless such facts shall be before this Honorable Court for its consideration.

*Wherefore*, by reason of said subsequent happenings in the nature of newly discovered evidence, and by reason of said errors of law ap-

parent upon the face of the decree, pleadings and proceedings upon which it is based, *appellant prays*: that

1.—It be permitted to file in the United States District Court for the District of Nebraska, its bill of review in substiantially the form herewith presented to this Honorable Court, or such other and further supplemental bill, in the nature of a bill of review, as may be proper to bring to the attention of the Court below and to this honorable Court, the result of the trial and test of said gas rate of $1.00 net per thousand cubic feet, and that it be permitted to take testimony bringing its earnings and the other matters involved, down to the latest practicable date.

2.—This cause be continued on the docket of this Honorable Court until the proofs below are taken and brought upon the record of this cause in this Honorable Court.

3.—This Honorable Court may order the Court below to make or cause to be made such definite decisions and findings as will correct, upon the record, the said above alleged errors of law apparent upon the face of the record.

And the *appellant prays* for such other and further and appropriate relief as to this Honorable Court may seem proper.

SUPREME COURT OF THE UNITED STATES.

| | |
|---|---|
| LINCOLN GAS & ELECTRIC LIGHT COMPANY, Appellant, *v.* THE CITY OF LINCOLN *et al.*, Appellees. | Affidavit. |

State of New York, }
County of New York, } ss.:

V. L. Board, being first duly sworn, deposes and says: That he has examined the books of Lincoln Gas & Electric Light Company, and familiarized himself with them for the purpose of securing the figures for this affidavit; that he has carefully checked the same, and states as follows:

That beginning approximately from May 1, 1915, the company has billed customers for gas consumed at the rate of $1.00 net per thousand cubic feet; and that the rate for gas consumed prior thereto and for the period of about eight years or more, had been $1.20 net per thousand cubic feet. Affiant states that for the twenty months' period beginning with September 1, 1913, and ending April 30th, 1915, during which period the rate for gas was $1.20 net per thousand cubic feet, the average amount of gas consumed was 45,400 cubic feet per customer, and that during the twenty months' period immediately following, to wit, May 1st, 1915, to December 31st,

34 1916, during which time the rate for gas was $1.00 net per thousand cubic feet, the average amount of gas consumed per customer was 45,014 cubic feet, a decrease, from the date of such reduction, of 386 cubic feet per customer. That the average revenue per customer received by the company during the twenty months' period ending April 30th, 1915, under the $1.20 net rate per thousand cubic feet, was $55.53, and under the $1.00 net rate, for the twenty months' period ending December 31st, 1916, was $46.03, a decrease of $9.50 per customer, which is greater than the decrease caused by the difference in rate alone. That the annual average amount of gas
35 consumed per customer, and the annual revenue received therefrom, from January 1st, 1907, to December 31st, 1916, are as follows:

| Year. | Average Consumption per Customer. | Average Gross Receipts per Customer. |
|---|---|---|
| 1907 | 28,620 | $34.43 |
| 1908 | 29,290 | 35.13 |
| 1909 | 28,850 | 34.62 |
| 1910 | 27,890 | 33.37 |
| 1911 | 30,297 | 36.54 |
| 1912 | 30,230 | 36.33 |
| 1913 | 27,020 | 32.69 |
| 1914 | 27,300 | 32.95 |
| 36 1915 | 26,670 | 28.76 |
| 1916 | 25,580 | 25.64 |

That on December 31st, 1914, being the nearest all-season calendar year prior to the time when the $1.00 rate was put into effect, there were 8,209 customers, and on December 31st, 1916, the nearest all-season calendar year after the reduced rate was put into effect, there were 9,032

customers, or 823 additional, which increase in 37
customers, in the opinion of affiant, is about the equivalent of the growth caused by the increase in population for the intervening twenty-four months' period. The total increase in sales of gas in cubic feet during the year 1916 over the year 1914 was approximately 6,894,500 cubic feet, or, distributing such total additional sales over the total additional customers, would be approximately 8,377 cubic feet as a total for each additional customer, as compared with the prior average of approximately 25,000 to 30,000 cubic feet per customer, as above mentioned, and the total gross receipts from such additional customers 38
on the above basis, amounting to less than 70c. each per month, would be less than the amount required to pay the fixed charges in the investment in meters, distributing lines, etc., required to supply said customers, the upkeep thereof and the cost of the gas consumed.

During the year 1915, one-third thereof was at the rate of $1.20 net per thousand cubic feet, and the balance at $1.00 net per thousand cubic feet; and during the whole of the year 1916, at the rate of $1.00 net per thousand cubic feet. Therefore, the calendar years 1914 and 1916 are compared.

That the gross revenue from sales of gas dur- 39
ing the calendar year 1914, during which year the net rate was $1.20, was $270,473.78, and for the calendar year 1916, during which year the net rate was $1.00, was $231,597.26, or a decrease in gross revenue of $38,876.42. The operating expenses of the company, under either above mentioned rates, would be approximately the same (except for the steady increase in expenses as

hereinafter mentioned, and except for the occupation tax of 3 per cent. of gross revenue), so that the decrease in the company's net revenue would be at least equal to the above-mentioned decrease in gross revenue.

Affiant further states that the said actual experience of the company for such period of twenty months, has shown a less amount of gas sold per customer, and a revenue per customer less than that caused by the reduction in rate, and a decrease in receipts for such period of $56,342.95.

Affiant further states that since the organization of this company, no dividends whatever have been paid to its stockholders, or unusual or extraordinary expenses of any kind or character. That since the passage of the rate-fixing ordinance, the business of the company has been carried on in its usual, customary and ordinary manner, and that the company has not been able to accumulate the funds sufficient to refund to the consumers of gas the amount which may be ordered by the Court. That while the sales per consumer are decreasing, as above shown, affiant states that the operating expenses are increasing steadily and very materially. That the labor employed in and about the plant of the company has, during the years 1915, 1916 and 1917, been steadily increasing in cost. That the labor, coke, iron, metal and merchandise have all increased in price to from 10% to 50% above the prices at the time of the master's report in this cause. That the company uses, in the manufacture of its gas, large quantities of oil, for the manufacture and enrichment thereof, and that the said oil is almost impossible to secure, and at the present time will cost the company approximately 100% more than

previously, and the company is entirely unable to make contracts for any considerable supply thereof in advance. That the tendency of all labor, material and supplies at the present time is to largely increase in cost, thereby tending to reduce the net earnings of the company in addition to the above mentioned reduction in rate. 43

V. L. BOARD.

Sworn to before me this 24th day of March, 1917.

**Bill of Review.**

DISTRICT COURT OF THE UNITED STATES,

FOR THE DISTRICT OF NEBRASKA.

LINCOLN GAS & ELECTRIC LIGHT COMPANY,
Plaintiff,

*against*

THE CITY OF LINCOLN, and others,
Defendants.

No.
In Equity. 45

Now comes the plaintiff and with leave of the Supreme Court of the United States, first had and obtained, files this, its bill of review, or supplemental bill in the nature of a bill of review, and avers and states and shows to the Court the following facts and proceedings, to wit:

15

46

I.

That this bill is filed and presented, first by reason of new matter that has arisen since the decree herein, material and necessary to a proper determination of this cause, second, by reason of newly developed facts and evidence in the nature of newly discovered evidence material to a consideration and decision herein which was not in existence and could not have been found and produced by the use of reasonable diligence before the decree herein was rendered; third, by reason of errors of law apparent upon the face of the decree and the pleadings and proceedings upon
47 which it is based, consisting of the violation of rules of law and equity and the settled practice of the Court in such cases.

II.

That on the 16th day of June, 1915, it was decreed by this Court that plaintiff's bill for an injunction against the rates fixed by ordinance of the City of Lincoln, be dismissed; that the report of the special master theretofore appointed be and the same was confirmed; that the restraining order against the enforcement of said ordinance be dissolved and that the plaintiff pay the costs of this action.

48

III.

The plaintiff duly perfected an appeal from said decree to the Supreme Court of the United States within the time prescribed therefor, and that said appeal has been pending in said Court since the 22nd day of November, 1915.

That the injunction heretofore granted by this Court was restored and held in effect during

the pendency of the appeal upon the condition that 49
plaintiff enter into a bond in the sum of five hundred and seventy-five thousand dollars ($575,000), conditioned upon its paying all overcharges to consumers in the event that the ordinance should be sustained fixing a rate of one dollar ($1) net per thousand feet of gas, which said bond was filed and approved in the sum of five hundred and seventy-five thousand dollars ($575,000) upon the 22nd day of November, 1915, and is now in full force and effect.

IV.

That plaintiff has duly done and performed each 50
and all and every of the orders, directions and commands of the said decree, and further avers that on or about the 1st day of May, 1915, the said plaintiff placed into effect a rate of one dollar ($1) net per thousand cubic feet of gas, being a rate per thousand cubic feet equivalent to the rate provided in the ordinance herein questioned, and since that date said rate of one dollar ($1) has been in full force and effect.

V.

That on or about the day of 1917,
it duly petitioned the Supreme Court of the
United States for leave to file its bill of review 51
or supplemental bill in the nature of a bill of review, or other appropriate pleading and proceeding in this Court for the purpose of bringing upon the record in this cause and Court the facts showing the result of the trial and test of the one dollar ($1) rate from the taking effect of said rate, to wit, May 1st, 1915, to the latest practicable date, and that upon due consideration

52 thereof the same was by the said Supreme Court of the United States duly allowed, a true and correct copy of said order being hereto attached, marked "Exhibit A" and made a part hereof.

VI.

1.—That in December, 1906, the City Council of the City of Lincoln passed an ordinance to be effective January 1st, 1907, imposing an occupation tax of two and one-half per cent. (2 1/2%) of its gross earnings upon all gas companies furnishing gas to inhabitants in the City of Lincoln. Thereafter, upon the 6th day of April, 1909,
53 the Circuit Court of the United States, sitting in and for the District of Nebraska, enjoined the enforcement of the said occupation tax upon the grounds of its being unconstitutional in that it was not uniform upon persons, and consequently violated the Constitution of the State of Nebraska.

2.—The master in his report in this cause, filed upon the 8th day of September, 1914, held the said occupation tax ordinance to be valid and binding. The Court, however, in approving the report of the master in a memorandum to his decree stated: "I do not agree with the special
54 master as to the constitutionality of the occupation tax ordinance of the City of Lincoln." But, however, the said Court did not directly rule or enter an order as to the validity of said occupation tax ordinance nor enjoin the enforcement of the collection of the said tax by the City of Lincoln.

3.—In December, 1909, the City Council of the City of Lincoln passed an ordinance impos-

ing an occupation tax of three per cent. (3%) upon the gross receipts of all companies manufacturing and furnishing gas and electricity to inhabitants of the City of Lincoln, to become effective in January, 1910, and repealing the two and one-half per cent. (2 1/2%) occupation tax ordinance of 1906. Later, in an action instituted in the State Court of the State of Nebraska, to enjoin the enforcement of said tax ordinances, which said action went upon appeal to the Supreme Court of the State of Nebraska, and said Supreme Court of Nebraska holding invalid the occupation tax ordinance of 1906, but declining to rule upon the three per cent. (3%) occupation tax ordinance of 1909, saying in the syllabus by the Court: 55 56

> "An action in the State Courts to recover an occupation tax against such corporation begun while an action is pending in the Courts of the United States to determine whether another ordinance regulating the rates of service of such corporation is confiscatory, should be abated until the action in the Federal Court is finally determined."

4.—That by reason of failure of this Court and by reason of the failure of the Supreme Court of Nebraska to rule upon the said occupation tax ordinance, the plaintiff herein is without relief against said tax and the penalties thereunder are piling up against the complainant and this Honorable Court has made no ruling thereon. 57

5.—That unless the validity of the occupation tax ordinance passed by the City Council in December, 1906, and in December, 1909, imposing the tax of two and one-half per cent. (2 1/2%) and three per cent. (3%) respectively, upon its

58 gross earnings be determined and taken into consideration in the fixing of the rate to be charged by the company to consumers of gas in the City of Lincoln, great and irreparable damage, loss and injury to the plaintiff will result thereby.

VII.

1.—Plaintiff further avers that while the master found from the evidence that capital invested in business in the City of Lincoln sought and generally obtained not less than eight per cent. (8%) return per annum, that a rate not lower than six per cent. (6%) per annum upon the in-
59 vested capital of this plaintiff could not be regarded as confiscatory, notwithstanding which the master found that the plaintiff would actually receive a return of only five and twelve one-hundredths per cent. (5.12%) per annum upon its investment as found by him, but that:

> "All human experience has shown that increased consumption follows quickly a reduction in the price of commodities, and the evidence in this case satisfactorily shows that gas is no exception to the rule. I find that with gas selling at one dollar ($1) per M cubic feet, plaintiff would have received since December 1st, 1906, when the rate ordinance
60 was to be effective, not less than six per cent. (6%) per annum upon the value of the property employed by it in serving the people of Lincoln."

2.—Whereas, plaintiff avers and alleges:

(a) That beginning approximately from May 1st, 1915, the company has billed customers for gas consumed at the rate of $1.00 net per thou-

sand cubic feet; and that the rate for gas consumed prior thereto and for the period of about eight years or more, had been $1.20 net per thousand cubic feet. 61

(b) That for the twenty months' period beginning with September 1st, 1913, and ending April 30th, 1915, during which period the rate for gas was $1.20 net per thousand cubic feet, the average amount of gas consumed was 45,400 cubic feet per customer, and that during the twenty months' period immediately following, to wit, May 1st, 1915, to December 31st, 1916, during which time the rate for gas was $1.00 net per thousand cubic feet, the average amount of gas consumed per customer was 45,014 cubic feet, a decrease, from the date of such reduction, of 386 cubic feet per customer. That the average revenue per customer received by the company during the twenty months' period, ending April 30th, 1915, under the $1.20 net rate per thousand cubic feet, was $55.53, and under the $1.00 net rate, for the twenty months' period ending December 31st, 1916, was $46.03, a decrease of $9.50 per customer, which is greater than the decrease caused by the difference in rate alone. That the annual average amount of gas consumed per customer, and the annual revenue received therefrom from January 1st, 1907, to December 31st, 1916, are as follows: 62 63

64

| Year. | Average Consumption per Customer. | Average Gross Receipts per Customer. |
|---|---|---|
| 1907 | 28,620 | $34.43 |
| 1908 | 29,290 | 35.13 |
| 1909 | 28,850 | 34.62 |
| 1910 | 27,890 | 33.37 |
| 1911 | 30,297 | 36.54 |
| 1912 | 30,230 | 36.33 |
| 1913 | 27,020 | 32.69 |
| 1914 | 27,300 | 32.95 |
| 1915 | 26,670 | 28.76 |
| 1916 | 25,580 | 25.64 |

(c) That on December 31st, 1914, being the
65 nearest all-season calendar year prior to the time when the $1.00 rate was put into effect, there were 8,209 customers, and on December 31st, 1916, the nearest all-season calendar year after the reduced rate was put into effect, there were 9,032 customers, or 823 additional, which increase in customers is about the equivalent of the growth caused by the increase in population for the intervening twenty-four months' period. The total increase in sales of gas in cubic feet during the year 1916 over the year 1914 was approximately 6,894,500 cubic feet, or distributing such total additional sales over the total additional customers would be
66 approximately 8,377 cubic feet as a total for each additional customer as compared with the prior average of approximately 25,000 to 30,000 cubic feet per customer as above mentioned, and the total gross receipts from such additional customers on the above basis amounting to less than 70c. each per month, would be less than the amount required to pay the fixed charges in the investment in meters, distributing lines, etc., required

to supply said customers, the upkeep thereof and the cost of the gas consumed. 67

During the year 1915, one-third thereof was at the rate of $1.20 net per thousand cubic feet, and the balance at $1.00 net per thousand cubic feet; and during the whole of the year 1916, at the rate of $1.00 per thousand cubic feet. Therefore, the calendar years 1914 and 1916 are compared.

(d) That the gross revenue sales of gas during the calendar year 1914, during which year the net rate was $1.20, was $270,473.78, and for the calendar year 1916, during which year the net rate was $1.00, was $231,597.26, or a decrease in gross revenue of $38,876.42. The operating expenses of the company under either above mentioned rates would be approximately the same (except for the steady increase in expenses as hereinafter mentioned, and except for the occupation tax of 3% of gross revenue) so that the decrease in the company's net revenue would be at least equal to the above mentioned decrease in gross revenue. 68

(e) That the said actual experience of the company for such period of twenty months, has shown a less amount of gas sold per customer, and a revenue per customer less than that caused by the reduction in rate, and decrease in receipts for such period of $56,342.95. 69

Therefore, plaintiff alleges that notwithstanding the fact that the period since May 1st, 1915, to the present date has been one of unusual financial prosperity in the City of Lincoln, yet the results of the actual trial and test of the said $1

rate for the period beginning May 1st, 1915, and ending December 31st, 1916, instead of resulting in increased consumption and increased revenue, as the master found would result, actual experience has shown a less number of sales per customer, less revenue per customer, and a decrease in revenue to the plaintiff during such period of $56,342.95.

VIII.

That since its organization no dividends have ever been paid to the stockholders of plaintiff and that its entire receipts other than that necessary to pay operating expenses and bond interest has been used in extensions and additions to its property and is a portion of the property involved in this litigation.

IX.

That for a long time past the actual cost of labor has been advancing, and the cost of coal, oil, pipe and all other materials necessary for the operations and maintenance of plaintiff's property and plant has greatly increased and plaintiff believes will continue to advance in cost and not be reduced, and such conditions were not taken into consideration when the decree of this Court was entered, finding that the rate of return was five and twelve one-hundredths per cent. (5.12%) and that no dividends had ever been paid.

X.

Plaintiff further avers, and alleges, that there are errors of law apparent upon the face of the decree, pleadings and proceedings upon which it is based, which errors consist in the violation of the rules of law and equity and the settled prac-

tice of courts of equity in confiscatory rate cases 73
in this, to wit:

1.—The Court below dismissed the plaintiff's bill of complaint without giving the plaintiff the right to on motion reinstate the said cause with all the pleadings and evidence now on file and without giving the plaintiff the right to file such additional pleadings and take and file such additional evidence as in the light of practical experience and actual application of the rates would demonstrate whether or not said rate would prove to have been or to be so unremunerative as to be confiscatory; even though the master found in his report: 74

(a) That the plaintiff would actually receive only five and twelve one-hundredths per cent. (5.12%) return upon its investment;

(b) That no dividends had ever been paid to the stockholders of the plaintiff;

(c) That "All human experience has shown that increased consumption follows quickly a reduction in the price of commodities, and the evidence in this case satisfactorily shows that gas is no exception to the rule;" and "That with gas selling at one dollar ($1) per thousand cubic feet, plaintiff would have received since December 75
1st, 1907, when the rate ordinance was to be effective, not less than six per cent. (6%) per annum upon the value of the propery employed by it in serving the people of Lincoln."

In view of such finding, the Court, if it dismissed the bill, should have dismissed it without prejudice to reinstate the case for subsequent hearing after the one dollar ($1) rate had been put to actual trial and test.

2.—In not remanding the case as petitioned by

the plaintiff to the master, to report and find as instructed by the Supreme Court of the United States in its opinion and order as shown in 223 U. S., 349-365, where the Court says:

> "There should be a full report upon past depreciation, past expense for reconstruction or replacement and past operating expenses, including current repairs. We should be advised as to the gross receipts for recent years and just how these receipts have been expended. Then the amount to be set aside for future depreciation will depend upon the character and probable life of the property and the method adopted in the past to preserve the property. It can readily be seen that the amount to be annually set aside may be such as to forbid rate reductions because of the requirement of such a fund. The matter is one for a skilled master who should make a full report upon the value of the property, the receipts and the expenses of operation and the sum paid out for reconstruction and replacement and in dividends in recent years."

Said error apparent upon the face of the decree, pleadings and proceedings upon which it is based being in this, to wit:

That the master failed to:

(a) Make a full report upon past depreciation, past expense for reconstruction or replacement and past operating expenses, including current repairs;

(b) Ascertain the amount to be set aside for future depreciation in that no method or rate is found by the Master, but merely a certain amount of money without stating his method of calculation or reasons for so finding;

(c) To make a complete summary of the evidence, his deductions and reasons therefor, so as to fully advise the plaintiff and the Court;

(d) To make a full report upon the value of the property.

## XI.

That the plaintiff is now and has been since May 1st, 1915, collecting the rate of one dollar ($1) per thousand feet of gas furnished to consumers in the City of Lincoln.

That the said rate of one dollar ($1) is now and was from the beginning wholly inadequate, noncompensatory, confiscatory, illegal and void, and that plaintiff has sustained and is now and will hereafter sustain great and irreparable loss and injury and damage by reason of the enforcement of said one dollar ($1) rate ordinance of said City.

Plaintiff has no other plain, complete or adequate remedy at law; that the decree dismissing plaintiff's bill of complaint is contrary to the rules of law and equity practice in rate cases, in that said bill was not dismissed without prejudice and granting plaintiff the right to reopen and reinstate said cause after an actual application and trial of the one dollar ($1) rate for a reasonable period of time, and it therefore comes again into this Court where alone due and proper relief can be had.

Wherefore, the premises considered, the plaintiff prays this Honorable Court:

I.—To review its former findings, judgment and decrees in this cause;

II.—To accept and receive the proof of the facts showing the results of the actual trial and test of the said one dollar ($1) rate from May 1st, 1915, to date;

III.—To modify and set aside the decree entered herein on the 16th day of June, 1915;

IV.—To upon further proofs and hearing and determination of this cause grant to the plaintiff

82 a permanent injunction enjoining the enforcement of the said occupation tax ordinance of the City of Lincoln, passed December , 1909;

V.—To upon further proofs and final hearing and determination of this cause grant to the plaintiff the right to make the same a part of the record or amended record in this cause.

VI.—And that the plaintiff may have such other and further relief in the premises as to the Court may seem equitable and just.

CHARLES A. FRUEAUFF,
E. C. STRODE,
Solicitors for Plaintiff.

Now come the appellees in the above entitled cause and move the court to advance said cause for the reasons set forth in the following:

## BRIEF STATEMENT OF THE MATTER INVOLVED.

On November 19, 1906, the City Council of the City of Lincoln passed an ordinance reducing the net price to be charged for gas sold in said City from $1.20 to $1.00, and allowing a ten per cent penalty to be added for non-payment within six days after the rendition of bill, and a minimum charge of twenty-five cents for each service. Said ordinance was to take effect December 1, 1906. On December 27, 1906, the appellant Lincoln Gas & Electric Light Company, a corporation engaged in selling artificial gas in said City, filed its bill in the Circuit Court of the United States for the District of Nebraska, attacking said ordinance on the ground that the rate established was confiscatory and deprived the complainant of the equal protection of the law, and deprived it of its property without due process of law, and was in violation of the Fourteenth Amendment of the Constitution of the United States, and prayed an injunction restraining the City of Lincoln and the Mayor and City Attorney from enforcing or attempting to enforce said ordinance. A temporary restraining order was allowed. On April 6, 1909, a decree was entered in said cause finding no equity in complainant's bill, so far as it related to said gas rate ordinance, and said bill was dismissed and the restraining order was dissolved. On May 5, 1909, on application of complainant, the court allowed an appeal to this court, restoring the restraining order upon the complainant filing a bond with the clerk of the court in the sum of $150,000.00, for the benefit of gas consumers, conditioned that in the event the decree of the court theretofore entered should be affirmed by this court, the complainant would, on demand, pay to the parties entitled thereto, all overcharges for gas which it may have exacted in violation of said ordinance, since the date when it would have gone into effect but for said restraining order. Said bond was given and the appeal to this court was thereafter perfected.

On December 6 and 7, 1911, said cause was argued and submitted to this court on its merits, and on February 19, 1912, this court decided it on its merits, the opinion of this court being reported in 223 U. S. at page 349.

This court reversed the decree of the court below in said cause, and remanded said cause for further proceedings ordering that the same be referred to a skilled master to hear such additional evidence as the respective parties might wish to take, and to report fully his findings upon all the questions raised by either party and that upon such report the court should proceed as equity may require. It was further ordered by this court that the injunction granted in the court below continue in force until final decree upon condition that complainant enter into a new bond with satisfactory sureties to account for all overcharges in the event the ordinance shall be sustained. The required bond was thereafter given and the restraining order has been continued and is still in force.

The court below, in harmony with the mandate of this court, referred said cause to a skilled master, who took such additional evidence as was offered by the respective parties, and made his report to the district court. Exceptions to said report were filed by complainant and these were overruled by the court below and the report of said special master was in all things affirmed and approved, and a decree entered finding that there was no equity in complainant's bill so far as it related to said gas rate ordinance and dismissing said bill. Upon application of complainant an appeal to this court was allowed and the restraining order restored upon the giving of a new bond by complainant in the sum of $575,000.00, conditioned for the repayment to gas consumers of all overcharges in case said ordinance shall be finally upheld. Said bond was given and the record on appeal has been filed in this court, and is now being printed.

This cause having been once adjudicated by this court upon the merits, and having been again brought up by appeal, the appellees move the court that the same be advanced under section 4 of rule 26 of this court.

Respectfully submitted,

C. PETRUS PETERSON,

W. M. MORNING,

LINCOLN GAS & ELECTRIC LIGHT COMPANY,
Appellant,

*v.*

THE CITY OF LINCOLN, NEBRASKA *et al.*,
Appellees.

## MEMORANDUM OF APPELLANT IN OPPOSITION TO MOTION TO ADVANCE.

The appellant herein respectfully opposes the motion to advance the hearing of this appeal (at least, at the present time) for the following reasons:

This is not, we submit, a case "once adjudicated by this Court upon the merits."

This action was commenced in December, 1906, for an injunction restraining the City of Lincoln from enforcing a certain ordinance of said City

adopted in November, 1906, providing in substance that no gas company in said City should charge more than $1.00 net per M feet of gas sold. The appellant was at that time charging $1.20 per M feet of gas sold. A temporary restraining order was obtained and the Company put up a bond to reimburse the gas users of the City of Lincoln for the difference between the $1.00 rate and the $1.20 rate, in the event that the case went against the Company.

A decision was rendered by the lower Court adverse to the Company, but the restraining order was continued. An appeal was taken in the Supreme Court of the United States and the decision of the Court below was reversed by a unanimous Court, with an opinion by Mr. Justice Lurton (reported 223 U. S., 349).

This decision of the Supreme Court was not, we submit, an "adjudication upon the merits," as a consideration of said opinion will immediately reveal, for the Supreme Court decided that the record in said appeal did not contain facts sufficient to enable the Supreme Court to pass upon the questions involved. This is clearly shown by the opinion of Mr. Justice Lurton. He said (page 361):

> "This case is full of difficult and grave questions. Such conclusions as to facts as are found in the court's opinion are not helpful when, as here, errors are assigned which open up substantially the whole case. The cause should have gone at the beginning to a skilled master, upon whose report specific errors could have been assigned and a ruling from the court obtained."

And again, on pages 364-5:

> "The facts found are not full enough to at

all justify this court in dealing with this problem of a replacement fund.

"There should be a full report upon past depreciation, past expense for reconstruction or replacement, and past operating expenses, including current repairs. We should be advised as to the gross receipts for recent years, and just how these receipts have been expended. Then the amount to be set aside for future depreciation will depend upon the character and probable life of the property and the method adopted in the past to preserve the property. It can be readily seen that the amount to be annually set aside may be such as to forbid rate reductions, because of the requirement of such a fund. The matter is one first for a skilled master, who should make a full report upon the value of the property, the receipts and the expenses of operation and the sums paid out on reconstruction and replacements, and in dividends in recent years.

"For the reasons indicated, we direct that the decree be

"REVERSED, and the cause remanded to the district court to refer the case to a competent and skilled master, to report fully his findings upon all of the questions raised by either party, separately, and with leave to both parties to take any additional evidence they may wish within a time to be fixed by the court, and that that court upon such report proceed as equity shall require."

It appears, therefore, that the prior appeal in this case was not adjudicated on the merits, but, on the contrary, the Supreme Court determined that it was unable to decide the case upon the merits because the facts found were not full enough to justify the Court in dealing with the problems involved; so the case was sent back to the lower Court to be referred to a skilled master with leave

to take additional testimony, with directions to the lower Court to proceed "as equity shall require." Pursuant to this order the case went to a Master, and new and additional evidence was taken amounting to several thousand pages of testimony and a multitude of exhibits. The record on this appeal, therefore, is an entirely different one from the record in the prior appeal so that all the matters involved in this appeal will have to be taken up *de novo* by this Court. We submit, therefore, that this case has not been "once adjudicated by this Court upon the merits."

Furthermore, although this case was originally brought in order to obtain an injunction against the enforcement of an ordinance, and a temporary restraining order was granted and the enforcement of the ordinance was thus held in obeyance for a period of years upon the Company's giving a bond to reimburse the gas users of the City of Lincoln, the fact now is that the Company, on May 1st, 1915, voluntarily put into effect the $1.00 rate (although with an understanding that this should not prejudice their rights in this action). So, therefore, the question of the validity of the ordinance is now material only insofar as it relates to the reimbursement of the users of gas in the City of Lincoln for the difference between the $1.00 and the $1.20 rate during the period when the restraining order was in effect; in other words, the case now resolves itself into a simple action for a money judgment, and the only practical effect of this appeal is whether the users of gas in the City of Lincoln between December, 1906 and May, 1915, are entitled to reimbursement to the extent of 20 cents per M feet of gas used. To cover this situation the Company has filed a bond in the sum of $575,000, which

amply protects the parties in interest in the event this appeal should be determined against the Company.

So that there would appear to be no urgent necessity of an immediate disposition of this case by reason of the fact that a Municipal ordinance is being held in abeyance, but, on the contrary, the only result of the decision of this appeal is the question of the liability of the Company to make refunds to gas users who are protected both as to principal and interest by the bond filed in respect thereof.

But we submit that the most important reason why this cause should not be advanced is the following:

The $1.00 gas rate which the Company voluntarily adopted in May, 1915, has now been in effect for practically one year and a half, so that the result of the $1.00 rate is no longer a question of speculation or prophecy, but can now be determined as a question of concrete fact. This is of the utmost importance for the reason that the Special Master in making his findings, although he determined that an earning rate of 6% constituted a reasonable return upon the investment of the property, found, according to his own figures, that the Company actually earned in the year 1907 (the first year when the rate ordinance would have been in effect) only 5.12% upon its investment as he found it. But he justifies sustaining the validity of the rate ordinance on the ground that if the $1.00 rate had been put into effect an increased consumption of gas and an increase in earnings would quickly follow the reduction in price, and he concludes that with gas selling at $1.00 per M. cubic

feet the plaintiff would have received not less than 6% upon the value of its investment.

This, it will be seen, is a mere speculation or estimate as to what would have been the fact if certain conditions had been in existence. But now that the $1.00 rate has actually been in force for approximately a year and a half, there is no further necessity of speculating or estimating about the increased gas consumption, or earnings under the reduced rate, and it can now be determined beyond any question of doubt by existing facts whether the result is in accordance with the Master's conjecture.

For this reason it is the purpose of the appellant in this case to file with this Court a motion for leave to file a bill of review in order that evidence may be taken showing the exact result as regards increase or decrease in gas consumption during the last year and a half when the $1.00 rate was in effect. It is our contention that such evidence should be before the Supreme Court in order to enable it to properly pass upon the questions upon this appeal, and we believe that it will conclusively show practically no increased earnings from said reduction.

The appeal in this case was perfected October 24th, 1916, and the appellant was waiting January 1st, 1917, in order to compile figures showing the result of a year and a half's operation under the $1.00 rate. Upon the compilation of such figures the appellant intended to present its motion for leave to file a bill of review to this Court. The figures for the month of December, 1916, are not now available, but will be available in the course of a few days when the appellant will be in a position

to prepare its data for said motion for leave to file a bill of review.

In this connection we beg to point out that this Court has always deemed it of the utmost importance in determining the validity of a rate ordinance to see the effect of the actual working of said ordinance rather than to make its decision upon estimates as to what would happen if the ordinance were in effect. In the recent case of Des Moines Gas Company against Des Moines, 238 U. S., 153, this Court, although it decided in favor of the rate ordinance, concluded as follows:

> "While we agree with the court below that it was right to confirm the Master's report and dismiss the bill, we think, in view of the fact that the attack upon the rates was made before the ordinance went into effect, and before actual application of the rates could demonstrate whether they were remunerative or not, that the court should have followed the recommendation of the Master and dismissed the bill without prejudice. We think this is particularly so, in view of the fact that ordinarily time alone can satisfactorily demonstrate in a case like this whether or not the rates established will prove so unremunerative as to be confiscatory in the sense in which that term has been defined in rate-making cases. The Master's suggestion has the support of the judgment of this court in *Knoxville* v. *Water Co.*, 212 U. S., 1, and *Willcox* v. *Consolidated Gas Co.*, 212 U. S., 19.
>
> "With the modification that the bill be dismissed without prejudice, instead of, as the court below directed, with prejudice, the decree is affirmed, with costs."

So also in the Consolidated Gas Company case,

212 U. S., 19, this Court, although it decided against the Company and in favor of the rate ordinance, concluded its opinion as follows:

> "It may possibly be, however, that a practical experience of the effect of the acts by actual operation under them might prevent the complainant from obtaining a fair return, as already described, and in that event complainant ought to have the opportunity of again presenting its case to the court. To that end we reverse the decree, with directions to dismiss the bill without prejudice, and
>
> "IT IS SO ORDERED."

In the present case, therefore, inasmuch as the $1.00 rate fixed by the ordinance has been tried out by practical experience for a year and a half, it should not be necessary for the Company to bring another action to test the validity of the rate ordinance, or its liability for refunds, because all the questions which might be involved in a subsequent proceeding can now be determined as matters of fact, and we submit that it would be most expeditious and also quite in harmony with the spirit of the decisions of this Court heretofore made, to ascertain the facts presented by the actual operation of the ordinance prior to or at the time of the hearing of this appeal, and it was for this purpose that the Company intended to present its appeal to review in order that those facts might be placed before the Court.

If this case is advanced upon this motion there will be no opportunity to bring out the facts in connection with actual operation of the ordinance, and, therefore, we submit that this motion should be denied, or, in any event, it should be held in

abeyance until the appellant had an opportunity to present its motion for leave to file a bill of review, in respect to the matters above set forth, which motion the appellant hereby agrees to present with all diligence, if given opportunity so to do, just as soon as the earnings for the month of December, 1916, are available.

Respectfully submitted,

CHARLES A. FRUEAUFF,

Counsel for Appellant.

# Supreme Court of the United States

|---|---|
| LINCOLN GAS & ELECTRIC LIGHT COMPANY, Appellant. *v.* THE CITY OF LINCOLN, *et al.*, Appellees. | October Term, 1917. No. 300. |

**PETITION FOR LEAVE TO FILE BILL OF REVIEW IN COURT BELOW OR TO TAKE FURTHER PROOF.**

To the Honorable the Justices of the Supreme Court of the United States:

Now comes Lincoln Gas & Electric Light Company, a corporation, appellant, and respectfully renews its motion for leave to file a bill of review in the Court below in this case, heretofore made to this Honorable Court on or about the 26th day of March, 1917, and prays for leave to take further proof upon all the grounds and for all the reasons set forth in the motion papers heretofore filed in said motion to this Court, made on or about March 26th, 1917, and for further reason in support of said motion appellant avers and shows that the figures showing the result of the actual operation of the $1.00 gas rate in the City of Lincoln, since January 1st, 1917, and up to September 1st, 1917, are now available, and appellant desires to present

the evidence of the actual operation during said months, in order that this Honorable Court may have the same before it when considering the matters of value and return embraced in the record now on file in this appeal, and in considering its decree to be entered herein.

That the bill of review which appellant now petitions leave to file is in substantially the form presented in the motion papers on or about March 26th, 1917, with such modifications as will permit the taking of testimony showing the actual operation of the $1.00 gas rate between January 1st, 1917, and September 1st, 1917.

That appellant files herewith the affidavit of Edgar E. McWhiney, Assistant Secretary of appellant, showing the earnings of appellant since January 1st, 1917, up to which date the same were set before this Honorable Court in said previously filed bill of review, and that said affidavit shows the operating expenses of appellant to have reached a point so that the same are in excess of the price charged for gas, that is, without allowing for any depreciation whatsoever or for any allowance whatever for return upon invested capital, or without any allowance whatever for the Occupation Tax in issue in said proceedings, the $1.00 rate for gas is insufficient to pay appellant's actual operating expenses.

That the appellant, since the taking of the testimony in the Court below, and up to the present time, has in all things handled its property in a proper, customary and economical manner, and has paid out no dividends, and has kept its books and records of account according to the same manner and system as heretofore, and as during the period when the evidence was taken in the Court below.

That in view of the established practice in this Honorable Court, in respect of cases involving rate

litigation, and in which it shall have been determined by this Honorable Court to dismiss a bill to enjoin rate legislation, that the same be dismissed without prejudice, until the application of the rates can be demonstrated by an actual trial and test, appellant begs leave to point out to this Honorable Court that the rate in litigation in this case has been in effect for approximately two years and five months, that it has had an actual trial and test, and the results of its application can now be successfully demonstrated. So that there is now available to place in the record of this case before this Honorable Court the facts shown by an actual trial of this rate, and that it is unnecessary, therefore, for the Court to wait further for any demonstration of the actual application of the rate. In view of this situation, appellant submits to this Honorable Court that it is most expedient, in view of the established practice of this Court, to have placed the facts shown by the actual trial and test of the rate before this Court, rather than to consider the record as it now stands, without a complete report of the actual facts which result from the application of the rate, or to make any disposition of this case which would require the presentation of a new petition or a reinstitution of the action in order to prove the facts shown by the actual trial of the rate. The actual showing of the complete confiscation of appellant's property should be before this Honorable Court for its information in determining the many matters involved on this appeal.

Wherefore, by reason of said subsequent happenings in the nature of newly discovered evidence and happenings subsequent to the entry of the decree in the Court below, and for all the reasons hereinbefore stated, and as set forth in said prior motion of March 26th, 1917, appellant prays that:

1. Further proof be ordered to be taken by this

Court, by depositions to be taken by a Commission to be issued either from this Court or the Court below, pursuant to Subdivision 1 of Rule XII of the rules of this Honorable Court.

2. In the alternative, that it be permitted to file in the United States District Court for the District of Nebraska, Lincoln Division, its bill of review in substantially the form presented to this Honorable Court on or about March 26th, 1917, with such modifications as are necessary to include the evidence which has developed between January 1st, 1917, and September 1st, 1917, or such other and further supplemental bill in the nature of a bill of review as may be proper to bring to the attention of the Court below and to this Honorable Court the result of the trial and test of said gas rate of $1.00 net per thousand cubic feet, and that it be permitted to take testimony bringing its earnings and other matters involved down to the latest practicable date.

3. This cause be continued on the docket of this Honorable Court until the proofs are taken in either of the manners aforesaid and brought upon the record of this cause in this Honorable Court.

4. This Honorable Court may order the Court below to make, or cause to be made, such definite decisions and findings as will correct upon the record the alleged errors of law apparent upon the face of the record, as set forth in the motion papers of March 26th, 1917.

And the appellant prays for such other and further and appropriate relief as to this Honorable Court may seem proper.

EDMUND C. STRODE,
CHARLES A. FRUEAUFF,
Solicitors for Appellant.

ROBERT BURNS,
Of Counsel.

State of New York,
County of New York, } ss.:

Frank W. Frueauff, being first duly sworn, deposes and says that he is President of Lincoln Gas & Electric Light Company; that he has read and knows the contents of the foregoing pleading and petition for leave to file bill of review; that he has personal knowledge of the facts referred to therein relating to the trial and test of the said gas rate; that he had no knowledge of said facts at the time of the hearing of the cause below, or when the original decree was entered upon the 15th day of June, 1915; that such facts have come to his personal knowledge since the original decree was entered in this case upon the 15th day of June, 1915, and that said facts could not have been discovered in the exercise of reasonable diligence, and could not have been produced nor possibly have been used at the time when the decree was passed, and that the statements, allegations and averments of fact in the foregoing pleading, and the bill of review therein mentioned, are true. And further affiant sayeth not.

SUPREME COURT OF THE UNITED STATES.

| | |
|---|---|
| LINCOLN GAS & ELECTRIC LIGHT COMPANY, Appellant. *v.* THE CITY OF LINCOLN, *et al.*, Appellees. | Affidavit. |

State of New York, County of New York, } ss.:

Edgar E. McWhiney, being first duly sworn, deposes and says that he is Assistant Secretary of Lincoln Gas & Electric Light Company, and has examined the records and reports of the Lincoln Gas & Electric Light Company, and has familiarized himself with them, for the purpose of securing the figures for this affidavit, and has examined the affidavit of V. L. Board, submitted with the papers on the motion made to the Supreme Court of the United States on March 26th, 1917, in this cause; that he has carefully checked over the same and states as follows:

That beginning approximately from May 1st, 1915, Lincoln Gas & Electric Light Company has billed customers for gas consumed at the rate of $1.00 net per thousand cubic feet; that the rate of gas consumed prior thereto and for the period of about eight years or more had been $1.20 net per thousand cubic feet.

Affiant states that the expenses of the Company have been steadily increasing in almost all items; that the costs of labor, coal, gas, oil and all materials involved in gas making and distribution have largely increased in cost since January 1, 1917, the date of the last figures included in the said affidavit

of said V. L. Board, and that the last complete month of operation is the month of August, which shows that the total sales of gas in the City of Lincoln were 18,975,400 cubic feet, that the operating expenses for such month (not including the 3% Occupation Tax, nor any amount for depreciation whatsoever) were $19,090.88. If said Occupation Tax and a sum for depreciation, at the rate allowed by the Master for 1912, were calculated and added to said expenses, the operating expenses for said month would be $20,667.18. In said sums, as expenses, there is not included any sum whatsoever for any allowance for return on invested capital, and any return to which appellant is entitled on invested capital would be a loss in addition to the amount by which the operation expenses exceed revenue.

That the operating expenses for the month of August per thousand cubic feet of gas sold (without calculating the 3% Occupation Tax or depreciation, or any return on invested capital) were $1.0061; that said operating expenses per thousand cubic feet of gas sold, including depreciation (but not including the 3% Occupation Tax for said month, or any return on invested capital) were $1.0588; that said operating expenses per thousand cubic feet of gas sold for said month, including depreciation and the 3% Occupation Tax (but not including any return on invested capital) were $1.0892.

That the above figures show that gas is now being sold in Lincoln for a price actually less than operating cost, with no allowance whatsoever for return on invested capital, and this fact is true even if depreciation and the 3% Occupation Tax are not included as operating charges.

That the cost of operation is steadily increasing, is shown by the operating expense per thousand cubic feet of gas sold since January 1st, 1917, in-

cluding Occupation Tax and depreciation, a tabulation of which is as follows:

| 1917 | Operating Cost per M Cu. Ft. |
|---|---|
| January | $.8516 |
| February | .7724 |
| March | .8655 |
| April | .8230 |
| May | .8844 |
| June | .9044 |
| July | 1.0046 |
| August | 1.0892 |

The above operating expenses include no allowance whatsoever for return on invested capital.

Affiant further states that since the organization of this Company no dividends whatever have been paid to its stockholders, nor have any unusual or extraordinary expenses of any kind or character whatsoever been made; that since the passage of the rate-fixing Ordinance, and since the taking of the testimony before the Master, and since the perfection of the appeal in this case, the business of the Company has been carried on in its usual, customary and ordinary manner, and that its books and records of account have been kept according to the same method and system as at the time the evidence was taken in this case.

EDGAR E. McWHINEY.

### ON THE MOTION TO ADVANCE.

It is the contention of appellees that this case comes within Section 4 of Rule 26 of this court, which reads :

> "Cases once adjudicated by this court upon the merits, and again brought up by writ of error or appeal, may be advanced by leave of the court on motion of either party."

The first appeal was from a final decree of the court below. The case was briefed, argued, and submitted to this court on its merits. The only thing before the court for adjudication was the case upon its merits. The opinion of this court by Mr. Justice Lurton (223 U. S. 349) shows that the court went into the merits of the case, and reversed the decree of the lower court and remanded the cause with specific directions to refer it to a special master to report fully his findings upon all questions raised by either party with leave to both parties to take such additional evidence as they might desire.

This was not a final disposition of the case, it is true, but it was an adjudication or judgment on its merits. The word "merits" is used in law to distinguish matters of substance from technical or collateral matters raised in the course of the suit.

*Taylor* v. *Carr*, 125 Tenn. 235, Ann. Cas. 1913 C. 155, 141 S. W. 745.

*N. P. R. Co.* v. *Barlow*, 126 N. W. 233, 20 N. D. 197, Ann. Cas. 1912 C. 763.

*People* v. *Lyman*, 65 N. Y. S. 1062.

In *Ayres* v. *Polsdorfer*, 187 U. S. 585, 47 L. Ed. 314, this court in determining a question of jurisdiction had occasion to pass upon the meaning of the expression "upon its merits," as used in an earlier opinion of this court. Interpreting the expression, Mr. Justice McKenna said:

> "The expression 'upon the merits' was used in distinction to the review of a question of jurisdiction strictly so called—the right of the circuit court to entertain the case at all."

The term "merits" was similarly explained in *Russell* v. *Whitcomb*, 14 S. D. 426, 85 N. W. 860, where it was said:

> "Under Comp. Laws, Sec. 5236 Subd. 4, providing that an order involving the *merits* of an action, or some part

thereof, is appealable, an order appointing a referee to hear and determine all issues is appealable."

See also:

*St. Paul, etc. R. Co.* v. *Gardner,* 19 Minn. 132.

A cause is submitted to a court "on the merits" when the submission involves matters of substance as distinguished from matters of form; when the substantive rights of the parties are presented as distinguished from technical or collateral matters.

27 *Cyc.,* 483.
3 *C. J.,* 451.
*Ordway* v. *Boston, etc., R. Co.,* 69 N. H. 429, 45 Atl. 243.
*Clanson* v. *Gunnison,* 12 Wis. 528 (529).
*Plano Mfg. Co.* v. *Kaufert,* 86 Minn. 13, 89 N. W. 1124.
*Hirschbach* v. *Kitchum,* 80 N. Y. S. 143.

The word "adjudicated" as used in the rule under consideration, is synonymous with "judicially determined" or "adjudged."

1 *C. J.,* 1236.
*Western Assur. Co.* v. *Klein,* 48 Neb. 904 (908).

In short the cause was submitted to this court on its merits and a judgment of reversal was entered. It was not necessary for the judgment of this court to be a final disposition of the case to bring it within the rule. To hold otherwise would be to abrogate the rule itself because, if finally disposed of, it would not come here the second time.

## AS TO THE APPLICATION FOR A BILL OF REVIEW.

The only reason assigned by appellant as a ground for such a bill is that on May 1st, 1915, it voluntarily put the one dollar gas rate into effect; that it has operated under that rate ever since and now has figures based upon actual experience to show that the rate is not compensatory. This does not entitle appellant to a bill of review for the following reasons:

1. The new rate referred to was put into effect May 1, 1915, under a written stipulation between the parties which expressly provided that the action of appellant in installing said rate should not be used in any way by either party to influence the action of the court in the disposition of this case. The stipulation was as follows:

"IN THE UNITED STATES DISTRICT COURT IN AND FOR THE DISTRICT OF NEBRASKA, LINCOLN DIVISION

STIPULATION

Lincoln Gas & Electric Light Company, a corporation, Complainant,

vs

City of Lincoln, et al., Defendants.

It is stipulated and agreed between the parties hereto that the action of the Lincoln Gas & Electric Light Company in inaugurating a new gas rate as of May 1st, 1915, of $1.15 gross with a net rate of $1.00 per 1,000 cubic feet for gas if paid within the discount period, shall not be considered or construed as an acceptance of or compliance with the gas ordinance of 1906, the validity of which is involved in the above entitled cause; and the action of the Gas Company in establishing such a new rate shall not be shown in evidence or presented to the court in the above entitled cause, or used in any way by either party to influence the action of the court in the disposition of the case involving the validity of said 1906 gas ordinance.

(Signed) FRED C. FOSTER,
W. M. MORNING,
*Attorneys for City of Lincoln.*

E. C. STRODE,
*Attorney for Lincoln Gas & Electric Light Company.*

2. The appellant could and should have tried out this new rate at the start so as to base its action upon actual experience rather than upon theory, speculation and prophecy. That is what this court has always indicated should be done.

See:

*Wilcox* v. *Consolidated Gas Co.*, 212 U. S. 19, 53 L. Ed. 382.

*Knoxville* v. *Knoxville Water Co.*, 212 U. S. 1, 53 L. Ed. 371.

But appellant attacked the rate before it was put to a practical test, and litigated it from December 1906 to May 1, 1915, almost nine years, before giving the rate a trial. Having thus chosen its own time and mode of attack, and having, from the start, elected to rest its case upon theory and speculation, it cannot now call to its aid a practical test of the rate which should have preceded its attack.

In the language of Mr. Justice Moody, in *Knoxville* v. *Knoxville Water Co., supra:*

> "If a Company of this kind choses to decline to observe an ordinance of this nature and prefers rather to go into Court with the claim that the ordinance is unconstitutional, *it must be prepared to show to the satisfaction of the Court that the ordinance would necessarily be so confiscatory in its effect as to violate the constitution of the United States.*"

3. A bill of review will not be granted for newly discovered evidence unless it be shown that the evidence was not known *and could not with reasonable diligence have been known before the decree complained of was entered.*

*Beard* v. *Burts,* 95 U. S. 434, 24 L. Ed. 485.
*Nickle* v. *Stewart,* 111 U. S. 776, 28 L. Ed. 599.
*Pool* v. *Nixon,* 9 Pet. 770, 9 L. Ed. 305.
*Hill* v. *Phelps,* 101 Fed. 650.
*Camp Mfg. Co.* v. *Parker,* 121 Fed. 195.
*Kelly Bros.* v. *Diamond Drill & Match Co.,* 142 Fed. 868.

When complainant attacked this rate it did so with full knowledge of the importance attached by this and other courts to a practical test of an established rate. It was well aware of the heavy burden it assumed in attempting to strike down this rate in advance of a practical test. It is not now in a position to appeal to a court of equity for leave to do what it could and should have done in advance. It should not be permitted now to "amend its hold" by calling to its aid that which was within its easy reach at the beginning.

See:

*Scotten* v. *Littlefield*, 235 U. S. 407, 59 L. Ed. 289.

Leave to file a bill of review can only be obtained from the court in which the decree was rendered.

*Camp Mfg. Co.* v. *Parker*, 121 Fed. 195.

4. By appellant's own confession it will be seen that nothing is now involved in this litigation aside from the question of whether the appellant shall refund to gas consumers the amount collected from them in excess of the $1.00 rate during the time the same was suspended by the injunction herein. The $1.00 rate has been in force only since May 1, 1915. All of the experience of appellant as to the practical application of that rate has been acquired since that date, whereas, the refunds to gas consumers here involved all accrued prior to that date. It could have little if any bearing upon the validity of the rate in December, 1906.

We understand the rule to be that all rates established by rate-making bodies are subject to revision to meet the exigencies of changing conditions. A rate may be too low when adopted, and, if satisfied of that fact, this court will enjoin its enforcement until such time as it can be shown that conditions have so changed as to render the rate compensatory, and will permit the public to make such showing, as was done in *Smyth* v. *Ames*, 169 U. S. 819, 42 L. Ed. 819.

On the other hand, in cases where injunctions against established rates have been denied, this court has uniformly adhered to the practice of dismissing the bill without prejudice so as not to preclude the complaining party from again attacking the rate if future conditions or experience shall justify such attack.

*Des Moines Gas Co.* v. *Des Moines*, 238 U. S. 153, 59 L. Ed. 1244.

*Knoxville* v. *Knoxville Water Co.*, 212 U. S. 1, 53 L. Ed. 371.

Any experience gained by the Company through its belated practical test of the $1.00 rate since May 1, 1915, is so remote in time as to have little, if any, evidential value as to the validity of the rate between 1906 and May, 1915, and would not be sufficiently pertinent and controlling to justify a bill of review.

See:

*Society of Shokes* v. *Watson*, 77 Fed. 512.
*Jourhnond* v. *Ewing*, 85 Fed. 103.
*Keith* v. *Alger*, 124 Fed. 35.

5. If complainant wishes to attack the present $1.00 rate because changing conditions have rendered that rate inadequate, it can call to its aid the practical result of the operation of that rate since May 1, 1915, but its attack would be either by a new bill or a supplemental bill filed in the court below. Evidence of how the rate is now operating would serve no purpose in an inquiry as to how it would have operated ten years ago. It would not tend to shed light upon the same controversy.

Newly discovered evidence as a basis for a bill of review must relate to the matter controverted on the original hearing.

*Poole* v. *Nixon*, 9 Pet. 770, 9 L. Ed. 305.
*Thompson* v. *Wooster*, 114 U. S. 104, 29 L. Ed. 105.
*Shelton* v. *VanKleeck*, 106 U. S. 532, 27 L. Ed. 269.
*Accord* v. *Western Pocahontas*, 174 Fed. 1019.

6. Under no circumstances should the experience of the appellant with the $1.00 rate be permitted in any manner to influence the disposition of the present appeal. Under every rule and principle of appellate procedure the appeal must be determined upon the record as brought from the court below. We do not know what figures appellant is prepared to produce as the result of its experience with this new rate since May 1, 1915, but we do know that such figures were not before the court below; that they have all arisen since the Master's report was filed; that no opportunity has been given the City

of Lincoln to investigate and analyze these figures, and that they would be very misleading without a thorough and painstaking analysis.

As we understand it, permission to appellant to file a bill of review would be equivalent to the granting of a new trial of the case, and this, under all the circumstances, and in view of the long years of tedious and expensive litigation to which the City has been subjected is unthinkable, especially since appellant could and should have made its practical test of the rate at the start.

Respectfully submitted,

GEORGE W. BERGE,
WILLIAM M. MORNING,
*Counsel for Appellees.*

Statement ..... 1

PRELIMINARY DISCUSSIONS.

History of the Case ..... 4
Reported Should be Recommitted to Master ..... 6
Findings of the Master are Not Conclusive upon this Court .. 11
Assignment of Errors ..... 12

POINT I.

The repeated and persistent attacks of the City on the Company, reducing and depleting its revenues, running through a course of years, is to be considered in determining when, if ever, the Company will be able to recoup losses already sustained in its revenues ..... 35

POINT II.

Rate of Return ..... 42

POINT III.

The City of Lincoln, after the passage of the Gas Rate Ordinance in question, and the institution of this suit to enjoin its enforcement by the Company, caused to be instituted an action in the State Court to eject the Company from the streets and prevent it from further continuing in business in Lincoln, claiming that the Company's franchise, under which it manufactured and distributed gas in the City, had expired, and that its right to continue in the business had ceased and terminated .. 54

POINT IV.

Going Value ..... 64
The Master's allowance of going value is inadequate, and not in the amount established by the evidence .. 67
The Master found $140,000 of going value, but erred in eliminating $100,000 thereof ..... 70

Page

The evidence shows no excess earnings in the past.... 73
The Master is in error in respect of the underlying doctrine of rate regulation referred to in the propositions heretofore summarized..... 77
The Master indicated no basis for the determination of going value ..... 88

POINT V.

Valuation for 1907..... 92
(1) Mathematical Error of the Master..... 92
(2) Master's 1907 Valuation Not Supported by the Evidence ..... 96

POINT VI.

The Master's valuation of the Company's properties as of January 1, 1913, is unsupported by the evidence and is clearly wrong ..... 106

POINT VII.

| LINCOLN GAS & ELECTRIC LIGHT COMPANY, Appellant, *v.* THE CITY OF LINCOLN *et al.*, Appellees. | October Term, 1917. No. 300. |

## BRIEF OF APPELLANT.

### Statement.

This is an appeal from the judgment of the United States District Court for the District of Nebraska, Lincoln Division, which confirmed a report of a Special Master to whom this case was referred.

This action was instituted in December, 1906, by appellant against The City of Lincoln, and others, praying for the following relief:

(1) For an injunction restraining the City of Lincoln from enforcing a certain ordinance, No. 432, of said City, adopted on or about November 19th, 1906, providing, in substance, that no gas company in said City shall charge more than $1.00 net per M cubic feet of gas sold;

(2) For an injunction restraining the City from enforcing a certain ordinance of said City, adopted on or about December 10th, 1906, which purports to pro-

vide for and assess an occupation tax upon all gas companies in the City of Lincoln.

The action also necessitates the determination of the construction and validity of the company's franchise rights in the City of Lincoln, and a decision as to whether or not said franchise is a perpetual one.

At the outset, we beg to call the attention of this Court to the fact that the decision in this case is a matter of the gravest concern to the appellant. We state, without fear of contradiction, that it is a veritable struggle on behalf of the company for its continued existence, and in the event that the judgment of the Court below is affirmed, it is a serious question as to whether or not the company can successfully maintain its operations and the service in which it is engaged. That we are not exaggerating the situation can be illustrated by a mere glance at the conclusion which is reached by the Master and confirmed by the Court below:

1913 VALUATION.

| As fixed by Master | As fixed by Company |
|---|---|
| $676,565. | $1,090,913. |

Net Earnings for 1912 at One Dollar Rate.

| As fixed by Master | As fixed by Company |
|---|---|
| $46,658. | $21,817. |

1907 VALUATION.

| As fixed by Master | As fixed by Company |
|---|---|
| $436,565. | $784,682. |

Net Earnings for 1907 at One Dollar Rate.

| As fixed by Master | As fixed by Company |
|---|---|
| $22,349. | $17,663. |

The Master fixed the value of the properties of the appellant devoted to the service of the public in the City of Lincoln, in 1912, at $676,565. During the pendency of this litigation, a preliminary injunction was in force against the operation of the Rate Ordinance, dur-

ing a great part of which time the company has been collecting $1.20 per M cubic feet of gas sold, and the company has given a bond fixed and approved by the Court for the return of the extra 20c. per M cubic feet, in the event this case is decided against the company. This amount which the company will, in such event, be obligated to repay to gas consumers, and for which it has given its bond, is now $525,000. The difference between the total value of the plant, in 1912, as fixed by the Master and confirmed by the Court below, and the amount necessary to reimburse consumers in the event of an affirmance, is $151,565, which is all that would be left the company in the event of an adverse decision of this Court. And this is true in spite of the Master's findings that the company has never paid any dividends on its stock, and that its entire earnings have been utilized in paying operating expenses, bond interest, and in making improvements and additions to its properties (which are included in the Master's valuation).

This result is so astounding that it must, we submit, challenge the attention of this Court to the grave injustice which the company has borne by reason of the decision of the Master and the confirmation of his report by the Court below.

The institution of this action was forced upon the company by a campaign of aggression on the part of the City toward the company, beginning about the year 1904. In the early part of the year 1906, the City passed a Gas Quality and Pressure Ordinance, which materially increased the cost of manufacture of gas, and correspondingly reduced revenue. This was followed, in November of that year, by the ordinance attempting to reduce the rate for the sale of gas above referred to, and in December, 1906, by the Occupation Tax Ordinance. The company then commenced this action to

prevent the confiscation of its properties. As expressed by Mr. Justice Holmes, on the argument before this Court at the prior appeal, "The City was putting the screws on the company."

**History of this Case.**

The trial of this action was commenced in 1908, before Munger, D. J., whose decision on the question of the validity of the ordinance (which involved a valuation of the company's properties and a determination of its return upon its investment) was adverse to the company, and the bill as to the Rate Ordinance was dismissed.

An appeal was thereupon taken to the Supreme Court of the United States, and the decision of the Court below was reversed by a unanimous Court, with an opinion by Mr. Justice Lurton (reported 223 U. S., 349). The decision of the Supreme Court in this action is exceptional, in that it is one of the few cases in history where a judgment sustaining a rate ordinance has been reversed. It is important, also, because the reasons for reversal are so pertinent to the questions now before the Court.

Mr. Justice Lurton first presents a concrete statement of the issues presented by such a case. He said (p. 357):

> "In this, as in every other legislative rate case, there are presented three questions of prime importance: First, the present reasonable value of the company's plant engaged in the regulated business; second, what will be the probable effect of the reduced rate upon the future net income from the property engaged in serving the public; and, third, in ascertaining the probable net income under the reduced rates prescribed, what deduction, if any, should be made from the gross re-

ceipts as a fund to preserve the property from future depreciation."

He then discussed the estimated value as found by the Court below, which was stated in the form of itemized conclusions, setting forth fixed amounts with practically no discussion of the evidence upon which the conclusions were based. This method of merely stating conclusions lead Mr. Justice Lurton to remark (p. 361):

> "This case is full of difficult and grave questions. Such conclusions as to facts as are found in the Court's opinion are not helpful when, as here, errors are assigned which open up substantially the whole case. The cause should have gone at the beginning to a skilled master, upon whose report specific errors could have been assigned and a ruling from the Court obtained."

And again, on pages 364-5:

> "The facts found are not full enough to at all justify this Court in dealing with this problem of a replacement fund.
>
> "There should be a full report upon past depreciation, past expense for reconstruction or replacement, and past operating expenses, including current repairs. We should be advised as to the gross receipts for recent years, and just how these receipts have been expended. Then the amount to be set aside for future depreciation will depend upon the character and probable life of the property and the method adopted in the past to preserve the property. It can be readily seen that the amount to be annually set aside may be such as to forbid rate reductions because of the requirement of such a fund. The matter is one first for a skilled master, who should make a full report upon the value of the property, the receipts and the expenses of operation and the sums paid out on reconstruction and replacements, and in dividends in recent years.
>
> "For the reasons indicated, we direct that the decree be

> "*Reversed*, and the cause remanded to the District Court to refer the case to a competent and skilled master, to report fully his findings upon all of the questions raised by either party, separately, and with leave to both parties to take any additional evidence they may wish within a time to be fixed by the Court, and that that Court upon such report proceed as equity shall require."

It is obvious, therefore, that what the Supreme Court wanted was a careful consideration by a skilled master, whose report should be *full* and *complete*, and should show not only his *conclusions*, but his *reasons;* not only his *final results* in *dollars*, but his *method* of *calculation* and his justification for adopting the same.

**Report Should Be Recommitted to Master.**

The reason for our discussion of this matter at the outset of this brief is, that it is our contention that the instructions of this Court in its former decision have not been carried out, in spite of all the efforts of the Company in respect thereof. We now maintain that in spite of the mass of testimony which the Company took pains to introduce, as well as the testimony introduced by the City's witnesses, that still "the facts found are not full enough to at all justify this Court" in dealing with the various problems which this appeal presents; that there is not "a full report upon past depreciation, past expense for reconstruction or replacement, and past operating expenses, including current repairs;" nor is there a report upon "the character and probable life of the property," and in no sense is the report which the Master has made a "full report upon the value of the property." It has been the Company's position, and still is its contention, ever since the report of the Master was filed, that the report should be recommitted to the Master for further findings of fact, in order that he

be compelled "to report fully his findings upon all of the questions raised by either party separately," which he has obviously failed to do. A motion to this effect was made by the Company, but was denied (Transcript, pp. 74 and 75).

We maintain that it is clear from the Master's report that he has completely misunderstood the purpose for which he was appointed, as his report clearly indicates. He said at the outset of his report, under the heading, Preliminary Observations: "A summarization of this evidence is quite impossible, and would, as far as I can see, aid neither Court nor counsel in testing the correctness of the conclusions which I have reached" (Transcript, p. 36). It is quite obvious that such a summary is not "impossible," because it has been done by the various special Masters who have been appointed in rate cases which have heretofore come before this Court; and it is equally clear that it would materially aid both Court and counsel, and, in fact, this case was sent back by this Court for the very purpose of adopting a course which the master states he has determined not to pursue. He states further, "to give the names of witnesses, together with what I might conceive to be a fair condensation of their testimony upon any controverted point, would, as I view it, be altogether valueless" (Transcript, p. 36). We think this statement is particularly significant, in view of the testimony introduced by the various witnesses in this case. A great part of the City's testimony on valuation was introduced through a witness, whom the City made its principal witness. He was one Alton D. Adams, whom the City put forward as an expert in valuation of properties of this class. Not only was Mr. Adams' right to speak as an expert on these matters constantly challenged throughout the course of the hearings before the Master, but his good faith and veracity were continually assailed

by counsel for the Company, and it was maintained by them that his testimony was worthless and should have been completely disregarded by the master. In view of this issue which was thus so sharply raised, we submit that we were entitled to an expression of opinion from the Master as to just what value he placed on the testimony of the City's witness, Mr. Alton D. Adams, and just how far the master's conclusions were affected by that testimony. The Master does not give us this information; instead, throughout his report he merely mentions the two figures of valuations for the various items of property and equipment, one given by the City's witness, Mr. Alton D. Adams, and the other by the company's witness, Mr. Henry I. Lea, and in the great majority of instances, the master, without discussion or without giving reasons, strikes somewhere between the two figures in reaching his conclusions.

This method of reporting findings is, we insist, not in accordance with the instructions of this Court, especially in view of the questions raised as to the particular witness's competency and reliability.

The Master further says: "The evidence, which is for the most part, opinion evidence, and generally unreconcilable, makes my conclusions in regard to values, at best, nothing more than fair approximations" (Transcript, p. 36).

We repeat, that in view of the fact that the testimony of the opposing experts was "unreconcilable," and the right of one of those experts to speak as such was directly challenged, it was especially incumbent upon the Master to give his views as to the weight which should be attached to the testimony of the opposing witnesses, and how much he was influenced by the opinions of each. Otherwise, it is impossible to test the correctness of his conclusions.

Similarly, in arriving at his conclusions as to the proper percentage for overhead charges, he says:

> "Just what it should be is a question about which there is much difference of opinion among engineers, courts and commissions. In this case Mr. Lea puts it at sixteen per cent., and Mr. A. D. Adams at seven per cent. The matter is not governed by any inflexible rule, but is to be determined in every case by the exercise of good sense and sound discretion. * * * * My judgment upon the matter is that an allowance of twelve and one-half per cent. on the total net construction cost of the physical property, excepting real estate and working capital, is sufficient to cover all overhead expenses, including engineering, superintence, legal expenses, taxes, interest during construction, ommissions and contingencies, casualty liability, and whatever else is usually classified under this caption. This is necessarily an estimate based almost entirely upon expert testimony." (Transcript, pp. 37 and 38.)

The difference between seven per cent. and sixteen per cent. for overhead charges constitutes a great divergence of opinion. One or the other of the experts before the Master must have given testimony which was wide of the mark; but the Master gives no intimation as to whose testimony he relied upon, nor does he segregate his total percentage so that we can scrutinize and analyze the various items which together make up the aggregate and determine how much should be apportioned to each element of overhead. These were matters which were gone into exhaustively in the testimony, and each witness was examined and cross-examined at great length upon the subject. Again, in his findings on the value of Works Equipment the Master says:

> "The evidence of values comes principally from the experts, Lea and Adams, and clashes irreconcilably

> at almost every point. In considering the evidence of these experts, I have been aided, of course, by the testimony of other witnesses, and by reports, letters, bills, contracts, vouchers, and other documentary proofs. Upon every disputed item all the evidence, oral or written, which I have been able to find in the record, has been examined, considered and given in the decision reached, its proper weight of influence. After ascertaining the reproduction cost, which is in the aggregate $198,868, and making proper deductions for depreciation, I present here, without discussion of the evidence, my conclusion that the present value of the 73 units which compose this division of the Company's property is $179,310." (Transcript, p. 40.)

The values which the Master finds are, in almost every case, somewhere between the value of Mr. Lea and Mr. Adams. If the evidence of these two witnesses "clashes irreconcilably at almost every point," it is, we submit, the duty of the Master to give some inkling in his report as to what evidence he relied upon, and to summarize the various unit costs which he used in arriving at his conclusions (that is, if he used any unit costs), rather than merely to assure us that all the evidence has been "given * * * its proper weight of influence."

In concluding these remarks as to the Master's method of reporting his findings in the form of general conclusions, we beg to reiterate that such a method was not in accordance with the Court's instructions, and that, furthermore, this method puts the party who is objecting to the Master's findings in an unfavorable situation, because that party is unable to fully analyze the Master's conclusions and point out where they are in error. We hesitate to say that the Master's report was couched in general terms deliberately in order to hinder analysis, but we will state, and we will stand ready to prove affirmatively, that in those instances in

the Master's report where he gives us enough figures for a basis of comparison and analysis, it clearly appears that his findings were not based upon the evidence at all, but were mere figures picked at random somewhere between the estimates of Mr. Lea and Mr. Adams, the result of which is a conclusion which is not supported by any testimony whatsoever. These instances will be given later in this brief. But we wish to here renew our former demand that the Master's report should be recommitted to him for complete findings, in accordance with the instructions of this Court.

**Findings of the Master Are Not Conclusive Upon This Court.**

This Court is not concluded by the findings of the Master, even though the same are confirmed by the Court below, where specific assignments of error raise questions involving the correctness of the findings, as shown by the evidence.

This principle was recognized in the case of Knoxville v. Knoxville Water Company, 212 U. S., 1, in which action the validity of a rate-making Ordinance was challenged, and the case came to the Supreme Court after having been referred to a Master whose findings were confirmed by the Court below. In that case Mr. Justice Moody said, that in view of the character of the judicial power invoked in such cases, it was not tolerable that its exercise should rest securely upon the findings of a Master, even though they be confirmed by the Trial Court; that this power was best safeguarded against abuse my preserving to the Supreme Court of the United States complete freedom in dealing with the facts of each case; that nothing less than that was demanded by the respect due from the judicial to the legislative authority. The Court made it clear, however, that the findings of a Master, confirmed by the

Trial Court, were not without weight, or that, as a practical question, they would not sometimes be regarded as conclusive, but it was definitely decided that in cases of this character the United States Supreme Court would not fetter its discretion or judgment by any artificial rules as to the weight of a Master's findings, however useful and well settled those rules may be in ordinary litigation.

**Assignment of Errors.**

The assignment of errors relied upon in this appeal are as follows:

I.

That the District Court of the United States for the District of Nebraska, Lincoln Division, erred in dismissing plaintiff's complaint in so far as it relates to the ordinance of the City of Lincoln establishing a rate of charges for gas in said city.

II.

That the District Court of the United States for the District of Nebraska, Lincoln Division, erred in dissolving the restraining order theretofore granted by said court against the enforcement of the ordinance of the City of Lincoln establishing a rate for charges for gas in such city.

III.

That the District Court of the United States for the District of Nebraska, Lincoln Division, erred in approving the special master's report and overruling the plaintiff's exceptions thereto.

IV.

That the District Court of the United States for the District of Nebraska, Lincoln Division, erred in not

finding and decreeing that the ordinance set out in plaintiff's bill, establishing the rate to be charged for gas in the City of Lincoln would be a violation of Article V of Amendments to the Constitution of the United States, in that by the enforcement of said ordinance, the plaintiff would be deprived of its property without due process of law.

V.

That the District Court of the United States for the District of Nebraska, Lincoln Division, erred in not finding and decreeing that the ordinance set out in the complaint establishing the rate to be charged for gas in the City of Lincoln, to be a violation of Article V of the Amendments to the Constitution of the United States, in that by the enforcement of said ordinance, the private property of the plaintiff would be taken for public use without just compensation.

VI.

That the District Court of the United States for the District of Nebraska, Lincoln Division, erred in not finding and decreeing that the ordinance set out in plaintiff's bill establishing the rate to be charged for gas in the City of Lincoln, would be a violation of Section 1 of Article XIV of Amendments to the Constitution of the United States, in that by its enforcement the plaintiff would be denied the equal protection of the laws.

VII.

That the District Court of the United States for the District of Nebraska, Lincoln Division, erred in not finding and decreeing that the ordinance set out in the complaint establishing the rate to be charged for gas in the City of Lincoln to be a violation of Section 1

of Article XIV of the Amendments to the Constitution of the United States in that by the enforcement of said ordinance the plaintiff would be denied the equal protection of the laws.

VII A.

That the District Court of the United States for the District of Nebraska, Lincoln Division, erred in not finding and decreeing the present value of plaintiff's property, used and useful in the manufacture and sale of gas in the City of Lincoln as of January 1, 1907, to be $784,682.00.

VII B.

That the District Court of the United States for the District of Nebraska, Lincoln Division, erred in not finding and determining the present value of the property of the plaintiff, used and useful in the manufacture and sale of gas in the City of Lincoln as of January 1, 1913, to be $1,090,913.00.

VIII.

That the District Court of the United States for the District of Nebraska, Lincoln Division, erred in excluding the cost of reopening and replacing pavements over gas mains and services on paved streets as a necessary part of the reproduction cost of the property.

IX.

That the District Court of the United States for the District of Nebraska, Lincoln Division, erred in refusing to find and determine that the plaintiff was entitled to a fair return from the actual investment, not improvidently made in the property, or to a fair return upon the reproduction cost new less depreciation, and the court was not warranted in adopting the reproduc-

tion cost, less depreciation, in those instances only where it would secure a lower valuation than the investment cost, and use the investment cost as a basis of present value in those instances only where it could secure a lower valuation than the reproduction cost new, less depreciation.

X.

That the District Court of the United States for the District of Nebraska, Lincoln Division, erred in overruling the Plaintiff's Exception Number 7 to the report of the special master as follows:

> "That the Master in said report stated and certified that the reproduction cost of Works Equipment in controversy is the sum of $198,868.00, whereas the Master ought to have found, stated and certified the reproduction cost of said Works Equipment to be not less than $253,298.00."

XI.

That the District Court of the United States for the District of Nebraska, Lincoln Division, erred in not finding and determining the reproduction cost of Works Equipment of the plaintiff, used and useful, in the manufacture and sale of gas in the City of Lincoln, as of January 1, 1913, to be the sum of $253,298.00.

XII.

That the District Court of the United States for the District of Nebraska, Lincoln Division, erred in overruling Plaintiff's Exception Number 8 to the Master's report as follows:

> "That the Master in said report stated and certified that the value of the Works Equipment in controversy is the sum of $179,310.00, whereas the Master ought to have found, stated and certified the value of said Works Equipment not less than $196,759.00."

XIII.

That the District Court of the United States for the District of Nebraska, Lincoln Division, erred in not finding and decreeing the present value of Works Equipment of plaintiff used and useful in the manufacture and sale of gas in the City of Lincoln, as of January 1, 1913, to be $196,759.00.

XIV.

That the District Court of the United States for the District of Nebraska, Lincoln Division, erred in overruling Plaintiff's Exception Number 62 as to the Master's report as follows:

> "That the Master in said report stated and certified that the net construction cost of the mains in controversy, laid in unpaved street, is the sum of $173,700, whereas the Master ought to have found, stated and certified the net construction cost of said mains to be not less than $179,814.00."

XV.

That the District Court of the United States for the District of Nebraska, Lincoln Division, erred in not finding and determining the net construction cost of mains laid in unpaved streets in the City of Lincoln to be as of January 1, 1913, $179,814.00.

XVI.

That the District Court of the United States for the District of Nebraska, Lincoln Division, erred in overruling Plaintiff's Exception Number 63 to the Master's report as follows:

> "That the Master in said report stated and certified that the net construction cost of the services is the sum of $76,116.00, whereas the Master ought to have found, stated and certified the value of said services is not less than $111,689.00."

XVII.

That the District Court of the United States for the District of Nebraska, Lincoln Division, erred in not finding and determining the value of services used and useful, and a part of the distribution system of the plaintiff in the City of Lincoln as of January 1, 1913, to be the sum of $111,689.00.

XVIII.

That the District Court of the United States for the District of Nebraska, Lincoln Division, erred in overruling Plaintiff's Exception Number 69 to the Master's report, as follows:

> "That the Master in said report stated and certified that he made no allowance for reproduction cost of paving over Mains and Services, where as the Master ought to have found, stated and certified and made an allowance for present value of Paving Over Mains and Services in the sum of not less than $142,291.00."

XIX.

That the District Court of the United States for the District of Nebraska, Lincoln Division, erred in not finding and determining the present value of plaintiff's property on the basis of the reproduction cost, new, less depreciation, and including therein as a part thereof, the additional cost incident to and necessarily incurred in the reopening of paved streets for the purpose of laying gas mains therein.

XX.

That the District Court of the United States for the District of Nebraska, Lincoln Division, erred in overruling Plaintiff's Exception Number 70 to the Master's report, as follows:

"That the Master in said report stated and certified that the Net Construction Cost of the Distribution System is the sum of $352,192.00, whereas the Master ought to have found, stated and certified the Net Construction Cost of the Distribution System is not less than $529,736.00."

XXI.

That the District Court of the United States for the District of Nebraska, Lincoln Division, erred in not finding and determining the net construction cost of the distribution system of the plaintiff as of January 1, 1913, to be $529,736.00.

XXII.

That the District Court of the United States for the District of Nebraska, Lincoln Division, erred in overruling Plaintiff's Exception Number 71 to the Master's report as follows:

"That the Master in said report stated and certified that the Reproduction Cost of the Distribution System is the sum of $396,216.00, whereas the Master ought to have found, stated and certified the Reproduction Cost of the Distribution System is not less than $614,493.00."

XXIII.

That the District Court of the United States for the District of Nebraska, Lincoln Division, erred in not finding and determining the reproduction cost of the distribution system to be as of January 1, 1913, the sum of $614,493.00.

XXIV.

That the District Court of the United States for the District of Nebraska, Lincoln Division, erred in overruling Plaintiff's Exception Number 72 to the Master's report as follows:

"That the Master in said report stated and certified that the Depreciated Value or Present Worth of the Distribution System is the sum of $351,-624.00, whereas the Master ought to have found, stated and certified that the Depreciated Value or Present Worth of the Distribution System is not less than $513,829.00."

XXV.

That the District Court of the United States for the District of Nebraska, Lincoln Division, erred in not finding and determining the present value of the distribution system of the plaintiff to be as of January 1, 1913, the sum of $513,829.00.

XXVI.

That the District Court of the United States for the District of Nebraska, Lincoln Division, erred in overruling Plaintiff's Exception Number 74 to the Master's report as follows:

"That the Master in said report stated and certified that the Going Value is the sum of $140,000.00, whereas the Master ought to have found, stated and certified the Going Value is not less than $225,-000.00."

XXVII.

That the District Court of the United States for the District of Nebraska, Lincoln Division, erred in not finding and determining the going value of the property of the plaintiff as of January 1, 1913, to be the sum of $225,000.00.

XXVIII.

That the District Court of the United States for the District of Nebraska, Lincoln Division, erred in overruling Plaintiff's Exception Number 76 to the Master's report as follows:

"That the Master in said report stated and certified that the company should not have expended for the promotion of new business in the year 1912 more than $12,000, whereas the Master ought to have found, stated and certified that the company, as shown by the record, did expend $19,692, and that said expenditure was fully justified and a proper charge to operating expenses."

XXIX.

That the District Court of the United States for the District of Nebraska, Lincoln Division, erred in overruling Plaintiff's Exception Number 77 to the Master's report, as follows:

"That the Master in said report stated and certified that an allowance of $12,000 ought to be made for depreciation in addition to what appears on the company's records, as operating expenses, whereas the Master ought to have found, stated and certified that such allowance ought to be made in a sum not less than $20,865.00."

XXX.

That the District Court of the United States for the District of Nebraska, Lincoln Division, erred in overruling Plaintiff's Exception Number 78 to the Master's report, as follows:

"That the Master in said report stated and certified that the salary of $3,000, paid to the president of the Board of Directors, should be dissolved and deducted from the operating expenses of the company, whereas the Master ought to have found, stated and certified that the amount of said salary charged to the operating expenses in controversy was $2,400, and that such salary was justified and reasonable, as shown by the record, and a proper charge to the operating expenses of the company."

XXXI.

That the District Court of the United States for the District of Nebraska, Lincoln Division, erred in overruling Plaintiff's Exception Number 79 to the Master's report, as follows:

> "That the Master in said report stated and certified that the salary of $600 paid to the company's legal representative in New York was not a necessary or prudent expenditure and ought not to be allowed, whereas the Master ought to have found, stated and certified that the amount of said salary charged to the operating expenses, in controversy, as shown by the record, was in fact $480; that it was a necessary and reasonable expenditure and a proper charge against the operating expenses of the company."

XXXII.

That the District Court of the United States for the District of Nebraska, Lincoln Division, erred in overruling Plaintiff's Exception Number 80 to the Master's report, as follows:

> "That the Master in said report stated and certified that in 1912, 73% of all plaintiff's customers were in the gas department and 27% in the electric department, whereas the Master ought to have found, stated and certified that as shown by the record, 1902 to 1912 inclusive, the average of all customers was 79% in the gas department and 21% in the electric department."

XXXIII.

That the District Court of the United States for the District of Nebraska, Lincoln Division, erred in overruling Plaintiff's Exception Number 81 to the Master's report, as follows:

> "That the Master in said report stated and certified that a division of common expenses for the

year 1912 on the basis of 73% and 27%, requires a deduction from the operating expenses chargeable to the gas department of $3,3000, whereas the Master ought to have found, stated and certified that such readjustment, if it ought to be made, would require a deduction of not more than $460.71."

XXXIV.

That the District Court of the United States for the District of Nebraska, Lincoln Division, erred in overruling Plaintiff's Exception Number 82 to the Master's report, as follows:

"That the Master in said report stated and certified that the legitimate operating expenses for the year 1912, taking into account $8,195.00 occupation tax, were $182,015.00, whereas the Master ought to have found, stated and certified that the legitimate operating expenses, including the assumed occupation tax, would in fact be $205,472.13, as shown by the record."

XXXV.

That the District Court of the United States for the District of Nebraska, Lincoln Division, erred in overruling Plaintiff's Exception 83 to the Master's report as follows:

"That the Master in said report stated and certified that the net income for 1912, with gas at $1.20 per M cubic feet, to be $91,161, whereas the Master ought to have found, stated and certified the net income, considering assumed occupation tax, to be $67,703.80, as shown by the record."

XXXVI.

That the District Court of the United States for the District of Nebraska, Lincoln Division, erred in overruling Plaintiff's Exception Number 84 to the Master's report, as follows:

"That the Master in said report stated and certified the expense for 1912, with gas at $1.00 per M cubic feet, and including occupation tax, would have been $180,639, and the net income $46,658, whereas the Master ought to have found, stated and certified that with gas at $1.00 per thousand cubic feet and including occupation tax as shown by the record, the operating expenses would have been $204,078.97, and the net income $23,637.56."

XXXVII.

That the District Court of the United States for the District of Nebraska, Lincoln Division, erred in not finding and determining that the net income for 1912 with gas at $1.00 M cubic feet in the City of Lincoln would have been $23,637.56.

XXXVIII.

That the District Court of the United States for the District of Nebraska, Lincoln Division, erred in overruling plaintiff's exception number 85 to the Master's report, as follows:

"That the Master in said report stated and certified that the net income with gas at $1.00 per M cubic feet would be 66.9% on $676,565, whereas the Master ought to have found, stated and certified that the net income for the year 1912 would be 3.5% on $676,565.00 and only 2.17% on the actual value of the company's property used or useful in the gas business in the City of Lincoln, January 1, 1913."

XXXIX.

That the District Court of the United States for the District of Nebraska, Lincoln Division, erred in not finding and determining and so decreeing that the net income for the year 1912 with gas at $1.00 per M. cubic feet in the City of Lincoln would have been 3.5% on the valuation assumed by the Special Master, and 2.17%

on the actual or present value of the plaintiff's property, used and useful in the gas business in the City of Lincoln, January 1, 1913.

XL.

That the District Court of the United States for the District of Nebraska, Lincoln Division, erred in overruling plaintiff's exception number 86 to the Master's report, as follows:

> "That the Master in said report stated and certified the total value of the company's property used or useful in the gas business in the City of Lincoln, January 1st, 1913, to be $676,565.00, whereas the Master ought to have found, stated and certified such value to be not less than $1,090,913.00 as shown by the record."

XLI.

That the District Court of the United States for the District of Nebraska, Lincoln Division, erred in not finding and determining that the total present value of the plaintiff's property used and useful in the gas business in the City of Lincoln, January 1st, 1913, to be the sum of $1,090,913.00.

XLII.

That the District Court of the United States for the District of Nebraska, Lincoln Division, erred in overruling plaintiff's exceptions number 88 to the Master's report, as follows:

> "That the Master in said report stated and certified that $10,000.00 is a sufficient allowance for depreciation for the year 1907, whereas the Master ought to have found, stated and certified that $14,955.00 was the necessary and reasonable allowance to charge for depreciation, as shown by the records."

XLIII.

That the District Court of the United States for the District of Nebraska, Lincoln Division, erred in not finding and determining that the necessary and reasonable allowance for depreciation for the year 1907 of the plaintiff's property was the sum of $14,955.00.

XLIV.

That the District Court of the United States for the District of Nebraska, Lincoln Division, erred in overruling plaintiff's exception number 90 to the Master's report, as follows:

> "That the Master in said report stated and certified that with gas at $1.00 for the year 1907 the net income would have been $22,349.00, whereas the Master ought to have found, stated and certified that under the conditions named the net income for the year 1907—have been $18,129.24."

XLV.

That the District Court of the United States for the District of Nebraska, Lincoln Division, erred in overruling plaintiff's exception number 91 to the Master, report, as follows:

> "That the Master in said report stated and certified that on his assumption of net income and on his erroneous assumption of value for the year 1907 the net income was 5.12% on the value of the plaintiff's investment in 1907. Whereas the Master ought to have found, stated and certified that the net income for the year 1907 was in fact as shown by the records only 2.31% on the value of the plaintiff's investment in 1907."

XLVI.

That the District Court of the United States for the District of Nebraska, Lincoln Division, erred in overruling plaintiff's exception number 95 to the Master's report, as follows:

"That the Master in said report stated and certified that the question of whether the franchise is perpetual or temporary is not material in this case and that the said franchise, however valuable it might be, could in no way affect the rate, which the public service corporations may charge its customers, whereas the Master ought to have found, stated and certified that the question did materially affect the case and the rate of return, as well as its value and the rates, which the corporation might charge, as shown by the record."

XLVII.

That the District Court of the United States for the District of Nebraska, Lincoln Division, erred in overruling plaintiff's exception number 96 to the Master's report, as follows:

"That the Master in said report stated and certified that the bonded debt of the company far exceeds the value of its assets, whereas the Master ought to have found, stated and certified that the value of the company's assets is much greater than its bonded indebtedness."

XLVIII.

That the District Court of the United States for the District of Nebraska, Lincoln Division, erred in overruling plaintiff's exception number 100 to the Master's report, as follows:

"That the Master in said report stated and certified that he cannot believe that a rate not lower than 6% upon their invested capital could be regarded as confiscatory, whereas the Master ought to have found, stated and certified that any rate under 8% was less than usually expected in business of this character in this locality, that any rate less than 8% is considered as being non-compensatory, and therefore to the extent that it is short of said 8% it is confiscatory."

XLVIX.

That the District Court of the United States for the District of Nebraska, Lincoln Division, erred in overruling plaintiff's exception number 101 to the Master's report, as follows:

> "That the Master in said report stated and certified that there is evidence in the record indicating that plaintiff regards investments in the stock of these corporations as especially desirable, whereas the Master ought to have found, stated and certified that the record shows that the plaintiff company, on the contrary, regards its investment in this locality, as being an extremely hazardous one under the existing conditions and that its stock is considered of little value in the market."

L.

That the District Court of the United States for the District of Nebraska, Lincoln Division, erred in overruling plaintiff's exception number 102 to the Master's report, as follows:

> "That the Master in said report stated and certified that all human experience has shown that increased consumption follows quickly a reduction in the price of commodities, whereas the Master ought to have found, stated and certified, as shown by the record, that because of strenuous competition of electric and other companies the demand for gas is gradually decreasing and it has only been possible for the company to make increases in the sales of gas by the expenditure of extraordinary efforts in the establishment of a new business department at large expense during the last twelve years, and that notwithstanding these extraordinary efforts, the company's output for the year 1913, shows an appreciable decrease, as compared for the year 1912."

LI.

That the District Court of the United States for the District of Nebraska, Lincoln Division, erred in overruling plaintiff's exception number 103 to the Master's report, as follows:

> "That the Master in said report stated and certified that with gas selling at $1.00 per M cubic feet, the plaintiff would have received since December 1, 1907, not less than 6% per annum upon the value of the property employed by it in serving the people of Lincoln, whereas the Master ought to have found, stated and certified that with gas selling at $1.00 per M. cubic feet and with the tax ordinance enforced, the company would have received on the value of its property employed in serving the people of Lincoln for the year 1907, only 2.31% for the year 1908, only 4.44%; for the year 1909, only 4.96%; for the year 1910, only 3.95%; for the year 1911, only 3.51%; for the year 1912, not more than 2.17%; and for the year 1913, not more than 1.04%."

LII.

That the District Court of the United States for the District of Nebraska, Lincoln Division, erred in overruling plaintiff's exceptions 104, 105, and 106, wherein plaintiff excepted to the failure of the Special Master to find the reproduction cost, the assumed life and age, and the amount and rate of depreciation on each of the 73 items of Works Equipment.

LIII.

That the District Court of the United States for the District of Nebraska, Lincoln Division, erred in overruling plaintiff's exceptions numbers 107, 108 and 109, and each thereof, wherein plaintiff excepted to the failure of the Special Master to find and certify the present value of each of the groups of items of property in the

Distribution System, and find and certify the age and assumed life for each of said groups of property, and find and certify the amount and rate of depreciation on each of said groups of property.

LIV.

That the District Court of the United States for the District of Nebraska, Lincoln Division, erred in overruling plaintiff's exception number 110 to the Special Master's report, wherein plaintiff excepted to the failure of the Special Master to find and certify the operating expenses, revenues and net incomes for the year 1913.

LV.

That the District Court of the United States for the District of Nebraska, Lincoln Division, erred in overruling plaintiff's exception number 111 to the Special Master's report, wherein plaintiff excepted to the Special Master's failure to find and certify the reproduction cost and present value of the property of the company for 1913.

LVI.

That the District Court of the United States for the District of Nebraska, Lincoln Division, erred in overruling plaintiff's exception number 112 to the Special Master's report, wherein plaintiff excepted to the failure of the Special Master to find and certify the reproduction cost and present value of the property of the company for the years 1908, 1909, 1910 and 1911.

LVII.

That the District Court of the United States for the District of Nebraska, Lincoln Division, erred in overruling plaintiff's exception number 113 to the Special Master's report, wherein plaintiff excepted to the falure of the Special Master to find and certify the rate and

amount of depreciation for each of the years 1908, 1909, 1910, 1911 and 1913.

LVIII.

That the District Court of the United States for the District of Nebraska, Lincoln Division, erred in overruling plaintiff's exception number 114 to the Special Master's report, as follow:

> "That the Master failed to find and certify the amount of organization and legal expenses and other costs preliminary to construction shown in the evidence in the amount of $33,000.00."

LIX.

That the District Court of the United States for the District of Nebraska, Lincoln Division, erred in overruling plaintiff's exception number 115 to the Special Master's report, as follows:

> "That the Master failed to find and certify the reproduction cost and present value of paving over mains and services."

LX.

That the District Court of the United States for the District of Nebraska, Lincoln Division, erred in overruling plaintiff's exception number 116 to the Special Master's report, as follows:

> "That the Master failed to find and certify a summary of the evidence on the values of the company's property, its operating expenses, net income and rate of return."

LXI.

That the District Court of the United States for the District of Nebraska, Lincoln Division, erred in overruling plaintiff's exception number 117 to the Special Master's report, as follows:

"That the Master failed to find and certify the incompetency of the testimony of A. D. Adams offered on behalf of the City on questions of value of the company's property and on operating expenses and results."

LXII.

That the District Court of the United States for the District of Nebraska, Lincoln Division, erred in overruling plaintiff's exception number 118 to the Special Master's report, as follows:

"That the Master failed to find and certify as to the franchise rights of the company involved in the issues necessary to be determined in valuing the company's property and in determining the operating expenses of the company and in determining the amount of depreciation, and failed to find and certify that the company had a perpetual franchise."

LXIII.

That the District Court of the United States for the District of Nebraska, Lincoln Division, erred in overruling plaintiff's exception number 119 to the Master's report as follows:

"That the Master in said report stated and certified that he had reached the conclusion that the ordinance in controversy has been at all times enforecable according to its terms and that the injunction heretofore granted restraining its enforcement should be vacated and complainant's bill dismissed, whereas the Master ought to have found, stated and certified that said ordinance was not enforceable and its enforcement would have denied to the company just compensation and would have resulted in confiscation of the property of the company if enforced in the years 1907, 1908, 1909, 1910, 1911, 1912 and 1913, and for each of said years, and that the injunction heretofore granted restraining the enforcement of said ordinance should be continued in force and made permanent."

31

LXIV.

That the District Court of the United States for the District of Nebraska, Lincoln Division, erred in overruling plaintiff's additional exception number 1 to the report of the Special Master, as follows:

> "That the Master failed to find and certify to the extent of the application of the revenue of the years 1907, '8, '9, '10, '11, '12 and '13, each separately, to reconstruction or replacements as distinguished from current repairs and operating expenses, and that the Master failed to find and certify the amount of past expenditures for reconstruction or replacement and past operating expenses, including current repairs for each of the years 1907, '8, '9, '10, '11, '12 and '13, and failed to find and certify how the gross receipts for the company for 1907-'13, inclusive, for each of the said years had been expended, and failed to find and certify the amount to be set aside for the year 1913 and thereafter for depreciation, and failed to find and certify the character and probable life of the property of the company and the methods adopted in the past to preserve the properties, and failed to find and certify on questions of value, operating expense, net returns, rate of return, depreciation and franchise rights of the company, being questions raised by the complainant, supported by proofs, all of which the Master was directed by the Supreme Court of the United States to fully report upon by order of the said Court in the case."

LXV.

That the District Court of the United States for the District of Nebraska, Lincoln Division, erred in overruling plaintiff's additional exception number 7 to the report of the Special Master, as follows:

> "The complainant excepts to the conclusions of the Master that deductions should be made from the value of the services in the distribution system.

on account of advancement made by consumers, and excepts to the failure of the Master to find and certify the reproduction cost and present value of the paving over mains and services for each of the years 1907 to 1913, inclusive."

LXVI.

That the District Court of the United States for the District of Nebraska, Lincoln Division, erred in overruling plaintiff's additional exception number 5 to the report of the Special Master, as follows:

"That the Master failed to find and certify as to the competency, materiality and relevancy of the testimony offered as to the Massachusetts and other companies offered on behalf of the complainant and failed to indicate whether such testimony bearing on the results of such companies was taken into account and given due consideration on the part of the Master in reaching the conclusions submitted; and failed to find and certify whether the increased cost and the amount thereof in the manufacture of gas by complainant, on account of the pressure ordinance and quality ordinance was taken into account and given consideration on the part of the Master in reaching conclusions submitted."

LXVII.

That the District Court of the United States for the District of Nebraska, Lincoln Division, erred in overruling plaintiff's additional exception number 6 to the report of the Special Master as follows:

"Complainant excepts to the conclusions submitted without a summary of the evidence being submitted therewith, and excepts to the final conclusions submitted by the Master, in view of the finding of the Master to the effect that (summarization of this evidence is quite impossible and would so far as I can see aid neither court nor counsel in testing the correctness of the conclusions I have reached) and as a result thereof the complainant

is denied the benefit of the testimony offered and means of testing the correctness of the Master's conclusions, by the evidence considered by the Master."

LXVIII.

That the District Court of the United States for the District of Nebraska, Lincoln Division, erred in overruling plaintiff's application to recommit the case to the Special Master for additional findings.

LXIX.

That the District Court of the United States for the District of Nebraska, Lincoln Division, erred in not decreeing that the ordinance set out in the complaint imposing an occupation tax on gas companies in the city of Lincoln to be a violation of Section 1 of Article XIV of Amendments to the Constitution of the United States in that by its enforcement the plaintiff would be denied the equal protection of the laws.

LXX.

That the District Court of the United States for the District of Nebraska, Lincoln Division, erred in not permanently enjoining the enforcement of the ordinance of the City of Lincoln, imposing an occupation tax on gas companies in the City of Lincoln.

LXXI.

That the District Court of the United States for the District of Nebraska, Lincoln Division, erred in overruling exception No. 94 to the Master's report as follows:

"That the Master in said report stated and certified that the occupation tax ordinance is valid, whereas the Master ought to have stated, found and certified that said ordinance, if enforced, would operate to confiscate the plaintiff's property, as shown by the records and should therefore and for other reasons be declared invalid and discriminatory."

## I.

**The repeated and persistent attacks of the City on the company, reducing and depleting its revenues, running through a course of years, is to be considered in determining when, if ever, the company will be able to recoup losses already sustained in its revenues.**

The evidence shows that in 1904 the Company became the scapegoat of political strife in Lincoln, and the city authorities instituted a campaign of aggression against the Company, which ultimately compelled the Company to resort to the Courts in order to preserve its properties and franchises.

As a result of the agitation and threatened action on the part of the City, in 1904 the Company reduced its gas rate to $1.20 per M cubic feet (Transcript, p. 187). The condition of the company at that time is shown by the testimony of its manager, Mr. Homer Honeywell, who testified as follows (Transcript, p. 149):

> "We were behind about $40,000 on our bills and taxes at that time (1904) and for some time prior we had been unable to maintain the plant and meet the interest on the bonded indebtedness and that was the emergency that required the contribution of $100,000 from stockholders. We were in dire distress for money and we couldn't borrow it."

In order to recover the losses sustained in its revenues by that 1904 reduction, the Company established a new-business department and made a thorough and energetic canvass of the city for the purpose of holding present and getting additional business, and from that time on down to the time the evidence closed in this case before the Master, a new-business department was maintained at a great expense to the Company, for the purpose of holding and pushing the Company's business

and extending it as rapidly and as far as possible. Mr. Honeywell, the manager of the Company, testified in 1907 as follows (Transcript, p. 154):

> "In 1904 we started out with a new-business department with six solicitors and with a man at the head and a clerk. They made a house to house canvass to ascertain what the consumers had on the premises, what they used, why they didn't use something else, and trying to get in additional equipment. They went to every house in the town and kept a card record of it. The town was divided into territory or districts and each man knew how many people used only a range or light or both. We maintained a school and educated our solicitors and got reports from them daily and there was considerable expense involved in that."

That this campaign for new business was as successful as could have been expected, is shown by Exhibit 425, Subdivision S (Transcript, p. 1388), which indicates that the Lincoln Gas Company had 78.1 consumers per mile of main in 1912, and sold 5,095 M cubic feet of gas per capita; and in comparison with twenty cities in the State of Massachusetts this record of gas sales shows the highest number, with the exception of one, of consumers per mile of main (Transcript, p. 1388). The extent to which the work of the new-business department had been pushed in comparison with other cities, showed that there was no further development possible to be expected, beyond the increase which would come from the natural growth of the city; and the natural growth of the City of Lincoln, as shown by the Federal census (Transcript, p. 1617) was only an increase from 40,000 in 1900 to 44,000 in 1910; in other words, 4,000 in ten years. This work of the new-business department was a determined effort on the part of the Company to recoup its losses resulting from the reduction of rate in 1904.

Before the Company had recovered from these losses due to the 1904 reduction, the City, in April, 1906, some months prior to the passage of the Rate Ordinance, passed what was known as a Quality and Pressure Ordinance, which called for a high quality of gas, both in heating and lighting power, to wit, 18 candle power and 625 B. T. U.'s (Transcript, pp. 1746, 128). The record shows that this quality requirement is an exceptionally high standard, both for light and heat (Transcript, p. 128). The Wisconsin Commission has said (In Re Standard for Gas and Electric Service, 2 W. R. C. C., 648), "to require companies to maintain a double standard which shall insure both the high heating value and a high candle-power, would surround them with such restrictions that economy in manufacturing might not be attained." The cost of manufacturing gas in 1906 discloses the fact that the cost of gas in the holder was materially increased, to wit, approximately 10c. per M cubic feet of gas (Exhibit 425, Subdivision L; Transcript, p. 1382).

In November, 1906, the City passed the Rate Ordinance in controversy, reducing the price of gas 20c. per M cubic feet, to be effective December 1, 1906. The evidence shows that prior to the passage of this Rate Ordinance, the company made a determined effort to have the City Council investigate its books, records and the details of its business, in order to demonstrate the cost of manufacture and distribution of gas in the City of Lincoln. Mr. Honeywell, on this point, testified (Transcript, p. 136):

> "Previous to the final passage and taking effect of the ordinance in controversy in this suit, the Lincoln Gas & Electric Light Company offered to exhibit its books of account to a committee appointed by the City Council, in order to prove to them that we could not supply dollar gas. That was done in

open Council meeting in my presence. We also asked them to suspend the rate until we could complete our investigation. They refused to do that, and they acted on it abruptly. I do not remember that any motion was made in the City Council. The suggestion of the company, as I recall, was received by silence. The City did not, before the passage of this ordinance, examine into, or have examined into, the details of the company's business to ascertain what was the cost of manufacture and distribution of gas in the City of Lincoln, and they did not go over the properties of the company or its books to ascertain what the cost of manufacture and distribution of gas was, and they did not ascertain the capital necessarily employed in the conduct of the business. I was present, I think, at all the meetings at which the ordinance in controversy here was introduced, read and considered. I was a pretty regular attendant those days, and I heard the expressions made by the Councilmen on the floor of the council chamber in respect to the gas company's inability to reduce the rate to a dollar, and I heard the expressions of the members of the Council of the effect of the adoption of such a rate on the solvency of the company. Mr. John S. Bishop said the only way that they would ever get the water out of the stock or bonds of the company was to put it into the hands of a Receiver, and he in his humble way would do all he could to bring that about."

On December 10, 1906, the City passed an ordinance levying an occupation tax of two and one-half per cent. on the gross receipts of the gas company (Transcript, p. 1751), which would result in a further reduction of the company's revenues, and at the dollar rate would, in fact, require the company to furnish gas for 97½c. per M cubic feet.

During the progress of all these acts of aggression, the City had taken the position that the Company's franchise, which the Company claimed was a perpetual

one, had expired, and that the Company had no further right or license to use the streets of the City of Lincoln for the purpose of distributing gas, and that its pipes and equipment were there solely at the sufferance of the City, and were subject to ejectment at any time by the City. A claim to a perpetual franchise was set forth in the Company's petition in this case (Transcript, p. 3), but it is expressly denied in the City's answer, which states that the Company's franchise was terminated, that the right to use the streets of the City is by sufferance only, and subject at any time to cancellation by the City (Transcript, pp. 21, 22). This answer of the City was filed May 13, 1907.

Furthermore, the City of Lincoln actually instituted a suit, in April, 1908, in the State Courts of Nebraska, asking for a writ of ouster ejecting the Company from the streets of the City (Exhibit 56; Transcript, p. 1758), which suit is now pending, and is being pressed for trial by the City (Transcript, p. 793). As to the City's attitude in this franchise suit, Mr. Morning, who was an influential member of the Municipal Ownership League, and special counsel for the City in this case, testified with respect to the franchise suit as follows (Transcript, pp. 824-5):

> "I do not think the suit to forfeit the franchise right is being prosecuted to compel the company to submit to a reduction of its rates. It was an effort to clear the books and *put the City in a position to negotiate with the company.*"

In addition to the foregoing, a league was formed in the City of Lincoln, called the "Municipal Ownership League," which was openly advocating municipal ownership of public utilities, including gas works, and was in this connection advocating the building of a gas plant by the City, to be operated in competition with the Company (Transcript, p. 825).

The City had actually established a municipal electric plant, which was competing with the Company in the lighting business (Transcript, pp. 825, 788), and this competition was further aggravated by the fact that the Lincoln Traction Company was also generating and selling electricity in competition with the company in the lighting business (Transcript, p. 788).

This Municipal Ownership League caused a bill to be presented to the Legislature of the State of Nebraska, authorizing the City of Lincoln to construct, maintain and operate a gas plant. An amendment to this bill, which was introduced to the effect that before the City should construct a new plant it would buy any existing plant by condemnation, at a fair valuation, was decisively defeated through the efforts of the Municipal Ownership League (Transcript, p. 824). The real meaning of this legislation is clear, in spite of Mr. Morning's denial that he "did not undertake to get this bill through for the purpose of compelling the Company to make a settlement with the City regardless of the justice of its terms" (Transcript, p. 824).

On March 16, 1908, the City passed an Occupation Tax Ordinance, assessing and levying an occupation tax of two per cent. on the gross receipts resulting from the sale of electricity for light, heat or power purposes in the City of Lincoln (Transcript, p. 1773). In this connection, the testimony of Mr. Frank W. Frueauff, to the effect that the electric department of the company was only earning one per cent. at that time, shows the drastic character of this Tax Ordinance (Transcript, p. 788).

On December 13, 1909, the City passed another ordinance levying an occupation tax of three per cent. on the gross receipts resulting from the sale of gas or electricity for light, heat or power purposes in the City of

Lincoln (Transcript, p. 1767), which repealed the two previous Tax Ordinances, but increased the burdens of taxation.

While all these things were going on, the company's general taxes were increased from $2,112 in 1905, to $6,690 in 1906, and to $15,260 in 1912 (Exhibit 425, Subdivision P; Transcript, p. 1386). The valuation of its properties was increased from $663,400 in 1906 to $1,184,250 in 1910 (Transcript, pp. 1861 and 1889).

We submit that it is perfectly evident from this series of acts of hostility and oppression on behalf of the City, that the City was engaged in a deliberate attempt to push the Lincoln Gas Company to the wall, for the purpose of compelling it to surrender its franchise and properties, in the interest of a municipal plant.

In this conection, we beg to call the attention of this Court to the pertinent language used by Mr. Justice Moody, in the case of Knoxville Water Company, 212 U. S., 1, where he said:

> "Our social system rests largely upon the sanctity of private property, and that state or community which seeks to invade it will soon discover the error in the disaster which follows. A slight gain to the consumer which he would obtain from a reduction in the rates charged by a public service corporation is as nothing compared with his share in the ruin which would be brought about by denying the private property its just reward, thus in settling values and destroying confidence."

Some of the conditions described above existed at the time of the former hearing of the appeal in this case, which called forth the remark from Mr. Justice Holmes that "the City was putting the screws on the Company."

We have set forth all these facts and conditions at

the outset of this brief, in order that the Court may understand the atmosphere surrounding the Company's operation and business in the City of Lincoln, and also because we submit that they bear directly upon the attitude of the City in the issues in this case.

## II.

### Rate of Return.

In respect of the rate of return, which the Master decided was a reasonable return on an investment of this class in the City of Lincoln, the Master said:

> "A considerable number of witnesses testified with respect to the return upon capital invested in banking, merchandising and other businesses in the City of Lincoln, and from their testimony, I find that 8 per cent. is the lowest rate sought and generally obtained in such businesses. There is, however, in all these lines free competition and hazards from which a utility corporation is exempt. Banks fail; merchants go to the wall, but if any honestly capitalized and conducted gas, water or electric company having a monopoly of the business in the community which it serves has become bankrupt, the fact has escaped my notice. The profits of such corporation may not be large, but they are virtually guaranteed profits, and I cannot believe that a rate not lower than 6 per cent. upon their invested capital could be regarded as confiscatory. There is evidence in the record indicating that plaintiff regards investments in the stock of these corporations as especially desirable." (Transcript, pp. 54 and 55.)

What is a fair rate of return upon a certain class of investment in a given locality is to be determined by all of the circumstances surrounding each particular case. It is obvious that such should be the rule, and the principle was clearly stated by Mr. Justice Peckham

in Willcox *v.* Consolidated Gas Co., 212 U. S., 19, where he said, in part:

> "There is no particular rate of compensation which must in all cases and in all parts of the country be regarded as sufficient for capital invested in business enterprises. Such compensation must depend greatly upon circumstances and localities; among other things, the amount of risk in the business is a most important factor, as well as the locality where the business is conducted and the rate expected and usually realized there upon investments of a somewhat similar nature with regard to the risk attending them. There may be other matters which in some cases might also be properly taken into account in determining the rate which an investor might properly expect or hope to receive and which he would be entitled to without legislative interference. The less risk, the less right to any unusual returns upon the investments. One who invests his money in a business of a somewhat hazardous character is very properly held to have the right to a larger return without legislative interference, than can be obtained from an investment in Government bonds or other perfectly safe security" * * * (48-49).

Referring to an investment in a gas company in New York City, he said:

> "In an investment in a gas company, such as complainant's, the risk is reduced almost to a minimum. It is a corporation, which in fact, as the Court below remarks, monopolizes the gas service of the largest city in America, and is secure against competition under the circumstances in which it is placed, because it is a proposition almost unthinkable that the City of New York would, for purposes of making competition, permit the streets of the City to be again torn up in order to allow the mains of another company to be laid all through them to supply gas which the present company can adequately supply. * * * An interest in

such a business is as near a safe and secure investment as can be imagined with regard to any private manufacturing business, although it is recognized at the same time that there is a possible element of risk, even in such a business." (49)

*In Re* Queens Borough Gas & Electric Company, 2 P. S. C., 1st D., N. Y., decided June 23, 1911, it was said:

> "Various standards have been suggested for determining the fair rate of return. The one which in our opinion is properly applicable to this case is that the rate should be such that investors would be induced to provide the funds with which to construct and extend a gas and an electric plant within the area in question. If the state were to fix a rate below this standard, capital could not be secured. If investments were made before the state acted, the original capital might be forced to remain, but additional capital could not be secured unless necessary to protect the first outlay."

In conformity with this doctrine, it will be necessary, in order to determine the proper rate of return on the Company's investment, to look to the locality in which the company is operating, and the risks which there occur.

From an examination of these facts, we submit that the finding of the Master that a return of six per cent. would not be confiscatory, is absolutely without justification.

The City of Lincoln, the capital of the State of Nebraska, is strictly a residential city, with no field for industrial gas sales (Transcript, pp. 469-70, 1357). The market for gas in Lincoln is, therefore, limited to sales for domestic lighting and cooking purposes (Transcript, p. 1375). Furthermore, within the past 11 years electricity for lighting purposes has begun to replace gas (Transcript, p. 668, 469), and, in fact, it ap-

pears from the record (Transcript, p. 667) that many of the newer houses being built in Lincoln are not even being piped for gas lighting purposes. This fact narrows even more closely the field for the sale of gas to cooking ranges. As it was very aptly expressed in one of the prior arguments of this case, gas in Lincoln "was being driven from the parlor to the kitchen."

The population of the City of Lincoln, according to the 1900 Federal Census, was approximately 40,000 (Transcript, p. 1617), and in 1910, according to the Federal Census, it was approximately 44,000, an increase of but 4,000 over a period of ten years.

As far as this Company's operations in Lincoln are concerned, we have already shown in Point I hereof how the Company was actually beset on all sides by influences which tended to hamper its business, reduce its earnings, and increase the hazard of its investment.

It could hardly be said, in view of all the above circumstances, that the position of the Company's investment, even in the City of Lincoln, was a favorable one.

The Company in this case introduced the testimony of ten witnesses, in respect of the rate of return which investments in general, and this investment in particular, should command in the City of Lincoln. Against this proof the city introduced not a single witness. All the Company's witnesses were men of high standing and prominence in the business life of the City of Lincoln, and most of them were familiar with investments of this class. Not one of them would say that a return which was lower than eight per cent. was a fair return, and yet, in view of all this testimony, which was quite unchallenged, the Master determined that a six per cent. rate of return was fair and not confiscatory.

We deem this subject of sufficient importance to set

forth precisely what the various witnesses said in respect of this matter.

Mr. Frank W. Frueauff, a member of the operating firm of Henry L. Doherty & Company of New York, the President of complainant, who has spent his active life in the operation of gas utilities, testified that such utility at Lincoln could not possibly be financed on a more favorable basis under normal conditions than 8 per cent. return on invested capital, and in order to float 8 per cent. securities it was necessary that the company show a net return on invested capital of at least 10 per cent. per annum, in order to maintain the stability of the investments (Transcript, pp. 169, 781-2).

Mr. E. B. Sawyer was a witness for the Company and testified that he was President of the Cushman Motor Works, located at Lincoln, and which manufactures gasoline engines which are sold practically all over the world (Transcript, 580). That the minimum rates required to attract investments in manufacturing lines and enterprises involving risks incident to business in Lincoln is from 15 to 20 per cent. (Transcript, p. 580); testified that he was a member of the City Council in charge of the gas ordinances in 1906, and that he was willing to recede from the dollar rate, but the council was influenced by legal advice that there was an opportunity to maintain the rate upon a contest; "there was a general tendency with the committee to accept some compromise sliding scale agreement, and our legal advice at that time was that the opportunity was open for fighting the case from a legal standpoint" (Transcript, p. 580).

Mr. J. E. Miller, the head of Miller & Paine Company, engaged in the general merchandise business, formerly a director in the City National Bank and now a director in the First National Bank, also a director in the Lincoln Traction Company and interested in the Lincoln Tele-

phone Company, who has resided 34 years in Lincoln, testified that an 8 per cent. average would be a necessary return on investments in gas utilities in Lincoln under normal conditions to attract capital investments and testified that under present conditions of the disputed franchise rights from a refusal to extend franchise and pendency of suit to eject the Company from the streets, there would be presented simply a gambler's proposition which would require a rate of return accordingly (Transcript, p. 585). Mr. Miller testified:

> "I large amount of capital would not be invested under those conditions, under any terms. People having money to invest would not invest. Small amounts might be secured on a speculative proposition. Gamblers might be interested, but investors would not put any money into it at all" (Transcript, p. 585).

Mr. Frank H. Woods, President of the Lincoln Telephone & Telegraph Company with assets of $6,000,000, part owner of a Silo Manufacturing Company located at Lincoln, with a capital of one-half million dollars, and a stockholder in many industrial corporations, as well as a director of the First National Bank of Lincoln and a stockholder in other Lincoln banks, testified that a fair rate of return for investments in gas utilities in Lincoln is from 8 to 10 per cent. under normal conditions and that existing difficulties would probably prevent obtaining funds for that utility upon any basis (Transcript, p. 579). Mr. Woods testified:

> "I think the hazard would be prohibitive. I do not think you could get any money for investments under those circumstances, except from people who were already in and who would have to put in more to save their investments" (Transcript, p. 579).

Mr. P. L. Hall, President of the Central National Bank

of Lincoln, and prior thereto cashier of the Columbia National Bank, and for 29 years engaged in the banking business in Lincoln, testified that bank stock ought to be earning at least 8 per cent. (Transcript, p. 581) and that general manufacturing and commercial enterprises should pay 8 per cent. in order to attract capital investment, and testified that he could not state a rate necessary to attract capital as an investment in the gas property with its franchise rights involved in litigation by the City; that it would be a speculation and not an investment (Transcript, pp. 581-2).

Mr. J. D. Lau, wholesale grocer in Lincoln and general manager of the H. P. Lau Company, one of the large distributing houses, supplying western teritory, testified that jobbers in that line would expect from 10 to 12 per cent. on their money in Lincoln (Transcript, p. 581.

Mr. Silas H. Burnham, the well-known president of the First National Bank of Lincoln, whose average deposits are four million dollars and who has a banking experience in Lincoln extending over twenty years, testified that for an investment in property such as the Lincoln Gas Company, under normal conditions, and during the period following 1906, to the present time he would require a rate of return of from 10 to 15 per cent. in order to induce him to invest, and would prefer farm mortgages at 6 or 7 per cent. to gas investments at the high rate named. In the present attitude of the City toward the company, he knew of no rate that would be adequate to induce investments in the Lincoln Gas property (Transcript, pp. 587-8).

Mr. C. B. Towle, for ten years an active officer in the Curtis, Towle & Paine Company at Lincoln, doing a business of about a million dollars a year in the manufacture and sale of sash and doors and other millwork, testified that the fair return on investments involving

risk of the business in the City of Lincoln is in the neighborhood of 15 per cent. and that an actual rate of return of from 10 to 12 per cent. in an old established business was necessary to attract capital to enterprises like those in which he was engaged (Transcript, p. 580).

Mr. C. H. Beaumont, cashier of the Nebraska State Bank of Lincoln, and an officer in other banks in the State, and who was for six years State Bank Examiner, testified that it required a rate of return of from 10 to 15 per cent. to attract capital fo investments in manufacturing or other business enterprises in Lincoln and that for the gas company under normal conditions it would be about 10 per cent. (Transcript, p. 584). Mr. Beaumont testified with respect to the matter of getting capital under present conditions:

> "The fact that the City is prosecuting a suit to put the gas company out of the streets, and there is a question as to its franchise, and that the Legislature has authorized the City to establish and operate a gas plant without any provision for taking over the property of the company, I think would make it hard to interest capital at all in this enterprise. It would make it practically prohibitive" (Transcript, p. 584).

Mr. M. W. Folsom, president of the Nebraska State Bank of Lincoln and secretary of Nebraska Central Building & Loan Association of Lincoln, testified that it would be necessary to show a rate of return of at least 8 per cent. for capital for gas utilities in Lincoln under normal conditions (Transcript, p. 576), and testified that under present conditions money could not be attracted for the enterprise at any rate of interest. Mr. Folsom testified:

> "Where the question of the right of the company to be on the streets and the right to use the property is involved in a law-suit brought by the City and where the people have voted to refuse to quiet the

> right of the company in the streets, and where the Legislature has authorized the City to engage in the manufacture and selling of gas—under those conditions you could not attract capital at all. Anyone looking for an investment would look elsewhere. You might be able to find those who like to speculate and they might pay something, but an investor looking for an investment would not be attracted" (Transcript, p. 576).

Homer Honeywell, the manager of the Company, in speaking of the market value of the Company's securities, which is an exact estimate of the attitude of investors toward the business and affairs of the Lincoln Company, said (Transcript, p. 133):

> "There has been no time in the past three years when the 7% notes of the company would command par at the market, and there has been no time during my administration when the 5% bonds of the company would command par, or any figure within 20% of par. That is the reason that we issued the notes at the present time. We thought the notes would go better than the bonds. Nobody wanted the bonds. We are offering a collateral, par value of $200,000, in order to get a $100,000 loan, and our 7% notes with 2% commission are going begging at that offer."

In addition to all this testimony, it appears from the record (Transcript, p. 1711) that the Nebraska State Railway Commission, on application of the Company, in July, 1911, issued an order authorizing the Company to issue and sell $500,000 principal amount of its three-year six per cent. notes, at a price equal to 96% of the principal thereof, plus accrued interest. The rate of interest to the investor upon said notes was, therefore, equivalent to 7.6%. The statutes of Nebraska vest the Railway Commission with power to pass upon applications of public utility companies to issue stocks, bonds and obligations running for a period longer than one

year, and in the exercise of that power the Commission is vested with authority and is required to examine into the affairs of the company to fix and determine the extent of the securities prescribed, the rate of interest, and the conditions and terms under which such securities may be issued. The public utility companies are required to proceed in these matters under the direction of the Commission. The orders of the Commission are binding upon the public utility company, and are alike binding upon the Courts. In this case the minimum rate of return on the $500,000 principal amount of the Company's notes has been fixed and determined by the Commission, acting pursuant to the power vested in it by law, and the rate of return so fixed on said notes was 7.6%.

The legal rate of interest in the State of Nebraska is seven per cent.

In view of this overwhelming weight of evidence, opposed to which was not one word of testimony, we confess we are at a loss to understand the justification for the Master's finding that a six per cent. rate of return was fair and not confiscatory, nor the reason for his finding being confirmed by the court below. This Company, involved as it was in a bitter political struggle in the City of Lincoln, beset on all sides by competition, and threatened with expulsion from the streets of the City of Lincoln, is put by the Master and the court below upon the same basis as the Consolidated Gas Company, which does business under a perpetual franchise in New York City, about which Mr. Justice Peckham said:

> "It is a corporation, which in fact, as the court below remarks, monopolizes the gas service of the largest city in America, and is secure against competition under the circumstances in which it is placed, because it is a proposition almost unthink-

able that the City of New York would, for purposes of making competition, permit the streets of the City to be again torn up in order to allow the mains of another company to be laid all through them to supply gas which the present company can adequately supply" (p. 49).

Without discussing the authorities on rate of return at any length, we think it advisable to briefly state some of the rates which were approved in cases involving public utilities in various parts of the country:

Mayhew *v.* Kings Co. Lighting Co., 2 P. S. C., First D. N. Y., decided October 30, 1911....7½%
Des Moines Water Co. *v.* City of Des Moines, 192 Fed., 193.....8 %
City of Havlock *v.* The Lincoln Traction Co., Nebraska State Ry. Comm. Annual Report, 1911, p. 91.....8 %
Public Service Gas Co. *v.* Board of Public Utility Commissioners, 84 N. J. L., 463.....8 %
Central of Georgia Ry. Co. v. R. R. Comm., 161 Fed., 925 .....8 %
*In re* application Public Service Gas Co., Vol. 2, B. T. U. C. (N. J.), Dec. 30, 1913.....8 %
State Journal Printing Co. *v.* Madison Gas & Electric Co., 4 U. R. C. R., 501....7½%—8 %
Application of Lincoln Telephone & Telegraph Co. for permission to establish temporary rates of service, Nebraska State Ry. Comm. Annual Report, 1913.....8 %

There is one of the Master's remarks in his findings on rate of return which we wish to comment on. He says (Transcript, pp. 54-5):

> "There is. however, in all these lines free competition and hazard from which a utility corporation is exempt. Banks fail, merchants go to the wall, but if any honestly capitalized and conducted gas, water or electric company having a monopoly of the business in the community which it serves, has become bankrupt, *the fact has escaped my notice.*"

In view of this remark, we beg to call attention to the experience of the old Lincoln Street Railway Company, whose first mortgage to New York Security & Trust Company, securing $600,000 of that Company's bonds, was foreclosed in 1903. In connection with that foreclosure, the case of City of Lincoln against Lincoln Street Railway Company, 67 Neb., 469, came before the Supreme Court of the State of Nebraska, in the January term, 1903, while the Master in this case was sitting upon the Supreme Court bench as Chief Justice of said Court. In that case the history of the Street Railway Company in Lincoln was reviewed. The plaintiff in that case (the City of Lincoln) raised the contention "that the mortgage (which had been foreclosed in this Federal Court) was given to secure a fictitious indebtedness." But the Supreme Court of Nebraska held, page 483:

> "It appears, however, that the money borrowed upon the mortgage in question was used to pay for some of the constituent properties purchased by the defendant, which became parts of the property

of the consolidated company; that some of it was used for the construction and extension of the several lines of street railway so purchased, and a large part of it was used to electrically equip the whole system; that the amount of money expended for these purposes was about $900,000, so that no fictitious indebtedness was created by the mortgage in question; and it appears that the Company, in effect, received property, money, or labor for the amount, and to the extent of a much greater sum than the total amount of bonds secured by the mortgage."

And, yet, in the face of this decision rendered by the Court of which the Master himself was Chief Justice, the Master states that a utility company is exempt from hazards, and the fact that any honestly capitalized gas, water or electric company has become bankrupt, has escaped his notice.

## III.

**The City of Lincoln, after the passage of the gas rate ordinance in question and the institution of this suit to enjoin its enforcement by the Company, caused to be instituted an action in the State Court to eject the Company from the streets and prevent it from further continuing in business in Lincoln, claiming that the Company's franchise, under which it manufactured and distributed gas in the City, had expired, and that its right to continue in the business had ceased and terminated.**

The suit above referred to was instituted on April 11, 1908 (Transcript, p. 1758), and the city, as shown by the record, is insisting upon the trial of the case immediately upon the conclusion of the hearing in

this case. The record shows the following stipulation, with respect to the ejectment suit of the city, entered into during the course of the taking of the testimony before the Master:

> "It is stipulated by and between the parties that the City of Lincoln through the City Attorney and his associates has secured an order from the District Court of Lancaster County, Nebraska, setting the case of the State of Nebraska *ex rel.*, Frank M. Tyrrel *v.* The Lincoln Gas & Electric Light Company for trial over the objection of the company immediately after the conclusion of the taking of the evidence before the Master in this hearing and the city is demanding an immediate trial and judgment in that case according to the prayer of its petition" (Transcript, p. 793).

The pendency and prosecution of this suit by the city to eject the Company from the streets and public grounds, is a serious menace, and puts in jeopardy all of the Company's business and property. If the city should be successful, the Company would not be permitted, instead of required, to furnish gas service in the city.

In the petition the Company pleads the Ordinance of 1872, granting its franchise rights, and alleges that the city is now challenging the Company's right to manufacture and distribute gas in the city, claiming that the franchise had expired in 1893. The Company set out its construction of the franchise Ordinance of 1872, and asked in this case that the case that the Court adjudicate and determine whether the franchise had or had not expired. The City answering contends that the Company's franchise rights expired in 1893, and that the Company is now operating its plant in Lincoln at the sufferance only of the city. The answer was filed on May 13, 1907. The suit to eject the Company from

the streets and public grounds, as already indicated, was started on April 11, 1908.

This action on the part of the city is inconsistent with the requirements of the Gas Rate Ordinance in controversy. The position of the City, on the one hand, is that the Company shall be required to furnish gas in the City of Lincoln at a stated rate fixed by the city; and, on the other hand, and at the same time, that the company has no right to furnish gas in the City of Lincoln at all. It is self-evident that if the city forbids the Company to render the service, that it cannot at the same time require the service to be rendered at a given rate. We feel that this situation, with the necessary conclusions which follow from it, call for a reversal of the case sustaining the Ordinance fixing the rate to be charged for the service. The two positions assumed by the city in this respect are so inconsistent that they cannot exist at the same time, and the city, having instituted the ouster suit subsequen to the attempted rate regulation, will be deemed to have elected to pursue that remedy against the Company and to have abandoned its contention that the company should be required to render the service at the rate fixed by the Ordinance in question. If we are correct in this conclusion, it will not be necessary to go further into the case, but should the Court feel that the position of city in this respect is not so inconsistent as to preclude it from pursuing both remedies against the Company at the same time, then we submit that the Court in considering the adequacy of the rate, must take into account the fact that the city is attempting to terminate the rights of the company to use its property further for the manufacture and sale of gas. That fact must necessarily be considered as one of the conditions affecting a fair rate of return, from which there can be no escape.

The evidence shows that subsequent to the passage of the Rate Ordinance in question, the company invested in extensions and betterments to its properties more than $210,000. The rate of return upon the value of that investment must be sufficient to preserve intact the investment during the time it may be employed in the public service. In all rate cases where this Court has commented upon the adequacy of the rate to yield a fair rate of return, the Court has stated that all the facts and circumstances tending to show what would be an adequate rate under the conditions and in the community where the property was employed, must be considered; in other words, the Court has considered all those facts and circumstances which would influence an investor in considering a proposed investment in the company. The city, by its act, says to the investor: "You are not entitled to earn anything upon this property. The company has no right to use this property in the gas business in the City of Lincoln, and the city proposes to secure the judgment of the Court ousting this company from the streets." In that situation in a controversy with the city as to the adequacy of the rate, what would be a fair rate of return upon the investment? This Court has settled the rule that the rate must be adequate, and that if it is less than adequate it is confiscatory, and to be adequate it must be sufficient to preserve the value of the investment and give to the investor a fair rate of interest on that value, and provide a sufficient fund in addition to take care of all depreciation, resulting from whatever cause, to the property while employed in public service. If the depreciation in the property is caused by an act of the City, it must, nevertheless, be compensated for in the rates to be charged. All elements going to depreciate the property are alike considered in determining the total depreciation, and it is the total deprecia-

tion, plus a fair rate of return upon the value of the investment that is to be preserved to the investor.

The evidence submitted by the Company in this case on the question of what would be a fair rate of return under these conditions, was not controverted by the City, and stands unchallenged to the effect that practically there is no rate sufficient under existing conditions to induce the further investment of capital in the Company's properties. The principal witness for the City testified (Transcript, p. 847):

> "To my mind, the value of an engineering structure, like that of most physical things, is made up of two main elements, its utility and its usefulness for some purpose, and the time during which that usefulness can be enjoyed or had. The usefulness is an absolute element in measuring value and the time; one is just as necessary as the other."

The Company on this question called a number of prominent citizens of Lincoln, whose testimony will be found in this record between pages 576 and 588.

Mr. N. W. Folsom, president of the Nebraska State Bank, and secretary of the Nebraska State Building & Loan Association of Lincoln, testified (Transcript, p. 576):

> "Under those conditions you could not attract capital at all. Anyone looking for an investment would look elsewhere. You might be able to find those who like to speculate and they might pay something, but an investor looking for an investment would not be attracted."

Mr. Frank H. Woods, president of the Lincoln Telephone & Telegraph Company, testified (Transcript, p. 579):

> "I think the hazard would be prohibitive. I do not think you could get any money for investments under those circumstances, except from people who

were already in and who would have to put in more to save their investment."

Mr. C. H. Beaumont, cashier of the Nebraska State Bank, testified (Transcript, p. 584):

> "It would make it practically prohibitive. The attack upon the company, both through its franchise and the regulation of rates, jeopardizes the investment and would effect the ability of the company to get money for extensions and betterments."

Mr. J. E. Miller, director of the First National Bank of Lincoln, and the leading merchant of that City, testified (Transcript, p. 585):

> "A large amount of capital would not be invested under those conditions under any terms. People having money to invest would not invest. Small amounts might be secured on a speculative proposition. Gamblers might be interested, but investors would not put any money into it at all."

Mr. S. H. Burnham, president of the First National Bank of Lincoln, testified (Transcript, p. 588):

> "I do not know of any rate that would be sufficient to induce capital to invest under those conditions."

The Master, in his report and findings, says (Transcript, p. 54) that the question as to whether the Company had a perpetual or temporary franchise is immaterial for the purposes of this case; that the value of the franchise whether perpetual or temporary could not be taken into account.

The Master's reference to the franchise questions in the case were not directed to the point involved. The Company was not asking the Court to determine that it had a perpetual franchise, for the purpose of having

the value of the franchise included in the valuation of its properties. The Company was calling the Master's attention to the fact that the City was contending that the Company had no franchise at all, and that it had no right to occupy the streets or render the service, on the one hand, and, on the other, was contending that the Company should be required to render the service at the rate prescribed by the ordinance in question. The Company was calling the Master's attention to the fact that the City by attacking the right of the Company to occupy the streets and use its property in the manufacture and distribution of gas, imperiled the investments in that property, and made it difficult, if not impossible, for the Company to secure new capital for extensions and betterments, and that if such capital were secured, it would necessarily involve a rate of return commensurate with the hazard involved. The undisputed evidence shows that because of this condition created by the City, the Company is deprived of the ability to get money on an investment basis for extensions and betterments, and as stated by one of the witnesses, this condition rendered it a gambler's chance.

In the Consolidated Gas case, 212 U. S., 19, this Court referred to the security of the investment in that property, and referred to the fact that it was "unthinkable' that the City would permit its streets to be torn up again for a competitor in that business. In this case it is not unthinkable. The City has prepared the way and is attempting to force the result. In New York City, where the Company was secure in its franchise rights, and had for all practical purposes a monopoly in its business, and where the Court could see no possibility of the company being disturbed by a competitor, the Court felt that a six per cent. return on the investment was not confiscatory, noting the fact, however, that the company had made a considerably larger rate

of return for a number of years prior. The City in this case asks that the investment in this Company's properties be considered secure and safe, and as a result asks for a low rate of return, but at the same time is exercising its power to completely destroy the investment and thereby rendering the property practically valueless. The City is in no position to complain of a rate of return sufficient to cover risks and hazards which it has created. If the risk is so great that the property must yield a sufficient return to replace the investment within the short time between the day of judgment of the Court in the case and the day for the return of the execution, the City cannot complain. It is very certain that the City cannot expect cheap gas on a low rate of return in the face of such conditions.

It is the Company's contention, however, that its franchise is perpetual, as set forth in its petition in this suit. The franchise in question was granted by an ordinance passed in March, 1872. Section 1 of the ordinance states that license and permission are hereby given and granted to the company to erect, construct and complete gas works in Lincoln, with authority and permission to use and occupy the streets for the purpose of laying down and repairing pipes and other fixtures. Section 2 of said ordinance states that the Company shall have the exclusive right and privilege of furnishing illuminating gas in the City of Lincoln, for a period of twenty-one years, from March, 1872. It is the company's contention that the grant contained in Section 1 is a perpetual grant to use the streets of Lincoln for the purpose of laying and distributing gas, and that it has been so construed by subsequent acts of both the City and the Company; that Section 2 merely makes that perpetual right an exclusive one for a period of twenty-one years, which period expired in 1893, and was simply an inducement to secure a gas plant

in Lincoln at a time when it was a village of not over a thousand people.

The construction of this franchise by the City and the Company is conclusively shown by the following facts:

First, that in 1890, when the Company was preparing to establish an electric light department in connection with its gas works, the City amended Section 1, extending the franchise right, to include the generation and distribution of electric current (Transcript, pp. 3, 21). This was within three years of the expiration of the exclusive feature of the franchise embodied in Section 2. The amendment was not to Section 2, but to the franchise right granted in Section 1.

Second, that in 1900, seven years after the exclusive feature of the Franchise Ordinance had expired, and at a time when the Company was selling its properties and franchise rights to the Lincoln Gas & Electric Company, the City further amended Section 1 to enable the Company to transfer its properties and franchise, by inserting the words "its successors and assigns" (Transcript, pp. 4, 21). This amendment of the franchise enabled the Company to sell its properties and franchise rights, and that was the purpose of the amendment.

Third, that subsequent to the sale above referred to, the Company put out a bond issue, secured by a mortgage upon all of its properties and franchises, which continues in the original form or in subsequent issues down to this time (Transcript, pp. 146, 208, 210).

Fourth, that the City has continually assessed, for the purpose of taxation, the franchise of this Company, at a valuation of $60,000 (Transcript, p. 144).

Fifth, that the City has passed numerous ordinances since the expiration of the exclusive feature of the fran-

chise grant, regulating the rate to be charged for the service, and fixing the quality of gas to be furnished, and imposing tax burdens upon the gross receipts resulting from such service.

These acts show the construction placed upon this franchise ordinance by the City, down to the time the City deemed it advisable to use it as a weapon on this Company in this rate litigation.

The practical interpretation of an agreement by a party to it is always a consideration of great weight; and there is no surer way to find out what parties meant than to see what they have done.

> Brooklyn Ins. Co. *v.* Dutcher, 95 U. S., 269;
> Philadelphia W. & B. R. Co. *v.* Trimball, 10 Wall., 367.

Contemporaneous construction long acquiesced and practical action will be followed in the construction of statutes which are ambiguous or doubtful.

> Prigg *v.* Pa., 16 Pet., 539.

In all cases of ambiguity, the contemporaenous construction of statutes is controlling.

> Schell *v.* Fauche, 138 U. S., 562.

Furthermore, we deem the franchise rights of the Company are settled by the case of Old Colony Trust Company *v.* Omaha, 230 U. S., 100, in which a similar Ordinance of the City of Omaha was passed upon by this Court.

## IV.

### Going Value.

We submit that the principle is well settled that in valuing the property of a public utility, whether for rate making purposes or otherwise, it is proper to add to the estimated value of the physical elements of said property, a certain value which really and actually inheres in the utility by reason of its being a going concern. This doctrine has been universally recognized, for the reason that it is obvious that even after the mere

physical elements of the untility have been completely acquired and constructed, a still further and substantial sum of money must be invested to get business before the utility begins to earn a fair return. So that a utility which has already acquired business, represents more value than the utility which has no business. It is a more valuable than the utility without cutomers, as it actually would cost to get the amount of business the older utility now has.

The rule has been announced so often that we will not attempt to discuss the authorities, but will merely cite them:

*In re* Monongahela Water Co., 79 Atl. (Pa.), 625.

The necessity of considering "going value" was recognized by the Master in his report. He said:

> "The term 'going value,' as used here, is intended, while excluding franchise and good will, to include another intangible element, which should, I think, be taken into account in the valuation of the property used by the company in the public service, and upon which it is entitled to claim a fair return. * * * The physical property, with all its parts articulated and ready to engage in the business for which it was created, is, of course, a valuable structure, but it is obviously far more valuable when commercially quickened by the outflow of gas and the inflow of revenue. This added value, though hard to estimate, is obvious enough, and cannot in justice and equity be disregarded for whatever purpose the valuation is made. It cost the company

through the years a good deal of money to get the consumers that it has; and even now, with the wide knowledge possessed by the public, of the convenience and economy of gas for light and fuel, it would require much time and expense for a new plant in exclusive possession of the field to build up a like business" (Transcript, pp. 46-7).

The Master is correct when he says that the "going value" of a property is difficult to estimate with precise accuracy. However, it is equally well settled that as long as this element actually inheres in the property, the difficulty of determining its amount should not deter legislative or judicial bodies in making allowance of same, especially where the matter of confiscation of a public utility's property is at stake.

THE MASTER'S ALLOWANCE OF GOING VALUE IS INADEQUATE AND NOT IN THE AMOUNT ESTABLISHED BY THE EVIDENCE.

The reproduction theory of valuation is recognized and applied by Mr. Lea in his estimate of going value of the company's properties in this case and his determination is that the going value of this property is $225,000. He has worked out an accurate table (Transcript, p. 1355), showing precisely how he arived at his conclusion and how long it would take a utility, newly created, to acquire the business of the present Company. His statement is clear and definite and all his figures or estimates were open during the hearings to any objection which the City wished to specify. Yet at no time did the City, during the taking of evidence, offer any method which it deemed proper to measure going value. It refused to measure or take it into account other than by claiming that it was reflected in the physical values given by Mr. A. D. Adams.

So that at the close of the testimony the only estimates of going value were those of the Company's witnesses. Mr. Wettling, the expert for the Nebraska Railway

Commission, approved the method employed by Mr. Lea in determining the going value, and testified from his personal knowledge of the business of this Company, acquired through his directorship since 1901, that the cost of acquiring and retaining business was approximately $30 per consumer (Transcript, p. 798) and which would amount to $240,000 in round numbers for going value (Transcript, p. 799). Mr. Wettling testified in reference to the method employed by Mr. Lea in determining the going value as follows:

> "I have examined Mr. Lea's calculation of the going value, shown in his report and offered in evidence, and I know that it is the method that has been approved by a great many engineers. I have heard it brought forward a great many times and it is a much more specific method than the one most ordinarily used of lumping the matter together by taking the foregone dividends for the whole period and calculating them and sometimes even computing interest up to the time or of taking the cost of acquiring patrons and consumers with a certain unit of cost and applying that to the number of consumers for the number of years. There are a great many methods used, but I think the most approved method, while in a way it is theoretical, it accords thoroughly with the practice, and that is the plan which Mr. Lea has applied. It is as scientific and accurate as any that can be projected" (Transcript, pp. 810-811).

Mr. E. C. Hurd, the engineer for the Nebraska Railway Commission, also testified with respect to going value and approved the method employed by Mr. Lea in determining the going value. Mr. Hurd testified in part, as follows:

> "I have examined and understand the method presented by the tabulation of Mr. Lea to ascertain the going value of the Lincoln plant. Assuming that the figures of costs in Section K of Exhibit 7 are

correct and from my knowledge of this property here and its being in a sucessful situation, my opinion is that he has used an approved method and one that is used and accepted in estimating going value. That is what the going worth in a plant is over and above its physical factors of cost and shows what a man might pay for a property in addition to its physically shown investment because of it being a going concern" (Transcript, p. 819).

In confirmation of Mr. Lea's estimates, if we take three of the other methods of measuring going value, which have been adopted and approved in the cases above cited, and compare them with Mr. Lea's figures, we will have the results as set forth in the following table:

| | | |
|---|---|---|
| Calculated on basis of 20 per cent of: | | |
| Reproduction Value | $1,258,461.00 | |
| Less Going Value | 225,000.00 | |
| Less Working Capital | 72,038.00 | |
| Net Structural Reproduction Value | $ 961,423.00 | $192,285.00 |
| Calculated on basis of 30 per cent of: | | |
| Present Value | $1,090,913.00 | |
| Less Going Value and Working Capital | 297,038.00 | |
| Net Structural Present Value | $ 793,875.00 | $238,162.00 |
| Calculated on basis of cost to acquire patronage at $30 per consumer—8,068 in Lincoln | | 242,040.00 |
| Average of above three methods | | 224,162.00 |
| Mr. Lea's estimate | | 225,000.00 |
| Difference between Mr. Lea's estimate and average of other methods | | 1,000.00 |

Now let us turn to the comments of the Master upon Mr. Lea's method of measuring going value, which was *expressly approved* by the Court of Appeals of New York. The Master says:

> "The expert witnesses who testified in this case are not in agreement as to the method by which going value should be ascertained." * * * (Transcript, p. 47.)

(The City put forward no calculation whatsoever.)

THE MASTER FOUND $140,000 OF GOING VALUE, BUT ERRED IN ELIMINATING $100,000 THEREOF.

The Master says:

> "Whether this element of plant value was purchased entirely by earnings below or above a fair return on capital invested is not, as to a portion of the time at least, disclosed by the company's record. In other words, it does not satisfactorily appear to just what extent the company's business was acquired at its own expense, and to what extent it was acquired at the expense of the public. The company was, at all times, entitled to a fair return upon its investment, and whatever was received by it in excess of a fair return should go, in some form, to the credit of the public. If employed in the promotion of new business, the value of such business has manifestly no place in the valuation made as a basis for fixing reasonable rates. The record shows that between 1906 and 1913, the company paid out of its earnings and charged to operating expenses about one hundred thousand dollars ($100,000.00) for the promotion of new business. In view of this fact, I conclude that an allowance of $40,000.00 for going value is sufficient" (Transcript, p. 47-48).

The Master's conclusion involves the following propositions:

1. That, in the absence of proof, it will be assumed that there were excess earnings prior to the passage of the ordinance in question.

2. That, in the absence of proof, it will be assumed that some portion, or all, of the company's properties were acquired out of such excess earnings.

3. That, in the absence of proof in this case, he assumes that $100,000 of plant value was acquired through past excess earnings.

4. That all past earnings which, upon such assump-

tion, were in excess of a fair return, were unlawfully acquired by the company, and should be "credited to the public."

5. That such "credit" should take the form of a *pro tanto* reduction of the present value of the company's property.

6. That if any portion of the company's property was purchased from such assumed excess earnings, that the company has no interest therein, and the same should thereafter be devoted to public use, without compensation.

These propositions of the Master would establish the following doctrines:

1. That the value of the property of a company, and the net result of its operation, for each of the years of the properties' existence, prior to the passage of the ordinance in question, can, in the absence of proof, be determined upon the basis of an assumption, since the question of excess rates must necessarily depend upon the value of the property at any given time employed in the public use, and the net earnings resulting from such use.

2. Further, if the earnings upon the property, prior to the passage of the ordinance in question, are to be considered in determining the validity of the ordinance, then the losses prior to the passage of the odinance would, likewise, have to be considered, and the present value of the property and the present rate of earnings would be more or less depending upon the amount of such losses.

3. That a rate ordinance is not only effective from and after the date of its adoption, but is given a retroactive effect, and requires the company to give a

complete accounting for all of its earnings and expenditures on its property and operation, from the beginning of its business, involving a presentation of a valuation of its properties during all of such time.

4. That the long established rule that, in determining the validity of rate regulation, the present value of all property employed in the service should be considered, irrespective of the manner of its acquisition, should be abrogated.

5. That the long established rule that, the earnings of a company, prior to rate regulation, belong to the company, whether distributed by the company or reinvested in its properties, and that the same are private property and cannot be taken or required to be employed for public use without just compensation, should be abolished.

The Master's deduction of $100,000 from the going value of the Company's properties compel a consideration of the following:

1. Are rates charged prior to rate regulation unlawful if it should subsequently develop that such rates yielded more than a fair return on a fair value of the property employed?

2. The company's earnings in excess of rates fixed by law may be regarded as excess earnings, but in the absence of rate regulation, can any part of the company's earnings be said to be excess earnings?

3. The company's property devoted to public use immediately becomes subject to public control and regulation, but until the public authorities regulate the rate, the company is free to fix its own rate of charges, and such charges are not unlawful, and the earnings resulting belong to the company.

4. In the absence of rate regulation, it must be assumed that the rates established by the company are satisfactory to the public, since the public has the right at any time to step in and fix a reasonable rate.

The Evidence Shows no Excess Earnings in the Past.

This statement of the Master's is so important, and announces a doctrine which is, we submit, so completely unsound, and is so repugnant to the fundamental principles of law governing rate regulation, that we deem it not out of place to give time, at this point, to its complete discussion and analysis.

In the first place, the Master is in error when he says, "The record does not disclose whether this element of plant value was purchased entirely by earnings below or above a fair return on capital invested." We insist that the record does make such a showing, and, if examined, will reveal the fact that the Company, throughout the greater part of its existence, must have been in rather dire straits and could not have had excess earnings. To be sure, inasmuch as the property was built in 1873, it was impossible to produce and put in this record a complete accounting of the properties' financial history from its inception down to the end of the last century. But the testimony of witnesses who were familiar with the facts, shows that from 1900 on, the financial condition of the Company was such that to charge it with having acquired excess earnings is little short of ridiculous. Mr. Honeywell, the Company's manager, testified (Transcript, p. 149) that in 1904, the Company was about $40,000 behind in its bills and taxes and was unable to maintain its plant and meet the interest on its bonded debt, and that the emergency thus existing required a contribution of $100,000 from stockholders. It goes without saying that this situation did not arise immediately, but must have been

growing for a period of three or four years at least. This gives us a general statement of the Company's financial position from 1900 to 1907. The record in this case shows what has transpired since that latter date. The only period during which no precise figures of earnings or valuation were produced was the period between 1873 and 1900; but from an examination of the Company's gas sales and other statistics which are in the record, any suggestion of excess earnings between the period of 1873 and 1900, can be eliminated from further discussion. For instance, the gas sales of the Company increased from nothing in 1873, to only 20,000 M. cubic feet of gas per annum in 1889, and had only increased to 42,000 M. cubic feet of gas by 1899; whereas, in 1912, the gas sold was 227,000 M. cubic feet per annum (Transcript, p. 1359). Thus, it will be seen at a glance that the greater part of the Company's gas sales were procured between 1900 and 1912, as represented by the difference between 42,000 M. cubic feet and 227,00 M. cubic feet. It is rather absurd to suppose that there could be any excess earnings resulting from gas sales which had developed in 27 years only to 42,000 M. cubic feet per annum. Furthermore, we can see that the Company's investment in the years mentioned prior to 1900, must have been considerable in comparison with the amount of gas sold. The construction account in 1890, showed an investment of $160,149.55, and in 1900, an investment of $407,620.46 (Exhibit 158; Transcript, p. 8196). By 1899 the Company had 75,000 feet of mains, 850 house services, and 1,100 meters. By 1900, its mains had increased to 159,000 feet, its house services to 2,000, and its meters to 3,500 (Transcript, p. 1360, 1361, 1362).

In view of these facts, although the record does not show the precise earnings and the exact valuation in each of the years prior to 1900 (and that is impossible to procure), it may be fairly gathered from the record

that such a thing as past excess earnings were an impossibility.

Furthermore, the testimony of Mr. Wiggins (Transcript, p. 210) shows, that since 1890 at least, neither the Company nor its predecessors ever paid any divdends upon its capital stock, and prior to that time the record is silent as to divdends.

If we view the statement of the Master from another standpoint, it will be seen at once what far-reaching consequences there are to the doctrine which he announces, where legislative enactment seeks to control the rates of property devoted to public use. If it is claimed by a utility that such enactment is confiscatory, the burden of proof is upon the utility to establish such fact. The error which the Master has fallen into is, that he applies this doctrine to periods prior to the enactment of the rate ordinance which is being attacked. Now, if it is incumbent upon the utility to show that during no year or month of its existence it earned a rate of return in excess of a fair return upon the value of its property, as it existed at any particular period, upon the assumption that any such excess should be "credited to the public," and, therefore, deducted from the plant value of the utility, a burden would be placed upon the utility attacking such legislation which it would be quite impossible for it to sustain. It would be, in most cases, an impossible thing to prove, and the result of such a doctrine would mean that there would be no such thing as a limitation upon the power of rate regulation.

Mr. Justice Harlan, in Smyth *v.* Ames, *supra*, placed a clear limitation upon a rate-regulating power when he announced the doctrine that rate regulation must not be such that it would deprive a utility of a fair return upon the *present value* of its property, and in the prior appeal in this case, Mr. Justice Lurton (p. 458) said:

> "The valuation fixed by the Court is the main point of attack. That the company is entitled to a fair return upon the value of the property at the time of the inquiry is the rule."

If, however, the Master's doctrine is to be sustained, the limitation originally announced by Mr. Justice Harlan, would be, in effect, nullified by the expedient of placing a burden of proof upon a utility to show that at no time in its history, prior to the regulating ordinance, it earned a return in excess of a fair rate.

But if the Master, lacking proof upon past earnings, is to make any assumption that a certain amount of plant value might have been created through excess earnings, where is this assumption to stop? Why does he limit it to $100,000, and why limit it to going value? What reason is there, according to his theory, for stopping at any figure, and why would he not be justified, if his theory is to apply, in assuming that the entire plant of the company was purchased by past profits in excess of a fair rate of return, so that the utility could be then devoted to public use without any compensation whatsoever. There is, we submit, no possible justification for the Master's assumption, for if the assumption is allowed to stand, there can be no limitation to the values of which the utilities can be stripped by this process. The Master's theory is, we maintain, absolutely specious and unsound, and has no justification either in law or reason.

In this connection, however, we beg to bring to the attention of the Court the fact that this utility has been regulated by constituted authority from the moment of its existence. In the ordinance which granted its franchise, in 1873, a maximum rate for gas was fixed (Transcript, p. 3). Furthermore, in 1899, a further rate regulating ordinance was enacted, which prescribed maximum rates which the company could charge for

gas which fixed a sliding scale of gas rate until October 1, 1905 (Transcript, p. 271). This situation, of a utility actually being regulated from the moment of its existence, creates, we submit, a presumption (if any presumption is to be made), that at no time was the return of the company in excess of a fair rate upon the value of its property devoted to public use.

THE MASTER IS IN ERROR IN RESPECT OF THE UNDERLYING DOCTRINE OF RATE REGULATION REFERRED TO IN THE PROPOSITIONS HERETOFORE SUMMARIZED.

We submit that the Master has fallen into an error (which is not infrequent), due to a misconception of the terms and phrases which are very often used in cases involving rate regulation.

Where property is devoted to a public use, it is subject to regulation and control by the public authorities, not only as to service, but also as to rates. This is a condition which inheres in the operation of such property the moment it is devoted to a public use, and continues as long as it is operated for such use. On the other hand, there is a limitation in the exercise of this rate-regulating authority, which grows out of the Fourteenth Amendment of the Constitution of the United States, and that limitation is, that regulation must not go beyond the point where it deprives the owner of the property of a fair return upon the value thereof. This doctrine has frequently been briefly summarized by the statement that all property devoted to public use is subject to regulation and control, but that regulation and control must be such as not to deprive the owner of the property of a fair rate of return upon the value of such property. In the frequent application of this doctrine, the phrases used in applying the same have been very often loosely constructed, with a view of stating the result of the doctrine, rather than its reasons; and so we have often heard it said that a property

devoted to a public use is only entitled to earn a fair return upon the value of such property. This statement of the rule creates an ambiguity, in that it implies that, irrespective of regulation, the property devoted to a public use is only entitled to earn a fair return upon its value; whereas, a correct statement of the doctrine is, that such property so devoted to a public use is always *subject to be controlled* to such an extent that it can earn no more than a fair return upon its value; but *until the rate-regulating authority deems it expedient to act* in respect of regulation of rates, a property devoted to public use is not subject to restriction in its earnings, other than the *possibility* of regulation which may be applied to it at any time, subject to the limitation above set forth.

Due to this misconception, we frequently hear the theory advanced, at the present time, that if, prior to regulation, a public utility has earned more than a fair return upon its value, this excess is an amount which should be placed to the credit of the public; that the public has paid more than the utility was entitled to collect for its service, by reason of the fact that from the instant of its creation as a public utility a rule automatically applied to it which prevented its making a profit in excess of a fair return. This is, we submit, error, and those who advance this doctrine have completely lost sight of the fundamental principles governing the relation of utilities to the public.

We need go back no further than the case of Munn *v.* Illinois, 94 U. S., 113, where Mr. Chief Justice Waite, in his learned opinion in that case, laid down some of the fundamental principles governing rate regulation. After considering at some length the early English decisions by which the rates in respect of ferrys, common carriers, hackmen, bakers, millers, wharfingers, innkeepers, &c., were fixed by statute, he says, at page 125:

"This brings us to inquire as to the principles upon which this power of regulation rests, in order that we may determine what is within and what without its operative effect. Looking, then, to the common law, from whence came the right which the Constitution protects, we find that when private property is 'affected with a public interest, it ceases to be *juris privati* only.' This was said by Lord Chief Justice Hale more than 200 years ago, in his treatise De Portibus Maris, 1 Harg. Law Tracts, 78, and has been accepted without objection as an essential element in the law of property ever since. Property does become clothed with a public interest when used in a manner to make it of public consequence, and affect the community at large. When, therefore, one devotes his property to a use in which the public has an interest, he, in effect, grants to the public an interest in that use, and must submit to be controlled by the public for the common good, to the extent of the interest he has thus created. He may withdraw his grant by discontinuing the use; but, so long as he maintains the use, he must submit to the control. * * *

"So if one owns the soil and landing-places on both banks of a stream, he cannot use them for the purposes of a public ferry, except upon such terms and conditions as the body politic may from time to time impose; and this because the common good requires that all public ways shall be under the control of the public authorities. This privilege or prerogative of the King, who in this connection only represents and gives another name to the body politic, is not primarily for his profit, but for the protection of the people and the promotion of the general welfare."

The Court then quotes at length from numerous common law decisions, and then proceeds, as follows (p. 130):

"But we need not go further. Enough has already been said to show that, when private property is devoted to a public use, it is subject to public regulation. It remains only to ascertain whether the

warehouses of these plaintiffs in error, and the business which is carried on there, come within the operation of this principle."

Page 133:

"It matters not in this case that these plaintiffs in error had built their warehouses and established their business before the regulations complained of were adopted. What they did was from the beginning subject to the power of the body politic to require them to conform to such regulations as might be established by the proper authorities for the common good. They entered upon their business and provided themselves with the means to carry it on subject to this condition. If they did not wish to submit themselves to such interference, they should not have clothed the public with an interest in their concerns. The same principle applies to them that does to the proprietor of a hackney-carriage, and as to him it has never been supposed that he was exempt from regulating statutes or ordinances because he had purchased his horses and carriage and established his business before the statute or the ordinance was adopted."

From this decision it is apparent that where property is devoted to public use, the owner "must submit it to be controlled by the public for the common good," and this right of control is a privilege or prerogative of the king or body politic. It will be noted that the Learned Chief Justice does not say that where the property is devoted to public use, an inhibition automatically applies, which prevents it from charging more than a reasonable rate; but upon being devoted to such public use it immediately becomes "subject to public regulation." He specifically says that it does not matter that the warehouses in question had been built and their business established before the regulation was adopted, but they acted from the beginning "subject to the power of the body politic to require them to conform to such regulations as might be established."

So, too, in Smyth *v.* Ames, 169 U. S., 466, Mr. Justice Harlan said (p. 545):

> "A corporation maintaining a public highway, although it owns the property it employs for accomplishing public objects, must be held to have accepted its rights, privileges and franchises subject to the condition that the government creating it, or the government within whose limits it conducts its business, may by legislation protect the people against unreasonable charges for the services rendered by it. * * * The corporation may not be required to use its property for the benefit of the public without receiving just compensation for the services rendered by it. How such compensation may be ascertained, and what are the necessary elements in such an inquiry, will always be an embarrassing question. * * *
>
> "We hold, however, that the basis of all calculations as to the reasonableness of rates to be charged by a corporation maintaining a highway under legislative sanction must be the fair value of the property being used by it for the convenience of the public. * * * What the company is entitled to ask is a fair return upon the value of that which it employs for the public convenience. On the other hand, what the public is entitled to demand is that no more be exacted from it for the use of a public highway than the services rendered by it are reasonably worth."

In this case the Court went further than in the case of Munn *v.* Illinois, and expressed the limitation which should apply to the power of regulation and control, that is, that it should not be such as to deprive the owner of the property of a fair return upon the value thereof.

In the Railroad Commission Cases, 116 U. S., 307, Mr. Justice Waite, again said, page 325:

> "It is now settled in this Court that a State has power to limit the amount of charges by railroad

> companies for the transportation of persons and property within its own jurisdiction, unless restrained by some contract in the charter, or unless what is done amounts to a regulation of foreign or interstate commerce. * * * This power of regulation is a power of government, continuing in its nature, and if it can be bargained away at all it can only be by words of positive grant, or something which is in law equivalent."

Page 331:

> "From what has thus been said, it is not to be inferred that this power of limitation or regulation is itself without limit. This power to regulate is not a power to destroy, and limitation is not the equivalent of confiscation. Under pretense of regulating fares and freights, the State cannot require a railroad corporation to carry persons or property without reward; neither can it do that which in law amounts to a taking of private property for public use without just compensation, or without due process of law."

It will be noted from this language that this power of regulation is a thing which can be bargained away by the public authority, which clearly indicates that no automatic rule applies to property immediately upon its being devoted to public use, but that the power to control is something which could be waived by the authorities empowered to exercise it.

In C. B. & Q. Railroad Co. *v.* Iowa, 94 U. S., 155, Mr. Chief Justice Waite again said:

> "It is a matter of no importance that the power of regulation now under consideration was not exercised for more than 20 years after this company was organized. A power of government which actually exists is not lost by nonuser. A good government never puts forth its extraordinary powers, except under circumstances which require it. That government is the best which, while performing all

its duties, interferes the least with the lawful pursuits of its people."

Clinton Telephone Case, Wis. R. C. R., Vol. 3, page 126.

From all of the foregoing, it will appear that the Master has fallen into error where he seeks to imply that there is a question not clearly established by the evidence as to whether the plant value represented by its going value was "purchased entirely by earnings below or above a fair return on capital invested," as he says: "It does not satisfactorily appear to just what extent the company's business was acquired at its own expense, and to what extent it was acquired at the expense of the public." That he has entirely misconceived the principles of rate regulation is shown by the following sentence: "The company was at all times entitled to a fair return upon its investment, and whatever was received by it in excess of a fair return should show in some form to the credit of the public."

Furthermore, the extension of this doctrine to its logical conclusion would bring about an absurd result. Assume, for example, that a public utility was constructed and put in operation prior to the exercise of any rate regulating authority; assume, further, that a reasonable rate of return would have been held to be eight per cent., if the rate regulating authority had been exercised; assume, further, that this hypothetical utility earned, for the first ten years of its existence, eighteen per cent. upon the value of its property, or ten per cent. in excess of what would have been held

to have been a fair return, in the event that the regulating authorities had acted. At the end of the ten years the company would have earned not only eight per cent. annually on the value of its property, but, also, in addition, an aggregate of one hundred per cent. of its value; in other words, the original investors would have received from earnings their entire capital investment, plus an annual revenue of eight per cent. thereon. If we assume that at the end of a ten-year period the rate-regulating authority deemed it expedient to act, and a valuation of the company's properties was ordered and had, in accordance with the doctrines announced by the Master, it would then appear that, inasmuch as one hundred per cent. of the value of the property was "acquired at the expense of the public," and, therefore, should "show to the credit of the public," that the public would have the right to step in and take the plant away from the owners, without any compensation whatsoever, or, in the alternative, to compel them to operate the plant from then on and *ad infinitum*, without profit. This, we submit, is an absurd conclusion.

We desire to bring to the attention of the Court what we submit is a misconception which has crept into the opinion of this Court in the case of Des Moines Gas Company *v.* Des Moines, 238 U. S., 153. In considering the value of the utility in that case, by reason of the fact of its being a going concern the Court discussed this feature of value as inhering in a property because of its early losses. Mr. Justice Day there said (p. 165):

> "Included in the going value as usually reckoned is the investment necessary to organizing and establishing the business which is not embraced in the value of its actual physical property."

This is, we submit, not strictly accurate, in view of the fact that in that case, as in here, the present value

of the property was being determined by the application of the reproduction theory; in other words, the Court in that case was not endeavoring to ascertain the "original cost," or "investment value" of the company's property, but it was endeavoring to ascertain the "present value" of the property, established by fixing the cost of reproducing the plant in its present condition. Consequently, the item of going value should be fixed in the same way; in other words, not by reference to the investment in establishing the business, but by the cost of reproducing said business already established:

It will be seen that from this misconception has arisen another inaccuracy, which is contained in the language of the Court immediately following the sentence above quoted. The Learned Justice then proceeds as follows:

> "In this case, what may be called the inception cost of the enterprise entering into the establishing of a going concern had long since been incurred. The present company and its predecessors had long carried on business in the City of Des Moines, under other ordinances, and at higher rates than the ordinance in question established. For aught that appears in this record, these expenses may have been already compensated in rates charged and collected under former ordinances. As we have said, every presumption is in favor of the legitimate exercise of the rate-making power, and it is not to be presumed, without proof, that a company is under the necessity of making up losses and expenditures incidental to the experimental stage of its business."

From this language, we submit that an erroneous conclusion might be drawn, to the effect that if a utility, whose rates are being regulated and whose property is being appraised, has concededly a going value, yet, it might be presumed, in the absence of proof to the con-

trary, especially if the utility was long established, that the so-called early losses had been made up by returns in excess of a fair return, prior to regulation; and that such a presumption, in the absence of proof, would eliminate any consideration of the going value which inhered in the Company's properties.

We submit that the proper doctrine is, especially where the reproduction theory is being applied, that it makes no difference what the early losses of the particular company in question were, or whether or not they had been made up by so-called "excess profits" in the past, prior to the exercise of regulative control. The fact to be considered is, we submit, that in the utility being valued a certain element of value inheres in its property, by reason of the fact that its business is established, and that this element of value is just as real as the value of its physical properties, and that the problem to be determined is how much more valuable is the plant in question with its established business than a plant similarly situated without business; and this leads to the further question, how much would it cost at the present time to establish the business which the company has? We agree that this question is not free from difficulties, but we submit that it is not to be solved by any proof of the actual early losses which any particular company sustained, or by any presumption that those earnings may have been made up by "excess profits" in the past, prior to rate regulation.

In our case, if there is any presumption at all, we submit that the presumption should be in favor of the appellant herein, inasmuch as from the organization of this utility its rates have not only been subject to control, but have actually been regulated by specific ordinance, so that it should be presumed, if any presumption is to be made, that the rates so fixed by ordinance allowed only a reaonable return to the utility.

The Master allows as the going value of the Company some $40,000, but in connection therewith he makes this statement: "The record shows that between 1906 and 1913 the Company paid out of its earnings and charged to operating expenses about $100,000 for the promotion of new business. In view of this fact, I conclude that an allowance of $40,000 for going value is sufficient." This statement of the Master is quite clear, and it means the following: That it would cost to establish the present business of the Company $140,000, but, inasmuch as the Company has expended $100,000 from earnings, and it does not appear as to whether or not those earnings were partly in excess of a reasonable return, and, also, the money so expended was charged to operating expenses, that it should be deducted from that element of value known as going value, which inheres in the Company's properties.

We submit that this doctrine is quite erroneous; that from the Master's own finding the going value of the Company's properties was $140,000; that it is quite immaterial, as clearly stated in the case of People *ex rel.* Kings County Electric Lighting Co. *v.* Willcox, *supra*, and *In re* Application of Public Service Gas Company, report of New Jersey Commission, Vol. 1, p. 433, that this was charged to operating expenses, and that, therefore, "the Company received it back." Whether the amount so expended was received back or not, because charged to operating expenses, the fact remains that the value so established by virtue of said expenditure inheres in the property as of the time the Master's valuation was made, and, inasmuch as his problem was to determine the value of the Company's property at that time, there is no justification in law or reason for not allowing the full sum of $140,000 as such going value."

THE MASTER INDICATED NO BASIS FOR THE DETERMINATION OF GOING VALUE.

We have endeavored, without success, to determine why the Master shows only $140,000 as the going value of the Company's property. If there was any basis for the adoption of this figure, or whether any method whatsoever was applied by the Master in arriving at this amount, the report does not disclose it. His report makes it clear that there is a going value which should be taken into account in the valuation of the property, and that the difficulty in estimating this element of value should not excuse the Court for failure to make a proper determination in respect thereof. He said (Transcript, p. 46):

> "the public is entitled to be served at reasonable rates and that the company rendering the service is entitled to a fair return upon the value of the property used by it in the service. This statement has become, by judicial iteration, an axiom in the law of rate making, and the demand of the company to have it applied in this case is not answered by pointing out difficulties besetting its application. Constitutional guarantees for the protection of private property are not to be set aside, because precision and exactitude in making valuation are not practically attainable. * * * This added value, though hard to estimate, is obvious enough, and cannot in justice and equity be disregarded for whatever purpose the valuation is made."

It is clear from this language that the Master recognizes his responsibility to estimate and determine the going value which inheres in the Company's properties, and further recognizes the fact that the difficulty in estimating the same should not be made a deterring factor in granting the Company the full value of this intangible element.

We submit that the Master in reaching his conclu-

sions as to going value, must look to the evidence in this case, or, at all events, if he uses some method or basis of calculation not advanced by any of the witnesses who testified before him, that he should set forth precisely what this method or basis was which he used, and explain why the methods advanced by the various witnesses were rejected, and why he deemed it more advisable to use the method which he adopted, rather than the method advanced by the various witnesses. Especially is this true where the method employed by him, whatever it was, results in the reduction of all amounts shown in calculations submitted by any of the witnesses, of approximately $85,000. He comments briefly in his report on the method advanced by the witnesses, and criticises some of them, but he does not disclose the alternative method which he adopted in arriving at his conclusions. He said (Transcript, p. 47):

> "The expert witnesses who testified in this case are not in agreement as to the method by which going value should be ascertained. The essence of the process suggested by one of the witnesses is to consider the length of time it would take a person who wanted the business to acquire its equivalent, and then determine the price such person would be willing to pay."

The Master is here referring to the method testified to by the City's witness, Mr. Alton D. Adams, and in this connection we beg in direct the Court's attention to the fact that in spite of repeated and persistent efforts on behalf of counsel for the company, Mr. Alton D. Adams positively refused to give any actual valuation by the employment of the method he suggested, or by any other method whatsoever (Transcript, pp. 1040-1044). He was examined at some length on this matter, and testified as to the various elements which should be considered in making up the measure of going value, but he positively

refused to make any calculation or give any figures resulting from the application of such measure, and at the close of the testimony there was no figure in the record by which the going value of the Company was actually measured by any of the City's witnesses.

As heretofore shown, Mr. Lea, the Company's witness, testified as to the going value of the Company, and stated in his opinion that the same was $225,000, and in justification of his figure he set forth in detail his method of computation, and described at length the elements going into this valuation and the cost of acquiring the business which the company had. This is set forth in Exhibit 7 (Transcript, pp. 1352-5). This method of Mr. Lea's was approved by Mr. Wettling, the expert for the Nebraska Railway Commission, and by Mr. Hurd, the engineer of the Nebraska Railway Commission, and Mr. Wettling further testified the result by a computation of his own, based on the actual experience of the Lincoln Company, which was a matter of his personal knowledge. The Master dismisses from consideration Mr. Lea's method of measure going value, as follows (Transcript, p. 47): "This method seems to me highly artificial, and is, at best, only moderately persuasive." He fails to point out, however, wherein the computation of Mr. Lea is in error, or in just what respect it fails to show the actual value of the Company's business. Furthermore, the method employed by Mr. Lea was approved and applied in the case of People *v.* Kings County Electric Company, *supra.*

The Master states (Transcript, p. 47) that the evidence does not give any adequate basis for the ascertainment of going value by capitalization of early losses. In this he is correct, as no evidence was introduced on the subject, and none was available, and none of the witnesses attempted to measure going value by this means.

The Master, therefore, dismisses from consideration

all methods of computing going value which were offered in evidence, with concrete results. He does not comment on the method advanced by Mr. Alton D. Adams, other than to state what it is, but this method of measuring going value, not being accompanied by any computation showing its actual application, could not have been the basis for any of the Master's conclusions.

It is the position of the Company, and we have always insisted since the filing of the Master's report, that if the Master is to repudiate and discredit the methods of measuring going value which were used by the witnesses who testified before him in calculating the amount of going value and the amounts which they advanced as their opinion represented the going value of the Company, were to be cut down by the Master to the extent of at least $85,000, it was the duty and obligation of the Master to set forth in precise details what method was deemed by him to be the proper one in measuring this element of value. He does not do this. His report contains not the slightest suggestion of how he arrives at his conclusions on this matter. He merely sets forth catagorically his determination that the going value of the Company is worth $140,000. By disposing of the matter in this way, he renders it absolutely impossible for the Company to point out any errors in the method employed or the results obtained from the employment of such method; in other words, he conceals the method by which he reached his figure. This, we submit, is not in conformity with the instructions of the Supreme Court in reversing this case on the trial appeal and remanding the same for complete findings.

Another point which we wish to bring to the attention of the Court is the Master's assumptions with regard to the profits and losses. As to losses, he says

that the evidence gives no adequate basis for their ascertainment, whereas, as to profits, he assumes, in the absence of evidence, that there were past excess profits. This raises two questions: (1) What is the justification for an assumption in respect of profits that does not equally apply to losses? (2) How can profits be assumed or ascertained without a knowledge of losses, both of which go to make up the net result of the company's operations?

We submit that the Company has proved by the preponderance of competent evidence that the going value of the Company's properties is $225,000, but that, furthermore, according to the Master's own finding, the going value of said properties should be not less than $140,000.

## V.

## Valuation for 1907.

### (1)—Mathematical Error of the Master.

The Rate Ordinance here under consideration was adopted in December, 1906; therefore, the valuation of the Company's properties as of January 1st, 1907, is of particular importance, because the year 1907 was the first year in which the rate was intended to take effect.

We submit that the Master in his report (which was confirmed by the Court below), has made, in his determination of the value of the Company's properties as of January 1st, 1907, a simple mathematical error. A proper adjustment of this error upon the basis of the Master's own findings will, we submit, completely upset the Master's conclusions.

It will be recollected that the testimony was taken before the Master after January 1st, 1913, and that all valuations were made as of that date. So that having determined the January 1st, 1913, valuation, it was then

necessary to work back over a period of six years to determine the valuation as of January 1st, 1907. This was done by the experts who were the two principle witnesses for the Company and the City.

The Master said:

> "If the value of plaintiff's property, tangible and intangible, on January 1, 1913, was $676,565, as I have found it to be, its value January 1, 1907, may be readily ascertained by eliminating all values added to the plant between these dates." (Transcript, p. 52.)

He then enters upon a discussion of the construction which had taken place between January 1st, 1907, and January 1st, 1913, and after making certain adjustmens he states:

> "but from a full consideration of the evidence, I find that all values, tangible and intangible, added to the plant between January 1, 1907, and January 1, 1913, were worth at the latter date $240,000. Deducting this amount from $676,565, the value of January 1, 1913, leaves $436,565, representing the investment upon which the Company was entitled on January 1, 1907, to receive a fair return." (Transcript, p. 52.)

It is just here that the Master makes his mathematical error, which is this: His 1913 valuation was a present value, that is to say, a value of the Company's properties as of January 1st, 1913; in other words, a *depreciated* value. Therefore, included in the figure $676,565 (the 1913 valuation), there is embraced the property which the Company owned in 1907, valued as it existed in 1913, that is, with the depreciation from 1907 to 1913 deducted before the final value was arrived at. To express it another way: The property which the Company owned in 1907 was included in the Master's 1913 figure, at a value reduced by six years'

depreciation. When, therefore, the Master deducts from his 1913 valuation "all values, tangible and intangible, added to the plant between January 1, 1907, and January 1, 1913," which "were worth *at the latter date* $240,000," he reached a result which represented the property owned by the Company in 1907, less the amount which it had been depreciating from year to year between 1907 and 1913.

The only question which remains, in order to adjust the Master's 1907 valuation to his own figure, is to find out just how much the property, as it existed in 1907, was depreciating each year, in order to add this amount to the value of that same property as it existed in 1913. Now, the Master found that in 1907 a sufficient allowance for a depreciation reserve, to be charged into the operating expenses of that year, was $10,000; that is to say, in 1907 the Company's property then owned was depreciating at the rate of $10,000 a year. Obviously, therefore, this property was worth $60,000 less in 1913 than in 1907. In order, then, to recast the Master's figures and work back from his 1913 valuation to 1907, it will be necessary to add $60,000 to the sum of $436,565, which the Master found as the 1907 valuation. On the basis of the Master's own findings, therefore, the 1907 valuation should be $496,565, instead of $436,565.

The Master, after figuring the company's gross and net income, and what he considers a proper allowance for operating expenses, concludes that the company would have earned, in 1907, with gas selling at $1.00 per M cubic feet, 5.12% upon the value of its property. However, if we adjust the error in the Master's figures, as pointed out above, we find that the return in that year, on the valuation as the Master found it, was only 4.5%.

If we go further, and add to the 1907 valuation the $100,000 of going value which the Master found existed, but which he left out of his calculation for the reasons

heretofore stated, we would have a valuation in 1907, of $596,565, and a rate of return of 3.7%.

In view of the evidence in this case, can this be said to be a fair return on the value of the company's properties in the first year in which the ordinance was to be effective? If we grant that the ordinance was invalid, because confiscatory, the first year that it was to be operative, this eliminates the necessity of further consideration of any of the subsequent years.

Even though the Master, on the basis of his own findings of values and returns, and including the error which his own figures show, finds a return of but 5.12% for the year 1907, he also finds that "a rate not lower than six per cent. upon their invested capital could not be regarded as confiscatory." He justifies his upholding the rate by the following:

> "All human experience has shown that increased consumption follows quickly a reduction in the price of commodities, and the evidence in this case satisfactorily shows that gas is no exception to the rule. I find that with gas selling at $1.00 per M cubic feet, plaintiff would have received since December 1, 1907, when the rate ordinance was to be effective, not less than 6 per cent. per annum upon the value of the property employed by it in serving the people of Lincoln" (Transcript, p. 55).

The entire basis for the Master's conclusion that the Rate Ordinance was valid, is based upon his mere speculation that with the reduced rate the sales of gas would have so greatly increased that they would have made up the difference between the $1.00 rate and the $1.20 rate; although there is no evidence in the record, either opinion or otherwise, which would indicate that such effect would take place the first year after the ordinance was put into effect. We submit that there is no warrant or justification for such a conclusion, and that the com-

pany's properties should not be confiscated by the hypothetical deductions of the Master.

From a consideration of the above matters, we respectfully submit that the testimony in this case, even on the basis of the Master's own figures, conclusively proves that the properties of the appellant were confiscated by the Rate Ordinance, which is the subject matter of this suit, and that said Ordinance is, and was, since the time of its adoption, null and void.

(2) MASTER'S 1907 VALUATION NOT SUPPORTED BY THE EVIDENCE.

The Master's valuation for 1907 is so clearly inadequate, and the basis for it so concealed as to require the Court, in our judgment, on this appeal to set it aside and fix a value in a proper and adequate amount.

The Master fixed the present value of the Company's properties, as of January 1, 1907, at $436,565. This is the Master's present value for the whole property. There is nothing in the Master's report and findings showing (1) his valuation of any particular portion of the Company's property, but the value is given in a lump sum for the whole property; (2) there is nothing to show the Master's present value of the physical properties of the Company as of that date; (3) or to show the Master's value for intangible properties of the Company as of that date; (4) or to show the amount of working capital included in the value of the Company's properties as of that date; (5) or to show the amount of accrued depreciation in any portion or all of the Company's properties as of that date; (6) or to show the Master's figure for replacement cost of any part or portion or the whole of the property valued as of that date. The Master simply gives a valuation in which he has combined the tangible and intangible properties of the company, presumably from his valuation of 1913, and gives a lump sum of $436,565 as the

present depreciated value. It is impossible for the Company to compare this lump sum, including, as it does, both tangible and the intangible properties, and including working capital, with the replacement cost and present value of the physical properties of the Company, as shown by the evidence, or as found by Judge Munger upon the former trial.

The construction account of the Company, running back to 1873, showed construction, after making all proper credits for reconstruction, in the amount of $589,887.84 (City's Exhibit 185; Transcript, p. 1896). This amount shown in the construction account does not include (1) working capital, (2) going value, or (3) overhead expenses, such as were considered and allowed by the Master in his valuation for 1913. This amount shown in the construction account simply represents the labor and material cost, without the ordinary overhead entering into the construction of the physical properties of the Company. There is evidence in the record to show that the construction account, as carried by the Company on its books, did not include all of the new construction or all of the items which should be included in the construction account.

Mr. Wiggins, expert accountant, was called by the City as a witness, and testified that in the preparation of the Exhibit 185, he had gone outside of the construction account to get one item of $20,000, which he brought in as a proper item to be added to the construction account (Transcript, p. 1254). It developed in the course of Mr. Wiggins' examination that he had devoted considerable time checking over the books and records of account of the Company, and prepared an Exhibit, which the City introduced in evidence, showing the amount charged to construction on the books of the Company from 1873 to 1912. This Exhibit, down to 1907, was prepared by Mr. Wiggins, and was offered

in evidence upon the former hearing, and is Exhibit E (Transcript, p. 253), and the items entering into the construction account for each of the years, as prepared by Mr. Wiggins and offered in evidence by the City, are found on pages 305 to 387. The construction account shown in the Exhibit presented by the City, showed $603,278.14 entered in the account up to June 30, 1907. After this case was referred to the Master, Mr. Wiggins, for the city, brought the construction account down to 1912, and submitted Exhibit 158 (Transcript, p. 1896-1897), and also an Exhibit showing the credits in this account from 1873 to 1912 (Transcript, p. 2037-2061). Mr. Wiggins testified:

> "I found an honest effort on the part of the Company to keep a correct record of the cost of the expenditures of the Company, and found nothing to criticize in the showing of the income and expenses (Transcript, p. 1252). * * * In 1873 the construction account was some $54,000 and the next year only $887.31, and the next year I found nothing (Transcript, p. 1253). * * * My Exhibit shows the total construction account up to 1890, the total there is $203,450.83."

At page 207, upon the former hearing, Mr. Wiggins, referring to the construction account, testified:

> "I have not seen anything to indicate but what the charges were proper enough. From all of these items * * * I find no charge in the construction account, but what appears on the face of the record to be legitimate, especially the more important items."

Mr. Wiggins further testified (Transcript, p. 1254):

> "In 1890 I had to go outside and get $20,000, and put it in the construction account. I believed it belonged there. In 1875 and 1876, the record shows that it was necessary to take up $2,396 feet of 6 inch

pipe, and lay from the works to 11th Street on O and 400 feet of 3 inch pipe on O Street, and relay that amount of iron pipe. The construction account of that year shows a total of $9,937.44, of which $1,001.00 is for pipe. The 1878 construction account was $1,656.06, and in the minutes of the meetings of the stockholders, held on January 15th of that year, there is shown that they built a retort house 30 x 50 and also built a brick lime house 12 x 20; a coal house 14 x 30 and a new coal gas works of the latest make made by Morris, Haskin & Company of sufficient capacity to make 40,000 feet of gas daily and I find no items in the construction account of 1878 covering that, but in 1876, I find that the Morris, Haskin Company was paid $2,417.00. The construction account for 1877 is $3,371.55, and I hardly suppose that the cost of a new coal gas works would be included in an item of that size. Under the same date in the same record they have constructed a lead of 9,800 feet of mains, and that has not been included in the construction account of 1877 of $3,371.55 and in the next year $1,656.06. I am unable to explain this. If an inventory is honestly taken, it controls over bookkeeping.

From Mr. Wiggins' Exhibit 158 (Transcript, p. 1896), it appears that at the close of 1889 there was charged to constuction, from 1873, on the books of the Company, $160,149.55, and that on October 31, 1900, from 1873, there was charged to construction account $407,620.46, and that at the close of 1906 there was charged to construction account $589,887.84.

Mr. Phillips, Secretary of the Company, testified, showing that the construction account did not carry expenditures for main maintenance, or the amount expended on reconstruction. He testified:

"If we were to put in a new water gas set and discard entirely the old set, the original cost of the old set would be deducted from the cost of the

> new set and the difference charged to construction (Transcript, p. 757). * * * We keep a separate account which covers additional equipment or items of a nature which would increase the value of the property. Nothing of a replacement nature or bettering expense or maintenance expense is charged in this account." (Transcript, p. 756.)

Mr. Homer Honeywell, Manager, in 1907, testified, referring to the construction account:

> "This $603,278 (shown in Exhibit E; Transcript, p. 253) includes all that has been paid out in constructing the gas plant, * * but it does not include replacing mains. We have an account called Main Maintenance in which that would be put. For instance, if you took up a 4-inch main worth 50c. a foot to us and laid down an 8-inch main that was worth $1 to us, we would charge construction with the difference—50c. only. * * If the old main was entirely worn out and had to be replaced by an entirely new one, it would all be charged to maintenance. No part would go to construction at all." (Transcript, p. 138.)

Mr. Honeywell testified further on this subject:

> "The item of $603,000 invested in the plant did not cover any investment necessary for supplies on hand, and what has been termed working capital" (Transcript, p. 142).

The evidence is conclusive to the effect that the construction account does not represent all of the money invested by the company in the plant, or the net difference resulting from the difference in cost between the original equipment and the plant equipment in service in 1907. The record shows that in the early days of the Company, according to Mr. Wiggins' testimony, a large part of the construction was charged off every year (Transcript, p. 210), and that for one year nothing had been entered in the construction account (Transcript, p. 1253).

The evidence of plant cost shown in the construction account is not to be confused with the Master's criticism of expert testimony. The construction account, we submit, is a witness as to values derived from costs, which is a better guide to a correct result than the Master's findings on the valuation for 1907. The Master indicated that he was confused because the testimony of expert witnesses was irreconcilable, and we submit, that in that situation the actual expenditures of the company, representing the cost of the property, would have been a safe guide for the Master to have followed.

The result of his valuation for 1907, we assume from his valuation of 1913, includes the items of working capital, going value and twelve and one-half per cent. overhead, in addition to the values of the physical properties. The Master allowed $60,000 working capital for 1913. Judge Munger allowed $50,000 working capital in 1907. If we assume that $50,000 working capital is included in the Master's $436,565, then, to get a comparison between the Master's figure and the construction account, $50,000 should be added to the $589,887.84 in the construction account, which would result in $639,-887.84. The Master's valuation is more than $200,000 below this figure, and if the twelve and one-half per cent. overhead and going value included in the Master's 1907 valuation are taken into account, it will be seen that the Master's figure for 1907 is practically $300,000 below the construction cost entered in the construction account. If the Master had made a valuation of the physical properties separate and apart from working capital, going value and overhead, we could have a definite basis in comparing his valuation on physical properties with the record cost of the physical properties, but, in the absence of such segregation of statement from the Master, we can only reach a presumption based upon assumptions, as to how much of his total

figure represents physical property and how much represests intangible property.

The evidence here shows that in 1913, there was approximately $767,000 of bonds of the Company and $500,000 of three-year collateral trust notes outstanding, issued under authority and by order of the Railway Commission of the State of Nebraska. These obligations were secured by a mortgage upon the combined gas and electric properties of the Company, and the evidence shows that the electric properties of the Company were of a value between $500,000 and $600,000. The Company would be expected to put out securities covering the cost of new construction, and if the investment disclosed by the construction account is evidenced by the bonds and notes of the Company, then it would follow that before the investment cost was depreciated, some good reason should exist for its depreciation, because it would not only deprive the Company of the values in its properties, but it would also involve the impairment of its securities. The Court, in considering the fair rate of return upon the value of the Company's properties under rate legislation, considers of prime importance, that the rate should be sufficient to induce investments in the Company covering extensions and betterments of the property. In that situation, if the construction account shows the cost of the extensions and betterments, that amount should not be depreciated without good and substantial reasons. The City offered no evidence impeaching the construction account, but, on the other hand, caused an exhibit to be prepared by Mr. Wiggins showing the construction account, and offered the exhibit in evidence, so that it stands in this record as the evidence offered on behalf of the City.

Judge Munger, upon the former trial of this case, found the present value of the properties of the company, as of January 1, 1907, to be $516,073.59, after

deducting $49,688.17 for accrued depreciation. To this value, Judge Munger added $50,000 for working capital, reaching a total value of $566,073.59. The Company appealed from the judgment of the Court, claiming that the Court at that time had omitted certain properties and values which should have been included, as shown by the opinion of this Court, page 359:

| | |
|---|---|
| Water gas apparatus, item of steam boiler... | $2,225.00 |
| Real estate and buildings—Reduction of real estate ..... | 3,200.00 |
| Reduction of buildings and fixtures..... | 12,643.00 |
| Gas meter connections, reduced..... | 6,780.00 |
| Working capital, reduced..... | 9,146.88 |
| Organization expenses, reduced..... | 21,950.00 |
| Engineering (consequent on reduction of totals) ..... | 1,339.78 |
| Contingent or overhead charges reduced.... | 22,884.00 |
| Interest during construction, disallowed..... | 39,050.00 |
| Cost of obtaining money, disallowed..... | 149,512.00 |
| Going value and franchise, disallowed..... | 100,000.00 |

The Court, in the course of the opinion, page 358, says:

> "The valuation fixed by the Court is the main point of attack. That the company is entitled to a fair return upon the value of the property at the time of the inquiry is the rule."

And, further quoting:

> "Upon all of these questions of valuation and of operating expenses there is much evidence, and much of it conflicting. The findings of the Court, as before stated, are of too comprehensive a character to be of much help in dealing with the details which are embraced."

And further, page 361:

> "This case is full of difficult and grave questions.

> Such conclusions as to facts as are found in the Court's opinion are not helpful when, as here, errors are assigned which open up substantially the whole case."

It is clear from the opinion of the Court that the Company upon the former appeal was complaining of the valuation fixed by Judge Munger, who had excluded certain items of property and certain elements of value, and the Company was insisting that those items and elements of value should be added.

The Master in this case included going value, which Judge Munger excluded, and reached a valuation with this element of value included, more than $100,000 below the valuation fixed by Judge Munger. The opinion of this Court in the former hearing discloses that the City contended that Judge Munger's valuation was excessive as to two items, namely, the item of $107,000 for gas services; and the item of $50,000 for working capital (Opinion, p. 360).

Judge Munger, in valuing the property, gave a definite value for the different items of property entering into his total valuation, and gave the replacement cost and the amount of depreciation resulting in his depreciated value. The Master, in this case, gives the one figure, depreciated value. The Court indicated in the opinion reviewing Judge Munger's findings, that they were not sufficiently definite and in detail to enable the Court to review errors assigned against them, without going into the whole record. If that was the situation with respect to Judge Munger's findings and valuation of 1907, what is to be said about the Master's findings for 1907, which give the one figure only, depreciated value, and leaves the Court in the dark as to how much of that amount represents the value of the physical properties, and how much represents working capital or the intangible property, and how much the Master

depreciated the physical property to reach that value. When it is shown, as here, that the value reached by the Master, including working capital and going value, is approximately $200,000 below the naked cost of the physical properties, as shown by the records of the Company, that valuation, in our judgment, should not be allowed to stand. It works a serious and grave injustice to the Company and to those who have invested their money in the Company's securities and properties.

The Master not only had before him the findings of Judge Munger as to the value of the Company's property in 1907, but he had the testimony of Mr. Malone, who was the Company's witness who inventoried and valued the property as of that date, showing a replacement cost of $904,000, without including therein anything for going value or franchise. The record shows that Mr. Malone inspected and examined the property and inventoried it in 1907, and that he was a competent witness. The City attacked his valuation at the two points indicated in the Court's opinion in this case. The Master found a value of approximately $500,000 below the value fixed by Mr. Malone.

After this case was reversed and referred to the Special Master, further testimony was taken, and a complete detailed inventory of the property was made, and a valuation arrived at as of January 1, 1913. Mr. Lea valued the property for the Company as of that date, and his valuation is corroborated by the records of the company, showing the cost of the things which he valued, and by the testimony of competent witnesses, among others, George L. Campen, former City Engineer, who valued the distribution system, and whose competency was not questioned; Mr. Steinmueller, who represented the Western Gas Construction Company, the concern that furnished a large portion of the gas equipment; and by contractors and

builders who had constructed the buildings upon the property. Mr. Lea's valuation for 1907 was derived from his valuation for 1913, and showed a reproduction or replacement cost as of January 1, 1907, of $906,141, and the present value of $784,682.

The City offered testimony from a witness who derived a value for 1907 from his figures and valuation for 1913. This witness' competency was challenged and assailed by the Company, and the evidence in this case shows that he was not a competent witness and nothing more than a student of statistics. In this situation and with this state of the record, the valuation of the Master standing against the construction account, showing in part the investment of the company in its properties, and against the valuation fixed by Judge Munger upon the former trial, and the valuation fixed by the Company's witnesses upon this trial, who were competent to testify, if so clearly contrary to the evidence, that it cannot be justified or allowed to stand.

## VI.

**The Master's valuation of the Company's properties, as of January 1, 1913, is unsupported by the evidence, and is clearly wrong.**

The Master found the present value of the Company's properties, as of that date, to be $676,565, which includes $60,000 for working capital and $40,000 for going value, reducing his present value of the physical properties to $576,565.

The construction account of the Company showed that the Company had invested in its physical properties, excluding working capital, going value, and twelve and one-half per cent. overhead used by the

Master, the sum of $784,307.49, which leaves the Master's present value of physical properties $207,742.49 below the investment cost to the Company of such properties. There should be added to the $784,307.49, shown in the construction account, working capital, overhead and going value, which would place the investment cost of the properties, with these elements added, at approximately one million dollars. If this property is depreciated, in accordance with Judge Munger's finding upon the former hearing, in the amount of ten per cent., it would still leave a present value of $900,000.

Mr. Wiggins, testifying for the City, said that the net amount charged to construction was $784,307.49, after deducting all credits (Transcript, p. 1255).

Mr. Wiggins, when called in 1912 by the City, further testified with reference to his exhibit, showing the amount entered in the construction account between 1907 and 1912:

> "In checking over the construction account the second time, I have checked back my own account and have found certain minor corrections which I have noted. Subsequent to 1907, I checked the large items in the construction account against the vouchers of the Company, and found it to be correct as entered in the books" (Transcript, p. 1253).

In the opinion of this Court in the Des Moines case, reported in 238 U. S., 153, it was disclosed that the value, fixed by the Master and sustained by this Court, of the physical properties was $2,240,928. The Master, in the Des Moines case, found that the going value, in addition to the value of the physical properties of the company, was $300,000. The valuation of the physical properties in the Des Moines case was not questioned or challenged in this Court by the City of Des Moines, but was accepted as a fair valuation of that property upon the appeal to this Court. The record in the Des

Moines case shows that it was a city of 98,000 people, and that the output of the plant was approximately 550,000 M cubic feet of gas per annum, whereas, Lincoln is a city, according to the record in this case, of 44,000 people, and with a plant output of 227,000 M cubic feet per annum in 1912. A valuation for the Lincoln plant of a million dollars in 1912, would compare normally with a valuation of two and one-quarter millions for the Des Moines plant in the same year; in other words, although the City of Lincoln is approximately half as large as the City of Des Moines, and the gas output of the Lincoln plant is approximately one-half of the output of the Des Moisnes plant, the Master's valuation in the Lincoln case was only one-quarter of the valuation of the Master in the Des Moines case.

Mr. Lea's Exhibit (Transcript, p. 2063) shows the reproduction cost of the Company's properties, at the close of 1912, to be $1,258,461, and the present value of $1,090,913. This valuation by Mr. Lea is corroborated and sustained by the Company's records showing the cost of extensions and equipment between 1907 and 1912, for which contracts were produced and vouchers showing the amount paid. In Mr. Lea's figure of present value is included $225,000 for going value, as computed and determined by Mr. Lea, his computation being shown in detail in Exhibit 7, Subdivision K (Transcript, p. 1353).

In Subdivision IV of this brief, we have considered and discussed the reduction made by the Master in the going value of this property, and have pointed out, as we believe, the error made by the Master in reducing the amount of the going value from the amount shown in the evidence to the figure of $140,000, and the further error in deducting $100,000 of the $140,000 from the value of the properties.

In the Master's valuation as of January 1, 1913, while he assumed to value the property by determining the net construction cost, in the first instance, to which twelve and one-half per cent. overhead was to be added, as we understand his report, in reaching the replacement cost, and from the replacement cost he deducted the accrued depreciation in reaching the present value. In his findings, however, in dealing with the properties as grouped in his report for the purpose of valuation, namely, real estate, buildings, works equipment and distribution system, he omits from his report and findings some one of the factors used by him evidently in reaching his value; so that it is difficult, if not impossible, to check out his present value from the assumed basis employed by him. With respect to buildings, he does not give (1) the net construction cost of any of the buildings; (2) nor the amount or rate of annual depreciation upon any of the buildings; (3) nor the age or assumed life of the buildings. The amount which the Master depreciated any building in order to reach his value, or the rate of depreciation, cannot be determined from his report. In this situation, in taking into account the testimony which is offered on behalf of the City and the Company, covering: (1) the cost of the buildings without overhead expense, or the net construction cost; (2) the reproduction cost, or the cost plus the overhead; (3) the age and assumed life of the buildings, each separately; (4) the accrued depreciation and the annual depreciation resulting in the present value, the testimony was complete, but the findings of the Master were incomplete on the necessary elements to be considered in the valuation.

With respect to works equipment, there were 73 separate items entering into this subdivision, and each of these items was valued by both the Company and

the City, giving the net construction cost, reproduction cost and present value, age, assumed life and rate of depreciation. The Master gave the reproduction cost and present value only of the combined 73 items, and as to the separate items, gave only the present value; so that from the Master's findings, in order to check out his valuation against the evidence and against the necessary factors to be considered in reviewing his findings, we find omitted: (1) net construction cost for each of the items; (2) reproduction cost; (3) accrued depreciation; (4) age and assumed life; (5) rate of depreciation.

With respect to the distribution system, the Master gave the total net construction cost and the present value, but did not give (1) the present value or reproduction cost of the properties going to make up the distribution system, or any of the subdivisions; (2) the accrued depreciation; (3) or the age or assumed life of any part or portion of the distribution system.

We submit that the directions of this Court for specific findings were ignored by the Master in the valuation as of January 1, 1913, and were completely ignored in his valuation of 1907, and all to the disadvantage of the Company in attempting to point out the errors of the Master in his valuations for lack of detail and information as to how his figures were reached.

The Company, in Exhibit 7, Subdivision (8) (Transcript, p. 1304), showed the age and assumed life, and the depreciation, computed on a straight-line basis, and on a sinking fund basis, for each piece of property involved in the valuation.

The Company, also, in Exhibit 425, Subdivision N (Transcript, p. 1384), submitted in detail the amount expended by the Company for repairs and renewals on each part of the Company's property, for each of the years from 1903 to 1913, inclusive. This detailed information was furnished by the Company in order that

the Master might comply with the orders and directions of this Court in making a valuation of the properties, and to enable the Court to check out and determine the accuracy of the valuations.

The net earnings of the Company for 1912, as shown by Mr. Lea at the $1.00 rate, would have been $21,817.73. Mr. Lea also shows the gross and net earnings of the Company for 1913 (Transcript, p. 2064), and in comparison with the earnings for 1912, are as follows:

| | Full year, 1912. | Full year, 1913. |
|---|---|---|
| Gross Earnings for Gas Dep't. as Reported | $282,162.11 | $273,595.52 |
| Deduct Receipts from Gas Sales Outside Lincoln | 8,986.18 | 8,471.35 |
| Corrected Gross Earnings Gas Dep't. | $273.175.93 | $265.124.17 |
| Total Operating Expenses as Reported | $175,573.49 | $183,436.77 |
| Deduct Output Cost Gas Sold Outside Lincoln | 1,873.62 | 2,471.92 |
| | $173,689.87 | $180,964.85 |
| Add for Excessive Residual Credits as Reported | 2,722.23 | |
| Add for Depreciation (minimum shown by sinking fund calculation) | 20,865.03 | 20,865.03 |
| Corrected Operating Expenses Gas Dep't. | $197,277.13 | $201,829.88 |
| Corrected Net Earnings Gas Dep't. | $75,898.80 | $63,294.29 |

If the rate was reduced to $1.00, it would result in a reduction of one-sixth of the gross receipts, or a reduction of $44,187.36 from the gross earnings of $265,124.17 for 1913, leaving gross earnings for 1913 at $220,936.81, with operating expenses of $201,829.88, leaving a net balance of $19,106.93 at the $1.00 rate. Deducting the 3% occupation tax on gross earnings at the $1.00 rate or $6,628.43, leaves $12,478.50 of net earnings for the year 1913.

The result of this calculation illustrates the conclusions of the Master's findings upon the Company's continued operation. According to his own figures, the net earnings of the Company, in 1907, were $22,349 (Transcript, p. 53), which he finds would be a return of 5.12% on his then estimated value of the company's properties; and, as we have shown, it would be a return of 4.5% if his mathematical error were corrected, and a return of 3.7% if $100,000 of going value, which he found existed but deducted for reasons stated, were added to his 1907 valuation; or 2.8% if the values shown by the company were accepted. As against these net earnings in 1907, we have shown how the gross earnings fell off in the year 1913, as compared with the year 1912, and that the net earnings of the Company in 1913, according to the Company's figures, were but $12,478.50, which, on the basis of the Master's 1912 valuation, is but a return of 1.8%;. and on the basis of the Company's 1912 valuation, is but a return of 1.01%.

The Master endeavors to justify his conclusion by certain arbitrary eliminations from the expense account of the Company, which represented the Company's actual disbursements in the year 1912. The propriety of these eliminations we will now proceed to discuss:

## VII.

### 1912 Operating Expenses.

It will be noted in the Master's criticism of the expenses of the Company for 1912, that he eliminated an expenditure actually incurred by the company of more than $7,000 in the new-business department, on the assumption that the Company was not justified in making this expenditure, in order to either hold the business that it had, in face of competition by the electric companies, or to acquire new business. The expense for this item was $19,692.64, in 1912. In 1904, as already indicated, the expense for this department was more than $16,000. In 1913, the Company reduced this expense for this department to $10,399.90 (Transcript, p. 2062), and the gross sales of the Company for 1913 dropped from 227,297,000 cubic feet in 1912 to 219,249,900 cubic feet, and the gross earnings from gas sales fell off from $273,175.93 to $265,124.17, and the net earnings from $75,898.80 to $63,294.29, at the $1.20 rate (Transcript, p. 2062). If the Company, by the expenditure of money to hold its business, had not been able to increase its business, but had simply been able to hold what it had, in the face of competition from the electric service, which had practically driven the gas department from the lighting field, it would be no justification for the Court in eliminating the expenditure, or any part of it, if the Court were free to substitute its judgment as to how much should be expended by the company to hold its business, or to extend its business. The same rule would apply to any expenditures of the Company, and would result in a disallowance of money expended for equipment or extensions, where the Court might feel that the expenditure was not wisely made. We submit, where a company acting in good faith and under the direction of competent management, as indi-

cated in this case, that this Company was being managed by a skilled and competent manager, that the judgment in the expenditure of money, either for equipment or for holding or extending its business, should be protected and should not be eliminated from consideration without substantial and serious reasons for it.

The Master injected in his report a statement (entirely without warrant (as the record shows), which clearly implies that the Company disbursed large sums of money in new business, for the purpose of defeating this gas case Ordinance; that this implication of the Master's was quite without justification, is shown by the evidence in the record. The Company spent in its new-business department, between the years 1904 and 1913, the following sums of money:

| | |
|---|---|
| 1904 | $16,400.65 |
| 1905 | 15,919.73 |
| 1906 | 13,432.41 |
| 1907 | 13,394.04 |
| 1908 | 11,634.96 |
| 1909 | 14,019.36 |
| 1910 | 16,152.75 |
| 1911 | 18,985.52 |
| 1912 | 19,692.64 |

(Transcript, p. 1382)

| | |
|---|---|
| 1913 | 10,399.90 |

(Transcript, p. 2062.)

A brief analysis of this table will show how wide of the mark the Master was in his implication above referred to. It appears that the Company spent more money in 1904 than it did in any subsequent year until 1911. And yet there was no rate suit pending in 1904, the Rate Ordinance having been passed in November, 1906. During the years 1906 and 1908 the expenditures in the new-business department actually decreased from $13,432.41 to $11,634.96, during which years this rate suit was actually in litigation. Furthermore, it appears

that in 1908, while this suit was then in litigation, that the Company spent less money in its new-business department than in any year since the institution of the new-business department, except 1903, the first year of its institution. Also, there was expended in 1904, two years prior to the passage of the Rate Ordinance, more money than in any of the years in which the new-business department was in existence, except 1911 and 1912. And we have already shown the result of the decrease in 1913, as compared with 1912, the result being a falling off in sales and earnings. Furthermore, the City of Lincoln established an electric lighting plant in about 1907, and subsequent to 1911 entered the the commercial field, the result of which was that the new-business department had to bear the burden of the advertising necessitated by this competition. The unfairness created by this situation can be seen at a glance: The City is competing with a gas company in the lighting business, with its ability to pay its expenses out of general taxes, and at the same time in this rate case against the Company it objects to the Company's cost of advertisement, necessitated by the competition which the City had created.

In view of the above facts, can it be said that there is any justification for the Master's imputation to the effect that the Company deliberately dissipated its earnings in order to win this rate case? The serious effect of this trimming of operating expenses on the part of the Master can be shown by a simple computation. If we take the Master's figure of a 6% rate of return, and make a calculation on a 6% basis, it will be seen that every dollar which the Master eliminates from the Company's operating expenses is equivalent to eliminating $16 2/3 from the valuation of the Company's properties, so that an elimination of $7,692 from operating expenses is equivalent to reducing the value of the Company's properties approximately $120,000.

If this item of $7,692 had been permitted to stand in the operating expenses of the Company where it properly belongs, then the net income of the Company for 1912, even on the valuation as found by the Master, with all the other adjustments in the operating expenses which the Master had made, would be less than 6%.

Another mathematical error which the Master made, this time in his 1912 figures, is the deduction of the salary of the Chairman of the Board of Directors ($3,000) and the retainer of New York counsel ($600). He deducted this entire amount from the operating expenses of the gas department of the Company, whereas, these salaries were apportioned between the gas and electric departments, and, if there was any deduction to be made at all, it only should have included that proportion of these salaries as applied to the gas end of he Company's business. The Master apportioned such of the operating expenses as were common to both the gas and electric department of the Company as follows: 73% to the gas department and 27% to the electric department. On this basis, intead of deducting $3,600 for these two salaries, as aforesaid, he should only have deducted approximately, $2,600, or $1,000 less. If we deduct this additional item of $1,000 from the 1912 net revenue of the Company, as found by the Master, it would reduce said net revenue to approximately $38,000. On this basis, the rate of return which the Company would have earned in 1912, at the $1.00 rate, on the Master's own findings, as adjusted, would only have been 5.6%, instead of 6.9%, as he finds. And if we add to the Master's 1912 valuation the $100,000 of going value, which he found existed but refused to allow, the result, at the rate of return earned by the Gas Company in 1912, on the Master's own figures, as adjusted, would only be, at the $1.00 rate, 4.9%.

In conclusion of the matters heretofore discussed, we submit herewith the results sought to be accomplished

by the City, and which will, in fact, be secured if the decision in this case is affirmed:

1. The value of the company's properties, as of January 1, 1913, will be definitely fixed at $676,565.

2. The City will enforce refunds equal to the difference between the $1.00 rate and the $1.20 rate, for the period between January 1, 1907, and May 1, 1915. The amount of these claimed refunds, with interest to the time of the hearing before Judge Page Morris (approximately July 1, 1915), is as follows:

| Year | Principal | | Int. at 7% |
|---|---|---|---|
| 1907 | 35,725.20 | 8 yrs. | 20,005.11 |
| 1908 | 38,819.32 | 7 " | 19,021.46 |
| 1909 | 40,648.72 | 6 " | 17,072.46 |
| 1910 | 41,604.62 | 5 " | 14,561.61 |
| 1911 | 44,445.62 | 4 " | 12,444.77 |
| 1912 | 45,459.40 | 3 " | 9,546.48 |
| 1913 | 44,047.54 | 2 " | 6,166.66 |
| 1914 | 46,702.28 | 1 " | 3,269.16 |
| 5 mos. 1915 | 18,916.64 | | |
| | 356,369.34 | | 102,087.71 |
| | | | 356,369.34 |
| | | Total | $458,457.05 |
| Interest on 1915 refund at 2% | | | 378.33 |
| Interest on total principle from July 1st, 1915, to January 1st, 1916 (3½%) | | | 12,472.93 |
| Total principle and interest to January 1st, 1916, | | | 471,308.31 |
| Interest for years 1916 and 1917 (approximately $25,000 per year) | | | 50,000.00 |
| | | | $521,308.31 |

3. The City will proceed with its attempt to collect its occupation taxes, which, for the years 1910 to 1913, inclusive, with interest and penalties through the current year, now amount to $40,846. This figure does not include any claimed occupation taxes for the years 1914 to 1917, inclusive, and is attempted to be levied irrespective of general taxes, which, in 1912, as the record shows, were over $15,000 per annum.

4. The City will proceed, with its municipal electric plant, to compete with the company in the lighting business, wherein the City levies a three per cent. occupation tax on the electric business of the company, and is free from that tax in its own service.

5. The City will proceed to press to judgment its suit to oust the company from the streets and public grounds of the City of Lincoln.

6. The City will then be in a position to push its plans for a municipal gas plant, and to that end, to force this company into such a position that the City can acquire its plant without compensation.

We submit that this array of facts and conditions, together with the established proof that the company never paid dividends, but used all its earnings in paying bond interest and operating expenses, and in making betterments, improvements and extensions to its property, demonstrates the utter confiscatory character of the ordinance in question.

## LINCOLN GAS & ELECTRIC LIGHT COMPANY v. THE CITY OF LINCOLN.

### TABULATIONS SHOWING MASTER'S MATHEMATICAL ERROR IN DETERMINING COMPANY'S 1907 VALUATION.

### I.

(1)

| | |
|---|---|
| Master's 1913 Valuation | $676,565 |
| Less Values added between 1907 and 1913 | 240,000 |
| 1907 Value found by Master | $436,565 |

(2)

| | |
|---|---|
| Master's 1913 Valuation | $676,565 |
| Less Values added between 1907 and 1913 | 240,000 |
| 1907 Value found by Master | $436,565 |
| Depreciation which was going on in period intervening between 1907 and 1913, at $10,000 per year, as found by Master | 60,000 |
| Correct value, according to Master's figures, which he should have shown, instead of value in Table I | $496,565 |

In calculating values from 1913 back to 1907, the Master (after deducting the values added in the intervening period) should have built up the 1913 value at the rate of $10,000 a year, which was the rate he found the property to be depreciating annually in 1907.

### II.

If we use the Master's 1907 valuation of $436,565 with his 1907 annual depreciation of $10,000, the result is not in accordance with the Master's own 1913 valuation.

| 1907 | 1908 | 1909 | 1910 | 1911 | 1912 | 1913 |
|---|---|---|---|---|---|---|
| 436,565 | 426,565 | 416,565 | 406,565 | 396,565 | 386,565 | 376,565 |

| | |
|---|---|
| All values, tangible and intangible, added to plant between January 1, 1907, and January 1, 1913, as found by Master | 240,000 |
| Total | $616,565 |

This result illustrates the Master's error, because his 1913 valuation of $676,565 could not be arrived at if the 1907 valuation were only $436,565, with his annual depreciation of $10,000.

### III.

If we correct the Master's mathematical error, which brings his 1907 valuation up to $496,565, and use his 1907 depreciation of $10,000 a year, the result will be the precise figure of the Master's 1913 valuation, to wit, $676,565.

| 1907 | 1908 | 1909 | 1910 | 1911 | 1912 | 1913 |
|---|---|---|---|---|---|---|
| 496,565 | 486,565 | 476,565 | 466,565 | 456,565 | 446,565 | 436,565 |

| | |
|---|---|
| All values, tangible and intangible, added to plant between January 1, 1907, and January 1, 1913, as found by Master | 240,000 |
| Master's 1913 Valuation | $676,565 |

This shows that in order to arrive at Master's 1913 valuation, with the rate of depreciation in 1907, as fixed by Master, at $10,000, he should have found the value of the Company's properties in 1907 to be $496,565.

VOL. II.

SUPREME COURT OF THE UNITED STATES.

| | |
|---|---|
| LINCOLN GAS & ELECTRIC LIGHT COMPANY, Appellant, *v.* THE CITY OF LINCOLN, *et al.*, Appellees. | October Term, 1917. No. 300. |

**Discussion of the Evidence.**

In view of the fact that this Court, in its determination of the prior appeal of this case, remanded this cause to the Court below, to refer the case to a Master to make a full and complete report of his findings, based upon all the testimony which either side might present, and in view of the further fact that the Master has notably failed to do this, and this Court's instructions in that respect have been completely disregarded, we deem it not only useful, but imperative, to take up the various findings of the Master separately, and to analyze them in the light of the testimony which was introduced in respect of the various items of valuation, operating expenses and earnings. For this reason, we have prepared in this volume such an analysis, and here submit it for the consideration of this Court.

**Overhead Charges.**

The Master recognized the propriety of adding an amount for overhead charges to the net construction

119

cost of the Company's property in order to determine the reproduction value of said property.

In determining this amount, the Master said in his report, under the heading "Overhead Charges":

> "Just what it should be, is the question about which there is much difference of opinion among engineers, courts and commissions. In this case, Mr. Lea puts it at 16 per cent and Mr. A. D. Adams at 7 per cent. The matter is not governed by any inflexible rule, but it is to be determined in every case by the exercise of good sense and sound discretion. The amount should be sufficient rather than liberal, especially where liberality might result in blotting out legislation, which, in the regulation of rates, is only required to stop just short of confiscation." (Transcript, p. 37.)

We beg to disagree with this general statement of the Master. The amount of "overhead charge" is to be determined by another element as well as "the exercise of good sense and sound discretion." That other element is *engineering experience*. That is, the determination must be based upon the experience of engineers skilled in the art and trade of constructing gas properties. And although the experience of such engineers does not fix, with precise certainty, the amount to be allowed for overhead charges, still we submit that the experience of such engineers completely fails to justify the estimated amount finally fixed by the Master, through the exercise, as he expresses it, of "good sense and sound discretion."

He says further:

> "My judgment upon the matter is that an allowance of 12½ per cent on the total net construction cost of the physical property, excepting real estate and working capital, is sufficient to cover all overhead expenses, including engineering, superintendence, legal expenses, taxes, interest during construc-

tion, omissions and contingencies, casualty liability and whatever else is usually classified under this caption. This is necessarily an estimate based almost entirely upon expert testimony. No accounts were kept and no books, vouchers or other evidence produced showing with even approximate accuracy what expenditures were actually made and properly chargeable to this account. The value of the property has substantially increased by addition made to it in recent years, but the only means of ascertaining what the overhead charges on account of such additions were, is by the use of a more or less reliable hypothesis. Courts and commissions differ widely upon this question, and *while it may be that the percentage here allowed is not enough, the evidence will not convince me that it ought to be more.*" (Transcript, p. 38.)

Why does the Master choose 12½ per cent for overhead charges? It is impossible to tell from his report. He maintains a profound silence with regard thereto. He states Mr. Lea's estimate as 16 per cent and Mr. Adams' as 7 per cent. What induced the Master to pick 12½ per cent is a matter purely of conjecture. He says that the "evidence does not convince me that it ought to be more." What evidence? Whose evidence? What evidence convinced the Master that it should be as much as 12½ per cent? He may know, but he fails to specify in his report.

At the outset it is apparent that the Master has fallen into error when he compares Mr. Lea's 16 per cent with Mr. Adams' 7 per cent. These percentage figures do not purport to cover the same thing. Mr. Lea went very fully into the items which made up his overhead charge estimate. His estimate is made up of two distinct groups, which the Master evidently has completely lost sight of. The first is the item of 16 per cent, which includes:

"Engineering and supervision ..... 6%
"Casualty liability ..... 2%
"Taxes and loss of interest during construction, 4%
"Omissions and contingencies ..... 4%

"Total ..... 16%"

(Transcript, p. 1303.)

This he adds to the net construction cost of all physical equipment except real estate and working capital.

In addition to this 16 per cent. Mr. Lea estimates a sum in dollars to cover organization and legal expenses. The amount is $33,000 (Exhibit "7A") which is made up of the following items:

| | |
|---|---|
| "Preliminary investigation ..... | $ 3,000.00 |
| "Preparing articles of incorporation, making and certifying abstracts, drawing and examining contracts and general retaining fee ..... | 7,500.00 |
| "Salaries of manager and clerical force during construction (2 years) ..... | 18,000.00 |
| "Incidental and traveling expenses (2 years) ..... | 2,500.00 |
| "Rent and Stationery ..... | 2,000.00 |
| "Total ..... | $33,000.00" |

(Transcript, p. 1300.)

This $33,000.00 for organization and legal expenses is approximately 3 per cent. of the valuation of the property as fixed by Mr. Lea, which, added to the 16 per cent. for engineering, etc., would make a total of 19 per cent. for overhead charges. Mr. A. D. Adams estimates 7 per cent as sufficient to cover all of the items included in both these groups (Transcript, p. 1131). It is evident, therefore, that the Master should have set the 7 per cent. estimate of Mr. A. D. Adams against the 19 per cent., as the total overhead estimate of Mr. Lea.

Either the Master, through error, set the 16 per cent. against the 7 per cent. or he did so deliberately to make it appear that he finally selected a figure (12½) which was nearer to Mr. Lea's than to Mr. Adams' estimate. Such, however, is not the fact, because Mr. Lea's total estimate for overhead was approximately 19 per cent., or, as he definitely states it, 16 per cent. for engineering, etc., and $33,000.00 additional for organization and legal expenses.

What the Master actually decided in regard to the items of organization and legal expenses, which makes up Mr. Lea's total of $33,000.00, is difficult to determine. He does not discuss that matter at all, except insofar as he determines that 12½ per cent. covers "overhead expenses, including engineering, superintendence, legal expenses, taxes, interest during construction, omissions and contingencies, casualty liability and *whatever else is usually classified under this caption.*"

To analyze Mr. Adams' estimate of 7 per cent. for overhead charges in a problem which we confess we are unable to solve. And apparently such was the case with Mr. A. D. Adams; for his testimony does not attempt to disclose any subdivision or application of any part of the 7 per cent. to any particular part of the engineering, legal or organization expenses. However, there was submitted by *counsel* for the City in the course of the argument a division of the 7 per cent. as follows:

> "For engineering and supervision, including investigations, drawing and making contracts, clerical work connected with construction, plans, specifications and full supervision, 5 per cent.; for interest paid or lost on money for construction or on construction accounts up to the time when each part of the plant goes into use, one year being the period for completion of construction, 1 per cent.; and for

all other general costs incident to construction, including law, rent, stationery, insurance, clerical services, taxes, incidentals and omissions, 1 per cent."

But it is worthy of note in determining the weight to be attached to Mr. A. D. Adams' figure that in the course of the cross examination, which extended over a period of one week, Mr. A. D. Adams was requested practically every day, by counsel for the Company, for a subdivision or analysis of the 7 per cent., and for a specification of the proportions thereof, assigned or set aside for organization and legal expenses, for engineering, for interest during construction, for taxes, for casualty liability and for omissions and contingencies. It is evident that the 7 per cent. could not be made to cover these items of expense or overhead charges, if any attempt to subdivide the total figure of 7 per cent. had been made.

Mr. Lea testified that 6 per cent. for engineering and supervision was the current price among competent engineers, where engineers are appointed for preparation of plans and specifications, the taking of competitive bids and placing the contract and overseeing the construction and passing on the fulfillment of the contract; that the organization and legal expense, involved a preliminary examination by the engineer for a determination of the feasibility of the project and a survey of ground available for the plant and laying out and determining the distribution system; that the engineering service involved in the organization and legal expense, and in the engineering expense involved drawings of all the buildings, a large part of the works equipment and the distribution system, and calculations as to the kind and size of the pipe, pressure, etc., all of which required a great deal of time, practice, skill and ability; that casualty liability covered the item of insurance protection against

liability on account of damage claims and otherwise during the course of construction, and particularly while the streets were open and the public subjected more or less to the hazard of accidents; that the item for taxes and loss of interest during construction contemplated that it would require fully three years to complete the construction of the plant, and that in ordinary practice one-half of the interest is allowed on the investment for the full period of construction; that it was customary in construction work of this character, as well as other construction work to allow for omissions and contingencies; that construction expenses usually exceed the original estimate and in detailed inventories there are usually omissions (Transcript, pp. 398-400).

The record discloses that Mr. Lea was competent to testify with respect to such items and was qualified from actual experience in the construction and management of gas properties.

Mr. L. E. Wettling testified with respect to these items of overhead and disclosed in his testimony his knowledge and familiarity with the practice of Public Service Commissions and valuation bodies in determining the propriety and amount of such items, and disclosed qualifications to testify with respect to them; that it had been his duty in the service of the Nebraska State Railway Commission to make a study of and become fully informed with respect to overhead charges in properties of the kind involved here. Mr. Wettling testified that the inventory of materials in the composite plant would not necessarily reflect the cost of construction; that it is not practically possible to show all the materials necessary to be purchased and actually in the completed plant on an inventory; that in the ordinary course there are variations usually for omissions; that it is not possible to avoid the loss of materials by

breakage, accident or otherwise in the construction of a complete plant; that contingencies usually cover the loss of material, breakage of material, unforeseen accidents, unforeseen difficulties met in construction; that an allowance of from 3 to 5 per cent. for contingencies would be reasonable. Mr. Wettling called attention to the inventory submitted by the Lincoln Telephone & Telegraph Company to the Railway Commission, wherein it was specifically shown that in spite of the greatest care in the taking of the inventory, errors of omissions exceeding 5 per cent. of the total value were found. He also called attention to like omissions in the inventories submitted to the Railway Commission by telephone companies from York and Johnson Counties. That casualty liability is considered as a separate and distinct item and is an expense necessarily incurred in the construction of a plant; that the rates for such insurance run from 1 per cent. to as high as 5 or 6 per cent., and in some cases as high as 10 per cent., on the payroll; that the cost here would run from 4 to 5 per cent. on the payroll, and assuming the labor cost would constitute practically one-half of the entire cost of the plant, would amount from 2 to 2½ per cent.; that it is necessary in the construction of a plant like this to employ engineering skill and other supervision as the work progresses, and that no gas plant of any magnitude is built without such assistance from engineers; that preliminary work is to be done in the matter of surveying the field, determining the best location for the plant itself, the best location for the distribution system and general outline which involves a study of population centers in the particular place and in other places, and requires engineers who have specialized in that particular utility; that for engineering and supervision taken together the expense would be from 5 to 8 per cent., depending upon the difficulties and length of time required. That interest during

construction is one of the necessary items of cost and legitimate capital charge in the construction of the plant and by most regulating bodies and engineers, and is calculated at 6 per cent. per annum for one-half of the period of construction; that Courts and Commissions and engineers recognize and allow for expenditures involved in the organization of the company, the expenditures for making estimates and preliminary investigation, for obtaining money, securing franchise and promoting the enterprise; that these expenditures are sometimes included with the so-called overhead charges or expenditures in the group along with engineering, supervision, contingencies and interest during construction; that such expenditures are appropriate and necessary and are a part of the capital contribution, and are as necessary in a well-conducted and carefully planned organization as purchase of the machinery itself; that ordinarily it is necessary for the promoter to establish an office at the beginning of the construction in the community where the enterprise is being carried on and to surround himself with the necessary help to generally supervise and look after the work of construction, and to see that the work is prosecuted under the plans laid out by him (Transcript, p. 797 *et seq.*).

E. C. Hurd testified with respect to the so-called overhead charges, and testified that for the past five years he had charge of the valuation of utility property in this State as chief engineer for the Nebraska State Railway Commission; that he had constructed several hundred mlies of steam railroad, 50 miles of electric railway, four separate electric light and power plants, two hydro-electric plants, and had taken part in the business management of electric property; had done work on gas plants, and particularly in an advisory capacity in the handling of property for bankers and brokers

interested in such properties; that he had valued the railroad properties and express company properties, in which was included almost every conceivable class of property; that he had valued the street railway property in the City of Lincoln and suburbs; that he was acquainted with the fundamental elements that enter into the cost of construction of utility plants; that the usual practice for engineers or valuators who are acquainted thoroughly with that class of work is to make an addition to the original fundamental item for omissions and contingencies. Mr. Hurd called attention to the fact of the inventory of the Missouri Pacific Railroad Company, submitted by the company as complete, and the omissions from such inventory discovered by his department in the valuing of the property of three important steel bridges; also to omission discovered by this department in checking the inventories submitted by the telephone Company, and stated that the Railroad Commission allowed 5 per cent. for contingencies and omissions. Mr. Hurd also called attention to the double tracking by the Union Pacific, where the materials were carefully checked and gone over as to the weight of rails and distance and the track fastenings, and where the conditions were ideal, but that upon rechecking after the work was completed, it was discovered that the amount of materials that were actually used was approximately 3 per cent. more than the amount found in the track.

With respect to the item of casualty liability, Mr. Hurd says that he never knew of an extensive construction that did not experience such an item; that the labor item in the construction of this plant would probably amount to from 1.8 per cent. of the total to 2 per cent. of the inventory value; that interest during construction is figured at 6 per cent. for one-half of the construction period, and that for the construction of a plant like this it would take something like two

and one-half years; that you might hurry the construction, but to do it on an economical and sensible basis would be cheaper in the long run; that hurried construction costs more than construction at a moderate rate, and that if you hurried your equipment and materials an additional charge would be made therefor; that it would be financial foolhardiness to erect the buildings all at once, with no respect to machinery, and then lay the mains all at once without respect to the possible consumer's situation; that to intelligently attack the proposition, as a whole, it would take about two and one-half years to successfully put in a plant and complete it in the most economical way; that a plant adroitly engineered should have as a general principle a greater efficiency value than a crudely constructed plant, and while the engineering cost might add somewhat to the capital at the beginning, such cost would afterward tend to reduce the operating expense; that the superintending factor is a larger one in the cost than the purely engineering (Transcript, p. 814 *et seq.*).

The testimony of Mr. Wettling and Mr. Hurd completely supports and confirms the testimony and estimates of Mr. Lea on his calculation of overhead charges. In many instances the figures given by Mr. Wettling and Mr. Hurd *exceed* the amounts designated by Mr. Lea for these items of expense.

It is not even contended by the City that Mr. Wettling and Mr. Hurd are not competent to speak as to these costs. Their qualifications are conceded. There are no men in this State better fitted from experience to testify as experts on the subject of costs than Mr. Wettling and Mr. Hurd. Mr. Lea's competency has already been stated.

As against the testimony of these three men, skilled and fully advised as they are, the City has introduced the testimony of one witness, Mr. A. D. Adams, whose

training as a gas or other engineer, and whose capacity for a full and fair statement of facts or opinions, we will hereafter discuss.

The clipping of approximately 12 per cent. on the overhead charges by A. D. Adams for the City at the very beginning of the valuation of the Company's property, is pursued consistently on each and every item of property possessed by this Company.

To demonstrate that the proposed 7 per cent does not represent a qualified honest judgment as to the cost for these items of overhead, we desire to call your Honors' attention to the amount allowed for such items of overhead by engineers and valuating boards and commissions, and to call your Honors' attention to the particular properties and the amounts allowed for such overhead and the amounts involved in such appraisements. The railroad properties of the state of Michigan were valued by Mortimer E. Cobley, Dean, of the engineering department of the University of Michigan, with his staff, and his valuation was approved by the Commission, and included an overhead charge on the railroad properties in that state of 21.2 per cent. The railroad properties of Minnesota were valued by Dwight C. Morgan, engineer for the Minnesota Railroad Commission, and his valuation was approved by the Commission and included for overheard charges 20.8 per cent. on the depreciated present value of the property. The railroad property of South Dakota was valued by Carl C. Witt, engineer for the Railroad Commission, and his valuation was approved, including overhead charges 16.3 per cent. on the depreciated present value. The railroad property of Wisconsin was valued by Prof-William D. Taylor, engineer for the Board, and his valuation was approved, including overhead charges in the amount of 16.5 per cent. on the depreciated value of the property. The surface railway properties in

the City of Chicago were appraised and valued for and under the direction of the City by Bion J. Arnold, Mortimer E. Cooley and A. B. DuPont, and there was allowed for overhead charges 21.7 per cent. on the inventory-reproduction cost. The Chicago gas plant was appraised and valued by the City for the purpose of rate regulation, and the amount allowed for overhead charges in the City's appraisal was 17 per cent. The Public Service Commission of Maryland, in appraising and valuing the Consolidated Gas, Electric Light & Power Company's property of Baltimore, allowed for overhead charges 21.39 per cent. of the physical properties, excluding land. The Validation Board of the State of Massachusetts valued and appraised the street railway properties in that state, and allowed for overhead charges 23 per cent. of the value of the physical property. The Public Utility Commission of New Jersey valued the Public Service Gas Company's property for rate making purposes, and in the valuation allowed for overhead charges 17.6 per cent. of the value of the physical properties. The Railway Commission of the State of Wisconsin, in October, 1913, prepared and submitted an estimate of the cost of municipal lighting plant for the City of Milwaukee, and in the estimate submitted fixed the overhead charges at 20.7 per cent. of the physical property, including land. The Nebraska State Railway Commission appraised and valued the Lincoln Telephone & Telegraph Company's property on June 26, 1913, in the matter of regulating rates and allowed for overhead charges 17.2 per cent. on the reproduction cost or 20.8 per cent. on the net construction cost of the physical property, including land. The Railway Commission of Michigan, on June 11, 1913, in appraising and determining the amount of overhead charges in the application of the Northern Michigan Power Company, and upon the report of

Prof. M. E. Cooley allowed for overhead charges 22.2 per cent. of the value of the physical property.

We present herewith the detailed statement of each of these cases and other cases where the overhead allowance was fixed, and which included the items involved in Mr. Lea's 16 per cent., and in the $33,000 for organization and legal expense and the items involved in A. D. Adams' 7 per cent.

The Royal Railway and Canal Commission of Great Britain, on January 13, 1913, passed upon the value of the National Telephone Company's property in Great Britain, which was being taken over by the English Government, and there appeared before the Commission in that proceeding the most distinguished engineers in England and in this country. The transaction was of such importance as to insure the greatest care and the highest skill. The government of Great Britain was represented in the proceeding by its Attorney General and Solicitor General. The opinion in the proceedings was written by Justice Lawrence and concurred in by Hardy and Woodhouse, of the Commission.

Pending the hearing an agreement was reached between the representatives of the government and the National Telephone Company covering the fundamental costs, or, as known in this proceeding, the net construction cost of the physical equipment and properties, aggregating in amount 12,294,813 pounds sterling. This left in controversy the amount of the overhead charges and the amount of depreciation. The Postmaster General, who had direct charge of the proceedings for the government, contended that 17.76 per cent. was sufficient for the overhead costs. The telephone company contended that a larger per cent. was necessary to cover the items of overhead, and the Royal Commission, after an extended hearing and an exhaustive inquiry into costs of that nature, decided that there should be allowed

for all items covering overhead an amount equal to 31.4 per cent. of the fundamental agreed cost, excluding lands and buildings, and amounting to 3,217,671 pounds sterling.

Of this 31.4 per cent the Commission allowed for items covering engineering, supervision and administration of head office, district and local, 14.55 per cent for the cost or ordering and storing material, 2.61 per cent for interest during construction 4.53 per cent, being a total for these particular items of 21.69 per cent. These items correspond to the items included in Mr. Lea's allowance of 16 per cent, under the heading "Engineering, etc." Other allowances made by the Royal Commission involved in overhead charges were as follows: For obtaining way leaves, .97 per cent (being in the nature of right-of-way); for rents, maintenance, way leave payments, insurance until plant is revenue earning, 1.95 per cent, making the total of the last items of 2.92 per cent.

In addition to the items aggregating 21.69 per cent, above referred to, these last items correspond closely to Mr. Lea's item of approximately 3 per cent, or $33,000 for organization, legal and other preliminary expense. It addition to the above items the Commission made further allowances for overhead costs as follows: For cost of obtaining subscriber's agreements, 1.46 per cent; for cost of obtaining money, 2.41 per cent, and for contractor's profit, 2.92 per cent.

The fundamental agreed costs upon which calculation was made for these allowances was 10,239,345 pounds sterling, and the allowances in pounds sterling and percentages were in detail as follows:

| | £ Sterling | Per cent |
|---|---|---|
| Head office engineering and administration | 560,806 | 5.48 |
| Local engineering and supervision | 660,732 | 6.46 |
| District and local administration | 267,759 | 2.61 |
| Ordering and storing material | 267,759 | 2.61 |
| Interest during construction | 463,426 | 4.53 |
| Total of above group of items, 2,220.482 equals 21.69 per cent. | | |
| Obtaining way leaves | 100,000 | .97 |
| Rents, maintenance, way leave payments and insurance | 200,000 | 1.95 |
| Obtaining subscribers' agreements | 150,000 | 1.46 |
| Cost of obtaining money | 247,189 | 2.41 |
| Contractor's profits | 300,000 | 2.92 |
| Total allowance | 3,217,671 | 31.40 |

Attention is called to the fact that in making these allowances for intangible values under the various heads the Royal Commission made deductions for depreciation on the items which it considered were subject thereto, and in making up its tabulation on which final judgment was allowed deduction was made from the fundamental agreed costs for depreciation and final judgment rendered for 12,515,264 pounds sterling. The total overhead and intangible charges included therein amounted to 3,217,671 pounds, and were 34.58 per cent of the depreciated value of the plant, including lands and buildings.

No doubt can exist in a transaction of this magnitude, involving the actual payment of approximately $61,000,000, that an allowance of nearly $16,000,000 for intangibles was not made without grave consideration for the actual necessity and propriety therefor.

The Commission had the benefit of the judgment and skill of the best engineers in reaching its conclusion and allowance of 21.69 per cent for the items practically corresponding with the items included in Mr. Lea's allowance of 16 per cent. It is not likely that, had the Royal Commission had the benefit of the judgment of

the City's expert in this case and a presentation of his 7 per cent for corresponding items that a different result would have been reached.

We do not feel that Mr. Lea's allowance of 16 per cent is subject to question or criticism in view of this high authority.

In this connection we also draw your Honors' attention to the fact that the Special Master in the Des Moines case allowed 15 per cent for the items directly corresponding to items covered by Mr. Lea's 16 per cent, and said:

> After careful consideration of the case, it is my conclusion that 15 per cent *in addition to the cost of organization* is a fair and just allowance therefor. There is undoubtedly no absolute rule for the amount that should be allowed and care should be taken that they should not be made excessive. They should be reckoned on an economical basis." * * * (182).

We wish to bring to the Court's attention certain actions and proceedings in which the calculation of overhead charges was treated and determined.

*In re Application Public Service Gas Co.*, Public Utility Commissioners of New Jersey, reported in Vol. 1, page 433, of the Published Report of that Commission, the matter of overhead charges was considered and passed upon by the Commission.

The Public Utility Commissioners of New Jersey appointed Forstall and Robinson as engineers for the Commission to value the gas property of the Public Service Gas Company in the matter of the application pending before that Commission.

In the opinion on the matter of overhead charges the Commission say (451):

"To the estimate of bare cost there must be added certain allowances for expenditures generally called overhead charges. Forstall's appraisal includes a total allowance of 15.54 per cent; Randolph allowed 20 per cent; Stone & Webster 20.5 per cent; Bartlett & Hayward 20.4 per cent; Humphreys & Miller allowed approximately 21.7 per cent. Forstall, however, stated that an additional 2 per cent ought to be added to his allowance. This is best explained by quoting from the letter transmitting his appraisal to this board. It runs as follows:

"'In these charges we cover only engineering and supervision, omissions, contingencies and interest during construction. We have taken engineering and supervision at 5 per cent, omissions, in view of the careful inventory at only 2 per cent, and contingencies at 2 per cent. The allowance for interest is based upon a period for and a progress of construction that would call for an average payment of interest at the rate of 6 per cent for one year on the total amount expended. It will be seen that the overhead charges applied do not include any organization expenses, liability for accidents and damages during construction nor taxes during construction. Without the value of the land and with the uncertainty as to the extent of the liability for accident under the existing law, we have not felt able to fix a definite percentage for the omitted items, but think they would amount to at least 2 per cent of the total before any overhead charges are applied.'

"Eleven per cent should, therefore, be added before computing the interest at 6 per cent, this making a total of 17.6 per cent.

"After due consideration we accept this figure as the fairest estimate for these allowances, and apply it in connection with each class of property" (452).

Nebraska State Railway Commission, on June 26, 1913, passed upon the application of the Lincoln Telephone and Telegraph Company for permission to establish temporary rates to be charged for service; application No. 1637.

In the decision in that case the Commission allowed 17.2 per cent for overhead on the gross reproduction cost which was the equivalent or 20.8 per cent of the net construction cost. The Commission in the decision says:

> "The taking of testimony developed considerable controversy with regard to the question of general expense items entering into the values, and this controversy was apparently founded on the suspicion that the amounts allowed for general expense, or so-called overhead items, was excessive. The commission is convinced that the amount of 17.2 per cent for general expenditures allowed by our engineers is conservative, particularly in view of the manner in which they have built up their unit cost. It is generally in line with the accepted percentages and theories of commissions and regulating bodies of other jurisdictions, many of which allow over 20 per cent for these items. In the case of the taking over of the telephones of the Kingdom by the Crown, the commissioners in Great Britain allowed for this item 26 per cent.
>
> "Various commissions, as well as many of the prominent engineers of the country, apply the general expenses in this way, others include or conceal such expenditures in the units of costs, thereby producing apparently smaller percentages for overhead expenses, and when so treated in a valuation there will be apparently no general charges whatever, In other cases part of the general expense are applied to the unit price and another part is set up as general expense, which thus makes it appear as though a lower ratio of general expense had been applied in the valuation. Thus in the case of Wisconsin, which during the hearing was quoted as allowing only 12 per cent, it is found that the commission does in fact allow as much as 15 per cent for the so-called overhead items, and that as much as 10 per cent in addition is first applied to the units, thus bringing the range of allowances, depending upon the particular utility under con-

sideration, from 19 to 25 per cent. We quote from an address delivered in Chicago, March 24, 1913, by Mr. Commissioner Halford Erickson:

"'As to overhead expenses, that is also a matter, I think, that is not quite understood. The Wisconsin Commission in the case of small utilities allows 12 per cent. In the case of large utilities where they have a great deal of difficult city work to do, crossing rivers and work of that kind which often involves considerable risk, we allow 15 per cent. That however, is the figure which is apparent, which is visible in determining the unit price upon which to compute the cost of the various items or elements. We nearly always allow 10 per cent for contractor's profit. This is an element which entered into the cost as a whole and is not given separately. However, if that were taken out of the unit prices where is appears, and added to the 12 per cent, that figure would be considerably increased. It might not add 10 per cent to that figure, but it probably would add 8 per cent or 7 per cent, sometimes 9 per cent, so that the overhead expense used by us is considerably higher than 12 per cent. We have explained that on several occasions, but it appears perhaps that our practice is not quite understood.'"

*In re Application of the Northern Michigan Power Co.* for authority to issue stocks and bonds, reported in the Railway Commission Reports of Michigan for the year 1913, decided June 11, 1913, D. 626.

In this case application was made to the Railway Commission of Michigan for authority to issue stocks and bonds. The Commission referred the engineering matters involved in the application to Prof. M. E. Cooley, Dean of the engineering department of the University of Michigan, and to Profs: Riggs and Anderson. Profs. Riggs, Cooley and Anderson made a report finding the value of the tangible property and providing for the overhead charges for which an allowance of 22 per

cent of the tangible value was made. The Railway Commission, in passing upon this report and upon the application of the opinion, says:

> "For the purpose of checking the estimates for the construction of the physical property the Commission has submitted the appellants' petitions and engineering data to Profs. Cooley, Riggs and Anderson of the University of Michigan, who have submitted a comprehensive report which has been added to the record. The computations made by these gentlemen are based upon a thorough examination of the plant, maps, and field notes of petitioning Company, as well as on such data obtained by these gentlemen in the supervision of work of like character in other portions of this and adjacent territory. The summary of the report as respects physical value shows the following:

| | | |
|---|---|---|
| "1. | Land and flowage rights (assumed as valued by promoters of the enterprise | $2,565,000 |
| "2. | Construction based upon independent estimate | 4,275,701 |
| "3. | Overhead charges, including contingencies, engineering, organization, interest during construction, working capital, stores and supplies | 1,520,396 |
| | "Total overhead charges | 22.2 per cent." |

In *Bachrach* v. *Consolidated Gas, Electric Light and Power Company of Baltimore*, reported in the Published Volume Public Service Commission of Maryland, vol. 4, page 39, decided in 1913, the Commission had under consideration the matter of overhead charges in valuing the Consolidated Gas Company's property.

The Commission in the opinion says:

> "The item for preliminary organization includes: Time and expense in securing organization; (2) Cost of obtaining capital; (3) Interest on and during construction; (4) Cost of Consolidated Gas and Electric divisions:
>
> "For the gas division the allowance is $1,949,748 or 12 per cent. of the total value; 18.36 per cent. of the land and structures and 21.22 per cent. of the

structures alone. In the electric division the allowance is $1,434,672 or 12.68 per cent. of the total value. For the two divisions the allowance is $3,284,442 or 12.35 per cent. of the total value; 19 per cent. of the land and structures and 21.39 per cent. of the structures alone.

"The allowance for overhead expenses as above indicated was $3,384,422 or 21.39 per cent, of the value of the structures alone" (50-52).

*Des Moines Water Co.* v. *City of Des Moines.*

| | Amount | Percent of Inventory Cost |
|---|---|---|
| 1. Engineering, superintendence, contingencies, general and legal exp. | $116,928 | 8 |
| 2. Interest during constr. | 116,928 | 8 |
| | $233,856 | 16 |

Whitten, sec. 246, p. 221.

Massachusetts Street Railway Valuation by Validation Board:

| | |
|---|---|
| 1. Engineering 5 per cent. of physical cost of reproduction | 5 |
| 2. Contingencies 5 per cent. of physical cost of reproduction | 5 |
| 3. Legal and general expenses 3 per cent. of physical cost of rep. | 3 |
| 4. Interest 6 per cent. of physical cost of reproduction plus the above, or about 7 per cent. on the physical cost of reproduc. | 7 |
| 5. Commissions for marketing securities 3 per cent. of physical cost of reproduction | 3 |
| Making total of about 23 per cent. of physical cost of reproduc. | 23 |

Whitten, sec. 248, p. 223.

**Massachusetts Validation Board, 1911, *in re Appraisal of N. Y., N. H. & H. R. R. Co.:***

| | |
|---|---|
| 1. Engineering 5 per cent. on total cost; excepting the land and equipment | 5 |
| 2. Contingencies; 5 per cent. on total cost, excepting land and equipment | 5 |
| 3. Legal expense—1 per cent. on total, excepting land and equip. | 1 |
| 4. General expenses; 1 per cent. on the total, excepting land and equipment and 3 per cent. on cost of land | 1.2 |
| 5. Interest and commissions, 12 per cent. on the total cost, inc. land, but excl. equip. and inc. eng., conting., legal and gen. exp. | 12 |
| Total | 24 |

Whitten, sec. 249, p. 225.

**Michigan Railroad Appraisal 1900-1901 (work in charge of Prof. M. E. Cooley):**

| | Percent of Inventory Cost |
|---|---|
| 1. Engineering | 3.2 |
| 2. Contingencies | 10.8 |
| 3. Legal expenses | .4 |
| 4. Interest during construction | 3.1 |
| 5. Organization | 1.5 |
| Total | 19 |
| In this appraisal the reproduction cost, less depreciation was also determined. The overhead charges amounted to 21.2 per cent. on reproduction cost, less depreciation | 21.2 |
| Inventory—reproduction cost | $170,291,556.00 |
| Overhead charges | 32,424,706.00 |

Whitten, sec. 251, p. 227.

## Minnesota Railroad Appraisal, 1908:

| | | |
|---|---|---|
| Inventory—reproduction cost | | $345,260,418.73 |
| Overhead charges | | 61,264,764.84 |
| | Amount | Percent of Inventory Cost |
| 1. Engineering, superintend. and legal exp. | $12,133,641.89 | 3.5 |
| 2. Contingencies | 17,869,703.02 | 5.2 |
| 3. Interest dur. const. | 31,261,419.93 | 9 |
| | $61,264,764.84 | 17.7 |
| In this appraisal the reproduction cost less depreciation was also determined, but the overhead charges were not depreciated. The overhead charges amounted to 20.8 per cent. on the inventory-reproduction-cost-less-depreciation | | 20.8 |

Whitten, sec. 252, p. 228.

## South Dakota Railroad Appraisal, 1910:

| | | |
|---|---|---|
| Inventory-reproduction cost | | $93,609,443.00 |
| Overhead charges | | 12,885,060.00 |
| 1. Engineering, superintendence and legal exp. | $3,645,811 | 3.9 |
| 2. Contingencies | 5,349,039 | 5.7 |
| 3. Other expenses | 972,552 | 1 |
| 4. Interest dur. construction | 2,917,658 | 3.1 |
| Total overhead | $12,885,060 | 13.7 |
| In this appraisal the reproduction cost less depreciation was also determined, but the overhead charges were not depreciated. The overhead charges amounted to 16.3 per cent. of the inventory-cost-less-depreciation | | 16.3 |

Whitten, sec. 257, p. 232.

**Washington Railroad Commission, 1910, *in re Valuation of Puget Sound Electric Railway Company:***

Inventory-reproduction-cost ..... $3,177,768
Overhead charges ..... 499,517

| | | Amount | Percent of Inventory Cost |
|---|---|---|---|
| 1. | Engineering and superintendence | $ 53,336 | 1.7 |
| 2. | Fiscal and physical superv. and management | 186,955 | 5.9 |
| 3. | Contingencies | 96,266 | 3 |
| 4. | Legal and general expenses | 17,779 | .5 |
| 5. | Interest during construction | 145,181 | 4.6 |
| | Total overhead | $499,517 | 15.7 |
| | In this appraisal the reproduction cost less depreciation was also determined, but the overhead charges were not depreciated. The overhead charges amounted to 19 per cent. of the inventory-reproduction-cost-less-depreciation | | 19 |

Whitten, sec. 259, p. 235.

**Wisconsin Railroad Appraisal (made by Prof. Wm. D. Taylor for and adopted by Wisconsin State Board 1903):**

Inventory-reproduction-cost ..... $179,223,284
Overhead Charges ..... 23,692,921

| | | Amount | Percent of Inventory Cost |
|---|---|---|---|
| 1. | Engineering, superintendence and legal expense | $6,253,188 | 3.5 |
| 2. | Contingencies | 9,857,280 | 5.5 |
| 3. | Interest during construct | 5,376,698 | 3 |
| 4. | Organization | 2,205,755 | 1.2 |
| | Total overhead charges | $23,692,921 | 13.2 |
| | In this appraisal the reproduction-cost-less-depreciation was also determined, but the overhead charges were not depreciated. The overhead charges amounted to 16.5 per cent. of the inventory reproduction-cost-less-depreciation | | 16.5 |

Whitten, sec. 261, p. 237.

**Appraisal of Chicago Surface Railways, 1906 (by Bion J. Arnold, Mortimer E. Cooley and A. B. DuPont):**

The appraisal was made under the authority and di-

rection of the City of Chicago, and as a basis the franchise settlement ordinances passed February 11, 1907.

| | |
|---|---|
| Inventory-reproduction-cost | $19,629,395 |
| Overhead Charges | 4,259,190 |

| | Amount | Percent of Inventory Cost |
|---|---|---|
| 1. Organizing, engineering and incidentals | $2,295,121 | 11.7 |
| 2. Legal exp., int., brokerage and contingencies | 1,964,069 | 10 |
| Total overhead | $4,259,190 | 21.7 |

Whitten, sec. 241, p. 213.

Appraisal Chicago Gas Plant, 1911, *in re Regulation of Gas Rates* (Appraisal by the City of Chicago):

| | |
|---|---|
| For the second period of construction allowances were: | |
| 1. Interest during construction | 5 |
| 2. Engineering, supervision | 5 |
| 3. Organization and legal | 2 |
| 4. Contingencies | 5 |
| Total | 17 |
| For the first Construction period allowances were: | |
| 1. Interest during construction | 6 |
| 2. Engineering and supervision | 5 |
| 3. Organization and legal expenses | 3 |
| 4. Taxes | 1 |
| 5. Contingencies | 7 |
| Total | 22 |

Average for entire period, 17 per cent., except on land 12 per cent., and in addition to these allowed 6 per cent. for discount on bonds.

Whitten, sec. 243, p. 217.

*Mayhew* v. *Kings County Lighting Co.*, 2 P. S. C., 1st D., N. Y.:

The following tabulation shows the overhead charges allowed in this appraisal made by the Commission in the matter of fixing the rate for gas:

| | | |
|---|---|---|
| Inventory-reproduction-cost | | $2,211,628 |
| Overhead Charges | | 601,149 |
| | Amount | Percent of Inventory Cost |
| 1. Contractors' profits, engineering and administration, conting. and incid. | $341,149 | 15.4 |
| 2. Preliminary and devel. expenses | 260,000 | 11.7 |
| Total overhead charges | $601,149 | 27.1 |

Whitten, sec. 255, p. 230.

**Wisconsin Railroad Commission,** ***in re Estimate of Cost of Municipal Lighting Plant for City of Milwaukee:***

Made for the city October, 1913, and set out in full in October number of Public Service Regulation, page 526.

| | | | |
|---|---|---|---|
| 1. Physical properties | | | $1,237,067 |
| 2. Overhead: | | | |
| (a) Omissions | | $ 61,853 | 5 |
| (b) Engineer, sup., contin. and c. | | 194,838 | 15.7 |
| Total overhead | | $256,691 | 20.7 |

SUMMARY OF PRINCIPAL VALUATIONS NAMED ABOVE AND SHOWING ALLOWANCES FOR OVERHEAD CHARGES.

STEAM RAILROADS

| | Gross | Overhead | Percent |
|---|---|---|---|
| Michigan* | $152,715,000 | $32,425,000 | 21.2 |
| Minnesota* | 294,525,000 | 61,265,000 | 20.8 |
| South Dakota | 93,609,000 | 12,885,000 | 16.3 |
| Wisconsin | 202,910,000 | 23,693,000 | 16.5 |
| Massachusetts | 299,970,000 | 40,334,000 | 15.5 |

*Present Value. Average of Overhead, 19.5%

## OTHER PUBLIC SERVICE UTILITIES—OVERHEAD ALLOWANCE.

| | |
|---|---|
| Des Moines, Ia.—Gas Company | 15 |
| New Jersey—Gas Company | 17.6 |
| Maryland—Gas Company | 21.39 |
| Chicago—Gas Company | 17 |
| New York—Gas Company | 27.1 |
| Des Moines—Water Works | 16 |
| Chicago—Surface Railways | 21.7 |
| Washington—Electric Railways | 19 |
| Massachusetts—Street Railways | 23 |
| Massachusetts—Steam Railways | 24 |
| Nebraska—Telephone Co. | 20.8 |
| Wisconsin—Electric Light | 20.7 |
| Great Britain—Telephone case | 31.4 |

The total value in the cases cited above exceeds one and one-half billion dollars, and the average allowance exceeds 20 per cent.

In this connection it must be borne in mind that the percentage of overhead allowances inclines to a reduction in large properties and is usually somewhat below the necessity for such allowances in smaller properties. The reports of the Public Utilities Commissions and the Courts are full of other cases which might be cited in support of our contention in this matter, but we feel that it is unnecessary to burden the Court with further discussion along these lines or the citation of many other decisions.

Attention is also called to the fact that the decisions cited are not those of any one body nor of one particular class of corporations, but cover a wide field both as to class of utilities and as to location; they are of sufficient importance to insure that the conclusions have been arrived at conservatively, after due deliberation and great care, and the consideration of these cases should be convincing proof that the percentage for overhead claimed by Mr. Lea is extremely conservative and not subject to criticism.

It was shown during the trial by Mr. Wiggins, the City's witness, that the actual construction cost to the company up to the first of January, 1913, was in excess of $784,000, and his testimony in this and the former hearing disclosed that some extensions and betterments made prior to 1890, in the earlier years of the history of the plant were not included in the construction account. His testimony was not questioned by any one except only inferentially by A. D. Adams, when he submitted his estimate of values, utterly ignoring actual costs. If we accept the testimony of Mr. Wiggins as a basis for construction cost of the plant and make calculations thereon for the item of interest during construction alone, conservatively estimated at a minimum period of one and one-half years, and apply thereto the current rate of interest of 6 per cent., this item alone would amount to $35,280.00, and would exceed the total allowance by A. D. Adams for interest during construction, engineering, contingencies, and all other items of overhead charges by $8,120.00.

On cross examination (Transcript, p. 1132) A. D. Adams said he made little or no allowance for taxes during construction, because they could or in all probability might be "dodged," but as we view this matter these expenditures are necessary and inflexible as fate; the items above enumerated alone equal $52,460.00, or $25,300.00 more than the total allowance of A. D. Adams. He concedes the necessity for all items, but after having expended $25,300.00 more than his gross allowance for the items named, where shall we look for funds to defray the equally and concededly necessary expenses for—

(1) Legal expense of organization, preparation of articles of incorporation, franchises and legal advice;

(2) Rent, stationery, clerical services and incidentals;

(3) Preliminary investigations, surveys, engineering plans, plats, specifications, preparation of contracts, and promotion;

(4) Engineering, supervision, administration and clerical services during construction, as well as rents, stationery and supplies;

(5) Omissions, contingencies and incidentals.

A. D. Adams does not claim to set up this estimate for overhead charges by reason of actual experience and knowledge acquired in the practical prosecution of gas plant construction or the gas business, but bases his knowledge solely upon his study and analysis of the reports and records lodged with the authorities of the Commonwealth of Massachusetts. A casual reference to those reports unequivocally discloses the fact that the authorities of the Commonwealth of Massachusetts allow for overhead charges, percentages in excess of those claimed by Mr. Lea, so that if, as Mr. Adams claims, his knowledge was derived from a study of these said reports, he is not giving us the benefit of his knowledge acquired through them, or he has deliberately ignored them in ariving at his alleged conclusions in this case in order that in his zeal for his client he might better serve his own interests.

Now, in the face of all the testimony heretofore recited and the authority quoted from, we beg to inquire how any one can justify the Master's findings of 12½ per cent. for overhead charges. We can not help concluding that he must have been influenced by the grotesque estimate of Mr. A. D. Adams. The Master does not say he was so influenced, but he fails to state why he did not estimate 19 per cent. on the one hand or 7 per cent. on the other, or why he eventually settled on a figure approximately midway between.

We respectfully submit that the Master erred in determining that 12½ per cent. was the proper allowance for overhead charges.

**Real Estate.**

The Master states in his report that he has valued all the real estate of the Company in the City of Lincoln actually or constructively used in its gas business. There is scarcely any escape from such a conclusion, for there would be no merit whatever in disallowing the value of land which is not now in immediate use, but which was purchased by the company in the exercise of its sound, honest discretion for future needs or other purposes.

As to the estimated value of the land, the Master first says:

> "Upon this property, Henry I. Lea, the gas engineer, who made the general appraisement for the company, placed a valuation of $19,320.00" (Transcript, p. 38).

This statement is not quite true, so for the sake of accuracy it may as well be corrected at once. Mr. Lea named the figure quoted by the Master to cover *all* the real estate connected with the company's gas business; but for the real estate situated in the City of Lincoln, his estimate was $18,520.00, which excluded two lots in Havelock, valued at $800.00.

The Master continues:

> "This figure was fixed upon by Mr. Lea after inquiry among real estate dealers and others having knowledge of land values in and about Lincoln. Its substantial correctness is vouched for in detail by other witnesses testifying on behalf of the company. On the other hand, Mr. A. D. Adams, consulting gas engineer, testifying for the City, fixed the value of Lots '1' to '12,' inclusive, Block '79,' which the City claims is the only real estate devoted to the gas business, at $2,625.00" (Transcript, p. 38).

It is not of place to remark at this point that for the very piece of property which Mr. A. D. Adams, the City's expert, values at $2,625.00, the experts for the company gave the following value: Lea, $11,000.00; Purbaugh, $13,600.00; Green $12,000,00; Culbertson, $14,400,00; Reed, $11,569.00. As to the qualifications of these witnesses, we beg to refer to our discussion of that subject in Vol. III of this brief.

Continuing in his report, the Master makes some statements which, though unimportant at first glance, are, we submit, of tremendous significance in determining the merit of the Master's conclusions in this case. He said:

> "*This estimate* (referring to the City's estimate of $2,625.00) though *obviously too low* for the lots embraced in it, *is supported* to a considerable extent *by witnesses for the City.* The local witnesses were all men of fair intelligence, evident candor and *qualified* by observation and experience *to give evidence* entitled to *serious consideration.* In circumstances of this kind there is, of course, no means by which a court can with precision lay its finger on the truth. The most it can do, in the light of the opinions given by others, is to express an opinion of its own. In my judgment, $16,250.00 is a fair allowance to the plaintiff for all of the real estate which it claims is devoted to or properly chargeable against the gas business" (Transcript, p. 38).

Let us analyze this situation a little more closely, for we claim that it is most significant and enlightening. The Master finds that Mr. A. D. Adams's estimate is "*obviously too low.*" In other words, the Master himself, although knowing nothing about the value of real estate in Lincoln, and basing his statement solely on the evidence, says that Mr. A. D. Adams's estimate is *obviously* too low—that is, the fact that the figure is too low is *easily apparent, readily discernible*, even to a

casual observer. *Obviously*, then, Mr. A. D. Adams knows nothing about real estate values in the City of Lincoln, or he would not have given an estimate which is so apparently without merit. But another very significant fact is, that the estimate, although obviously too low, "is supported to a considerable extent by witnesses for the City." Stated in another way, the Master says that the City put four witnesses on the stand *as experts*, who *supported* a real estate *value* which was *obviously* too low, even to the Master. Now, what weigh would the normal, sensible person—the average prudent man—give to the opinion of a so-called real estate expert who attempts to sustain and give an opinion under oath as to a valuation which is *obviously* too low? His conclusion would immediately be that the alleged expert was either dishonest or ignorant about real estate values. In either case further consideration of the alleged expert's opinion would be dismissed with scant ceremony. But the Master says that "the local men (which phrase includes the City's so-called experts) were all men of fair intelligence, evident candor and qualified by observation and experience to give evidence entitled to serious consideration." This means that the Master concludes that the City's real estate witnesses, who were the men attempting to support, under oath, the estimate which was obviously too low, were considered by the Master to be "qualified by observation and experience to give evidence entitled to serious consideration." Here is the only place in the Master's report where he gives a faint suggestion (in general terms, to be sure) of his judgment concerning the weight to be attached to the testimony of persons who testified before him as expert witnesses. And he states that the City's witnesses on this subject—although they gave opinions supporting a value which was, even to the Master, obviously too low—gave "***evidence entitled to serious consideration.***"

But there is still further significance to the Master's statement above quoted. It will be noted that the City's witnesses on real estate gave an estimate on only a fraction of the Company's real estate. These pieces of real estate are known as lots "1" to "12," block "79." And this was the estimate of $2,625.00, which the Master says was obviously too low. The City's witnesses did not attempt to give estimates on the remainder of the Company's real estate. Their one estimate, therefore, was summarily dismissed by the Master. It was too low, obviously. To all appearances their opinions and estimates were thrown out of the calculation, or if they were not, they ought to have been. The result is just this—there was no evidence on real estate values before the Master, entitled to consideration, except the Company's witnesses. Their estimates of all the Company's lands devoted to the gas business in Lincoln were: Lea $18,520.00 (Transcript, p. 557), Purbaugh $19,030.00 (Transcript, p. 561), Green $17,600.00 (Transcript, p. 559), Culbertson $18,390.00 (Transcript, 560).

The Master estimates the Company's real estate at $16,250.00. Where did he get that figure? He doesn't say. We cannot even guess. It was not from the estimates given by the Company's witnesses. Manipulate as you will, the estimates of Messrs. Lea, Purbaugh, Green, Culbertson and Reed, you cannot arrive at a conclusion of $16,250.00. Now the estimates of the Company's witnesses were the only ones before the Master for him to pick from. The values given by the City's witnesses were dismissed from the calculation as obviously too low. There was nothing left for the Master to choose from except the estimates of the Company's witnesses. It is true that their values were not conclusive on the Master as a matter of law, but as a matter of common reason and fairness, some one of those five values should have been adopted; unless by chance the Mas-

ter had some reason to believe they were all too high. But he does not say so in his report. He gives no reason for lowering their estimates; no reason why their estimates were not deemed reliable. But the most mysterious phase of the matter is to determine how the Master calculated the figure, $16,250.00.

To be frank, we do not think he did calculate that figure. We think he merely picked it out at random.

Now we have gone into this matter of real estate valuation rather fully in spite of the fact that the difference between the Company's estimates and the Master's finding is comparatively small in dollars and cents —a matter of two thousand dollars odd. But we see well illustrated in this finding of the Master a well defined tendency which runs through the length of his report, to base his estimates on no figure submitted in evidence, but merely to reach out haphazard somewhere between the respective valuations of the Company and the City, pick a figure and write it down as a final valuation in his report. And all this without suggesting in his report the faintest hint of his reasons for adopting his specific value as against the estimate of the Company on the one hand, or the City on the other (except that in the matter of real estate valuation he does say that the estimate of the City's witnesses was obviously too low); and he never once attempts to make a statement of the basis of his calculation.

This suit is a serious matter for the Lincoln Gas & Electric Light Company. It claims that its properties are being confiscated. It has its day in court and before it is dismissed thence, it has a right, in all fairness, to ask the reason. It has used painstaking care to present to the Master in this case the best opinions as to gas properties and operation which it can obtain; it has toiled laboriously and expended much time and money to place before the Master *all the facts and all the rea-*

*sons* upon which it bases its estimates. Now if the opinions of its experts are not accepted, or if the facts it presents are held not to sustain its conclusion, it has a right, and it demands to know, the reasons. The Master's report fails to give reasons.

Another inducement which persuaded us to discuss the question of real estate valuation at such length in this brief, is because we think it illustrates a further point with regard to the Master's decision in this case. And that point can be stated in quite simple and unequivocal terms: The *Master's judgment* as to the *qualifications* of expert witnesses and the *weight* to be attached to their testimony *is not sound.*

**Buildings.**

In order to aid the Court in determining at a glance the differences between the estimated costs and present values of Buildings as given by Mr. Lea and Mr. A. D. Adams and the conclusions of the Master in respect thereof, we have prepared and here insert a tabulation showing such differences in convenient form. (Where blanks occur it indicates that no finding was made or testimony submitted):

BUILDINGS.

| | Master | Lea | Adams |
|---|---|---|---|
| **Purifying House:** | | | |
| Net Construction Cost | $..... | $16,620 | $12,577 |
| Reproduction Cost | 16,700 | 19,277 | 13,457 |
| Present Value | 13,200 | 14,074 | 8,427 |
| **Generator House:** | | | |
| Net Construction Cost | ..... | 3,759 | 3,261 |
| Reproduction Cost | 4,000 | 4,337 | 3,489 |
| Present Value | 3,800 | 4,120 | 3,016 |
| **Retort House:** | | | |
| Net Construction Cost | ..... | 3,739 | 6,088 |
| Reproduction Cost | 7,500 | 8,919 | 6,515 |
| Present Value | 6,375 | 6,511 | 4,079 |

| | | | |
|---|---|---|---|
| **Meter Shop and Booster House:** | | | |
| Net Construction Cost | | 2,616 | 2,049 |
| Reproduction Cost | 2,850 | 3,035 | 2,192 |
| Present Value | 2,660 | 2,883 | 1,895 |
| **Coal Shed:** | | | |
| Net Construction Cost | | 1,793 | 1,657 |
| Reproduction Cost | 2,080 | 2,080 | 1,773 |
| Present Value | 520 | 520 | 746 |
| **Oil Tank House:** | | | |
| Net Construction Cost | | 1,558 | 1,107 |
| Reproduction Cost | 1,807 | 1,807 | 1,185 |
| Present Value | 1,500 | 1,500 | 858 |
| **Stable and Blacksmith Shop:** | | | |
| Net Construction Cost | | 818 | 818 |
| Reproduction Cost | 949 | 949 | 875 |
| Present Value | 493 | 493 | 327 |
| **District Holder Booster House:** | | | |
| Net Construction Cost | | 721 | ..... |
| Reproduction Cost | 811 | 836 | ..... |
| Present Value | 770 | 803 | ..... |
| **Oxide Shed:** | | | |
| Net Construction Cost | | 60 | 60 |
| Reproduction Cost | 70 | 70 | 64 |
| Present Value | 63 | 63 | 53 |
| **Totals:** | | | |
| Net Construction Cost | | $35,614 | $27,617 |
| Reproduction Cost | $36,767 | 41,312 | 29,550 |
| Present Value | 29,381 | 30,967 | 19,401 |

(As to Lea's valuations see Transcript, pp. 1304-1320; as to Adams' valuations see Transcript, p. 1453; as to the Master's valuations see Transcript, pp. 39, 40.)

Here again it will be noted that the difference in totals between Mr. Lea's estimate and the Master's findings does not represent a very great amount in dollars. But nevertheless it is clear that the Master used no definite method of calculation, based on the evidence, in arriving at his results. He does not specify what evidence or whose evidence he is relying on (except in the case of a few of the smaller buildings where he accepts the figures of Mr. Lea), nor does he show why the estimates of either witness are disregarded or accepted as the case may be

or what effect the testimony of the respective witnesses had upon his conclusions. For instance, in the cases of the Coal Shed, the Oil Tank House, the Stable and Blacksmith Shop and the Oxide Shed, he uses the Reproduction Cost and Present Value of Mr. Lea without the slightest variation, even though the estimates of Mr. A. D. Adams were in each case appreciably different. Now, if Mr. Lea is competent and qualified to give an accurate valuation of some of the buildings, why is not more consideration given to his estimates on all of the buildings? The report does not tell us. What reason is there for not accepting Mr. Lea's figure on the Purifying House, which is the most expensive building of all, and concerning which Mr. Lea testified more in detail than all the other buildings combined; and his estimates on the Purifying House were corroborated more closely by the testimony of other witnesses than any of the other buildings? If Mr. Lea's figures are not reliable in one case why not in all? The Master should have specified which items of unit cost in the Purifying House were erroneously given by Mr. Lea. Furthermore, as to the District Holder Booster House Mr. Lea's estimates were the only ones submitted in evidence and there could be no other valuation on which the Master could possibly rely. Yet he reaches a figure lower than Mr. Lea's, though why he does so, we are at a loss to know. The amount involved is comparatively trifling, but it shows clearly that the Master has not made findings based on the evidence.

Moreover, if we analyze the Master's findings on Buildings Valuation, the conclusion cannot be resisted that, throughout this group of valuations at least, he had no method or basis of determining values and did not even rely on the evidence before him. Both Mr. Lea and Mr. A. D. Adams gave their estimated values in three forms, to wit: They first estimated the Net Construction Cost

(which includes the cost of materials and labor solely); from this they calculated the Reproduction Cost (which is arrived at by adding Overhead Charges to the Net Construction Cost); they next deduced the Present Value (which is found by deducting from the Reproduction Cost the estimated amount of Depreciation). In all of their estimates, Mr. Lea and Mr. A. D. Adams present their figures under these three headings. The Master, however, fails to give, in case of each of the buildings, a finding as to estimated Net Construction Cost. He does not specify what unit costs for labor and materials he uses, and it is impossible to determine the Master's Net Construction Cost, except by indirect means—that is, calculating his Net Construction Cost by deducting 12½ per cent. from his Reproduction Cost (12½ per cent. being what the Master has estimated to be a proper allowance for Overhead Charges). This method shows us what the Master's Net Construction Costs (whether he realized it or not) were. The following shows the same in tabulated form:

| | |
|---|---|
| Purifying House | $14,844.00 |
| Generator House | 3,556.00 |
| Retort House | 6,667.00 |
| Meter Shop and Booster House | 2,533.00 |
| Coal Shed | 1,849.00 |
| Oil Tank House | 1,606.00 |
| Oxide Shed | 62.00 |
| Stable and Blacksmith Shop | 844.00 |
| District Holder Booster House | 721.00 |
| Total | $32,682.00 |

This tabulation puts the Master's findings in a rather peculiar light. In the case of the Coal Shed, Oil Tank House, Stable and Blacksmith Shop and Oxide Shed, his Net Construction Cost is *higher* than Mr. Lea's, and

Mr. Lea's Net Construction Cost was the *highest* submitted in evidence. In other words, in all those instances, where the Master has adopted Mr. Lea's Reproduction Cost, the Master's Net Construction Cost *ipso facto* becomes higher than any estimate in the record. Now the Net Construction Cost, it will be remembered, is made up of the total *unit cost* of materials and labor. So that the unit cost for materials and labor in the Coal Shed, Oil Tank House, Stable and Blacksmith Shop and Oxide Shed the Master finds to be higher than any estimate given by any witness. This must be the case or his findings would be meaningless. Now, if the Master's unit costs of materials and labor are higher than Mr. Lea's in the case of the buildings just mentioned, then it follows that they must be higher in the case of, let us say, the Purifying House. There is positively no reason why this does not hold true. The units of cost are the same in each of the buildings. That being the case, how could the Master have calculated his Net Construction Cost of the Purifying House, using higher unit costs than Mr. Lea, so as to reach a result lower than Mr. Lea's Net Construction Cost, unless there is doubt in the record as to the amount of material which actually went into the building; but there is no question as to the amount of material in each building, because Mr. Brodnax in his inventory (prepared with "unusual thoroughness," as the Master says), shows exactly what was there. The Master specifically states that during the long trial there was only *one error discovered in this inventory* and the record shows that this so-called error, which the Master is referring to, occurred in calculating the number of feet of mains, and had nothing to do with the buildings. So that it is conceded by the Master that there can be no doubt of the amount of material in the building.

The only ground for difference in estimating Net Con-

struction Cost, therefore, is in determining the unit costs. The situation which confronts us is that the Master, although using higher unit costs for the same amount of material, estimates a lower Net Construction Cost than Mr. Lea. Such a finding is clearly absurd. If we deduct the Master's 12½ per cent. (representing his Overhead Charges) in order to get his Net Construction Cost on the Purifying House, we arrive at the figure of $14,844 as against Mr. Lea's $16,620. But we have just shown that inasmuch as the Master's units of cost were *higher* than Mr. Lea's, the former's Net Construction Cost must be *at least* equal to, though logically, more than Mr. Lea's. But assuming for the purpose of a quick calculation that the Master's Net Construction Cost is equal to Mr. Lea's, then the Master's Reproduction Cost (on the basis of 12½ per cent. Overhead) should have been *at least* $18,707 for the Purifying House instead of $16,700, which appears in his report. It is quite evident that the Master must have made a serious blunder somewhere in his calculation when he finds the Reproduction Cost of the Purifying House as $16,700 when, as we have shown, it should have been $18,707.

We will be frank, however, and state unequivocally, that we firmly believe the Master had no method of calculation whatsoever. As we have said before, we believe he has merely picked his figures at random. We don't believe he estimated any Net Construction Cost at all or used any unit of cost for labor or materials or anything else, when framing his report; and that he omitted to specify any Net Construction Cost in his report in an effort to save himself from laborious calculations. But the fact that he was compelled to specify some per cent. for Overhead Charges and chose 12½ per cent., unables us to check his figures and show that his estimates are absolutely without foundation in the record.

To bring out our contention more clearly we will make another calculation. The Master does not show the estimated life of any of the Buildings—that is, their expected existence or usefulness. Now, the matter of life and actual age of Buildings must be decided on in order to determine their Present Value (which is figured by deducting the Depreciation from the Reproduction Cost). There was considerable difference between the estimate as to life or expected existence of these Buildings as given by Mr Lea and Mr. A. D Adams, but there was no controversy at all as to the *actual ages* of any of the Buildings, because that was a matter of fact which was proved and admitted. As to the calculation of Depreciation, the Master states in his report that he has used the "straight line" method of figuring; that is a method by which Depreciation is found by deducting from the Reproduction Cost a certain per cent. of said Reproduction Cost, based on the number of years the property has been in existence. In figuring his Present Value from his Reproduction Cost, therefore, the Master must have determined the life of each Building and thus decided the amount to be deducted from the Reproduction Cost for each year of actual existence. As we have said, the Master does not tell us his findings as to the various estimated lives of the respective Buildings; but having his Reproduction Cost and his Present Value, we know that he must have deducted the difference between the two from his Reproduction Cost as representing the amount of Depreciation in dollars. By dividing this sum by the number of years the Buildings have been in existence, we can tell what was the amount in dollars which the Master found must be set aside annually to take care of Depreciation. And by dividing the amount thus found, representing the Depreciation annuity, into the total Reproduction Cost, we get exactly the life *in years* which the Master

must have estimated the respective Buildings had. The calculation with the Master's figures to determine this Depreciation annuity results, as follows:

| Buildings | Age (Yrs.) | Reproduction Cost | Present Value | Depreciation Annuity |
|---|---|---|---|---|
| Purifying House | 22 | $16,700.00 | $13,200.00 | $159.09 |
| Generator House | 5 | 4,000.00 | 3,800.00 | 40.00 |
| Retort House | 22 | 7,500.00 | 6,375.00 | 51.14 |
| Meter Shop and Booster House | 5 | 2,850.00 | 2,660.00 | 38.00 |
| Coal Shed | 22 | 2,080.00 | 520.00 | 70.90 |
| Oil Tank House | 15 | 1,807.00 | 1,500.00 | 20.47 |
| Stable and Blacksmith Shop | 15 | 949.00 | 493.00 | 30.40 |
| District Holder Booster House | 3 | 811.00 | 770.00 | 18.67 |
| Oxide Shed | 3 | 70.00 | 63.00 | 2.33 |

Having found the Depreciation annuity we can then determine the life (in years) of each Building ascribed to it by the Master, and we have set this conclusion down in the following tabulation together with the estimated lives as given by Mr. Lea and Mr. A. D. Adams in their testimony:

| Buildings | Master | Lea | Adams |
|---|---|---|---|
| Purifying House | 104.9 | 50. | 66.6 |
| Generator House | 100. | 50. | 66.6 |
| Retort House | 146.6 | 50. | 66.6 |
| Meter Shop and Booster House | 75. | 50. | 66.6 |
| Coal Shed | 29.3 | 25. | 40. |
| Oil Tank House | 88.2 | 50. | 66.6 |
| Oxide Shed | 30. | 20. | 25. |
| Stable and Blacksmith Shop | 31.2 | 25. | 25. |
| District Holder Booster House | 59.3 | 40. | 66.6 |
| Average or composite life of all buildings. | 86.3 | 46.25 | 62.5 |

Having made a casual inspection of the above tabulation, we then put the following pertinent inquiries:

(1) Did the Master base his findings on the evidence?

(2) Did the Master actually adopt any real method of calculating values or has he picked values at random?

(3) Was the Master appointed to find facts from evidence or merely to give his own opinion?

(4) Does the Master consider himself better qualified as an expert than both Mr. Lea and Mr. A. D. Adams?

(5) Have the Master's findings any real merit?

We think it will aid the Court in deciding the questions raised by our exceptions, to give herein a brief summary of the evidence before the Master on the valuation of buildings, confining ourselves, however, in order not unnecessarily to prolong the discussion, to a consideration of the evidence relating solely to the Generator House, inasmuch as the Generator House was built in 1907 and there was better opportunity to show its actual cost.

Mr. Lea in Exhibit "7," sub. H, gave the Net Construction Cost of all the buildings at $35,614.00, the Reproduction Cost at $41,312.00 and the Present Value at $30,967.64. (Transcript, p. 1304.)

Mr. A. D. Adams for the City gave the Net Construction Cost at $27,617.00; the Reproduction Cost at $29,550, and the Present Value at $20,759.00. (Transcript, p. 1453.)

Mr. Lea's valuation of the buildings is supported by the record of the buildings and by the testimony of Mr. Hahn, who constructed portions of the building, and Mr. Davis, the architect, who gave the unit cost of the materials and labor entering into the construction. Against this valuation is the testimony of Mr. A. D. Adams and in part the foolish estimates presented by Mr. Assenmacher. We have already considered in the early

part of this case the qualifications of Mr. Assenmacher, as an expert on the value of buildings, and we do not deem it necessary to add here anything further to what we have heretofore stated.

Mr. Brodnax with a corps of assistants made a complete detailed inventory of all the Company's property, including the buildings, which was made the basis for Mr. Lea's valuation.

Mr. Brodnax testified, with reference to the inventory to the effect that he first made a property plan showing the location and size of each building, taking each building separately and making a scale drawing with transverse and longitudinal sections and plans; then summarized the materials in the buildings, making the same practically in the form of a bill of material, beginning primarily with the excavation footings, making actual measurements of the lengths, height and thickness of the walls, besides the brick, in each building, and computed the amount and made a detailed statement of all the material in the buildings, ascertaining in each instance the exact quantity and character of material, to the end that he would have practically the same bill of materials in taking down the building in this way that would be used in putting it up. (Transcript, p. 502.)

*Generator House.*

Mr. Lea's estimate:

Net Construction Cost, $3,739; Reproduction Cost, $4,337; Present Value, $4,120.

In Exhibit "7-H," (Transcript, pp. 1305-20), Mr. Lea gives the details in quantities and materials entering into the Generator House, and gives a Net Construction cost of each of such units of quantities.

Mr. Lea figured brick in the wall at $17 per thousand,

except in brick in the pilasters and cornices, which were figured at $21.25 per thousand; lumber at the works at $26, $27 and $28, and lumber in place at $42 per thousand (303); steel in the floors and roof of the building at 3c to 5c per lb. in place, depending upon size and weight.

Mr. Lea figured brick f. o. b. Lincoln $7.50 per thousand, sand per thousand brick 38c, cement 79c, lime 49c, total $9.07; labor and time for brick layers $4.16; helpers $1.87; carpenter 77c, miscellaneous cost of handling materials $1.16; total labor $7.96. The total cost of material and labor per thousand brick in wall would therefore be $17.03, and for the sake of convenience, Mr. Lea used $17.

In this computation Mr. Lea figured on common brick and used the figure $17 per thousand in place and $21.25 for the pilasters and cornices, and applying these unit costs to the quantities of material in the Generator House, Mr. Lea found the Net Construction Cost to be $3,739.

Ellery Davis, the architect, was a witness for the Company. His qualifications have been heretofore discussed. He prepared and submitted a detailed statement of the items of material and labor cost per thousand brick in the wall—where lime mortar was used and where cement mortar was used—and a detailed statement of the quantity of material and the cost of each, and the labor cost of the concrete and rubble stone work, the details of which will be found in his testimony on pages 539 to 544. We present here a summary of the unit costs for material and labor for brick and stone work submitted by Mr. Davis:

## Unit Cost for Brick Work.

By Ellery Davis.

| MATERIAL | | LABOR | |
|---|---|---|---|
| Brick, per thousand | $8.00 | Mason work, Union scale | $0.70 |
| Sand, per yard | 1.35 | Stone mason | .65 |
| Lime, per yard | 1.25 | Helper | .30 |
| Stone, com., per yard | 2.56 | Common laborer or shoveler | .25 |
| Stone, small, per yard | 2.70 | | |

Note: These totals include profit of from 10 to 15%.

Note: Profit of 10% should be added to total of above items.

### Cost for 1,000 Brick With Lime Mortar.

| MATERIAL | | LABOR | |
|---|---|---|---|
| Brick, per thousand | $8.00 | Mason (160 brick per hr. at 70c. per hr.; 6 hrs.) | $4.20 |
| Lime, white, .91 bbl. | 1.14 | Helper, 6 hrs. at 30c. | 1.80 |
| Sand, ⅝ yard | .84 | Adding 10% profit | .60 |
| Waste, broken brick | .30 | | |
| Total material | $10.28 | Total labor | $6.60 |

Total labor plus material, $16.88.

This does not include anything for foreman's time.

### Cost for 1,000 Brick With Cement Mortar.

| MATERIAL | | LABOR | |
|---|---|---|---|
| Brick, per thousand | $8.00 | Mason, 7 hours | $4.90 |
| Cement, per bbl. | 2.00 | Helper, 7 hrs. | 2.10 |
| Lime, .73 bbl. | .91 | Adding profit 10% | .70 |
| Sand, ⅝ yard | .84 | | |
| 3% storage and waste | .35 | Total labor | $7.70 |
| | | Total material | 12.10 |
| Total material | $12.10 | Total material and labor | $19.80 |

Mr. Brodnax testified that he had applied the unit cost furnished by Mr. Davis to the quantities of material in the different buildings and determined the cost based on such unit prices; that using the unit cost for excavation furnished by Robert Malone, the excavator, the computation showed a net construction cost for the generator house of $3,902, as against Mr. Lea's $3,739, and a repro-

duction cost of $4,526, as against Mr. Lea's $4,337, and as against Alton D. Adams's net construction cost of $3,261 and reproduction cost of $3,489 or a difference between the net construction cost as furnished by Davis-Brodnax, and as testified to by A. D. Adams, of $1,037 (Transcript, p. 509).

The company offered in evidence the detailed statement taken from the books of the Company, showing the actual cost of this generator house. The items and details are shown (Transcript, pp. 1717-19), and show the amount of money paid out by the Company, on account of the generator house. The cost records of the Company show that the company paid out in building the generator house, exclusive of the Otis elevator, the sum of $4,465.88. This is $1,204.88 more than A. D. Adams's estimate and allowance for the net construction of the generator house. The record of the actual cost of this building is a truthful witness and stands as proof of the fact that this building cost the company $1,204.88 more than the estimated cost by the City's alleged expert.

Mr. Perry Hahn, the contractor, who built the generator house above the foundation walls for the company, testified in part, as follows:

> "A. I paid $7.50 per thousand F. O. B. gas works for the brick and got them of Yankee Hill Brick Company. At that time the ordinary price at which brick were selling was $7 per thousand, and I paid $7.50, because I got an extra good brick. * * * When I took the job they specified that there would have to be an extra hard brick for the outside and that represents the extra cost" (Transcript, p. 545).

Mr. Hahn gave the details for material and labor costs per thousand in place, on cross examination by A. D. Adams and testified that he was a building contractor and had followed that business in Lincoln since 1881, and had built three of the buildings for the gas

plant; testified that his contract price for that portion of the generator house built by him was $3,650 and presented a statement, showing the cost of materials and labor itemized, which was identified as Exhibit "365" (Transcript, pp. 20-26).

As against this testimony on the part of the company, which speaks conclusively on the cost and value of the generator house, we have the testimony of A. D. Adams, *who accepted the quantities of materials,* but applied a different unit cost for the four items; (1) brick f. o. b. plant, and in place; (2) concrete; (3) excavation; (4) stone.

The vouchers for brick upon which the witness, Adams, based his estimate are Exhibits "420," "421" and "422" (Transcript, p. 1631).

Exhibit "421" is a voucher showing payment for a small amount of brick purchased by the company from Mr. Hahn in 1909, showing a price of $2.75 per thousand. Mr. Hahn testified that he was not in the brick business and did not remember having sold any brick; that if he sold these brick it must have been that he had finished up his work and had brick left over, and rather than pay further switching charges and expense in reloading the brick, he may have sold what he had left over on the job to the company for less than the amount he paid. (Transcript, p. 546.)

Exhibit "420" was for brick purchased in 1907. The amount of the bill was $388.12, and with respect to this bill A. D. Adams, on cross-examination, admitted there should be added a switching charge of 25c a thousand; that the bill did not indicate whether the brick were f. o. b. brick works or plant, or whether the brick were common brick for use about the plant where a cheaper class of brick can be used; or whether they were a good grade of hard building brick; that the character of the brick would account for a variation

of several dollars per thousand; that he did not know whether the freight charges or switching charges were included, and did not know the kind or character of the brick represented by the bills. (Transcript, p. 1091-3.)

We insist that with this limited information the witness was not qualified to testify as to the unit price for a good quality of brick such as was required in the buildings at the gas plant. Exhibit No. "422" is for $91,000 worth of brick at $7.00 per thousand, and this bill, like the exhibits "420" and "421," conveys no information as to the character of the brick or whether the brick were f. o. b. brick factory or f. o. b. plant, and if f. o. b. brick factory would indicate a price on the particular brick whatever their quality may have been, equal to the price paid by Mr. Hahn. These three vouchers and exhibits are the sum total of the information acquired by the witness A. D. Adams on the price of brick locally upon which he based his price of $7.00 per thousand for the generator house, purifying house and other buildings of the Company, and it is this character of information that he regarded as more reliable than information available at the brick factory, or from those engaged in handling building materials in the city, or from contractors and builders or architects in the city. It is unbelievable that he did not investigate and learn from architects, contractors and builders and those engaged in handling building materials in the locality, what such materials would cost. It is our conviction that he did make such investigation and was not able to secure from that source the kind of information needed; that his assumption that such information was not reliable is a pretense and excuse for not bringing such witnesses before the Court. Under the circumstances, when such low costs were required, he was the only witness who would fill the bill and answer the purpose.

The witness A. D. Adams testified that he used the unit price of $7.00 per thousand for brick in the various buildings and $15.00 per thousand for the brick in the walls (Transcript, p. 1094); that he used the unit price of $7.00 per yard for stone and concrete in the foundations and 40c per cubic yard for excavation, removal and disposition of the dirt (Transcript, pp. 873, 1095); that he investigated the cost of removing the dirt from the three State Fair buildings before making up his estimate (Transcript, p. 1088), but does not recall that he had any other figures in Lincoln for the removal of dirt for buildings (Transcript, p. 1088).

The evidence shows that the cost for excavation at the plant for these buildings was not less than $1.00 per cubic yard.

The testimony of Robert Malon and Mr. Abel sufficiently establish the cost for excavation at the plant at $1.00 per cubic yard. We will present later the matter of the cost in our discussion of the cost of excavation for the trenches. It is sufficient here to call attention to the testimony of Mr. Malone and Mr. Abel, introduced by the company on this point. They are the two men in this locality whose business it is to know excavation costs, and both men were familiar with the conditions in Salt Creek valley and at the plant. Their statement as to the cost for excavation at the plant were backed by experience in that kind of work.

The following is a summary of the value of the buildings, net construction cost, as shown by the witnesses for the Company and the witness for the City:

NET CONSTRUCTION COST.

| | | |
|---|---|---|
| H. I. Lea | Exhibit "7-F" | $35,614.00 |
| Davis-Brodnax | Exhibit "65" | 38,768.00 |
| A. D. Adams | Exhibit "235" | 27,617.00 |

REPRODUCTION COST.

| | | |
|---|---|---|
| H. I. Lea | Exhibit "7-D" | $41,312.00 |
| Davis-Brodnax | Exhibit "65" | 44,970.00 |
| A. D. Adams | Exhibit "235," 7% | 29,550.00 |

In view of the testimony as above summarized, we submit that it appears from the record that the estimate of the Company's witnesses was fully substantiated and that there was no justification in the record for the Master's finding of a value for buildings lower than the Company's. We submit that the Master's findings indicate his practice in this suit of cutting off some part of the values proved by the Company (varying in degree in each instance), irrespective of the evidence before him.

**Works Equipment.**

The various items making up the Company's Works Equipment was settled by the Broadnax inventory, which was used and followed throughout the hearing by all the parties. Therefore, the various items being admitted, it was only necessary in determining the Net Construction Cost to apply the proper unit costs. From the Net Construction Cost the Reporoduction Cost is then calculated by adding the amount of the Overhead Charges; and from this amount the Present Value is figured by deducting Depreciation.

The Master, in that part of his report headed "Works Equipment," begins by saying:

> "The property here included consists of seventy-three items. The evidence of value comes principally from the experts, Lea and Adams, and clashes irreconcilably at almost every point." (Transcript, p. 40.)

But the Master fails to explain that there was no clash between Mr. Lea and Mr. Steinmueller, the expert

from the Western Gas Construction Company, who gave estimates on the Net Construction Cost of the principal or more expensive items of Works Equipment, and whose figures uniformly sustained Mr. Lea's; in fact, the total figures for the items on which Mr. Steinmueller gave estimates was slightly higher than Mr. Lea's for the same items. Mr. Lea's Net Construction Cost figures are $155,524 for these items and Mr. Steinmueller's $158,524. And there was no clash between Mr. Lea and Mr. Steinmueller, and the records of the company as to what has *actually been paid in cash* for the various items of equipment. The only clash between Mr. A. D. Adams on the one hand and Mr. Lea, Mr. Steinmueller and the company's records on the other.

Furthermore, if the evidence of Mr. Lea and Mr. Adams clashed *irreconcilably*, at least one of the two witnesses must have been in serious error—in fact, not qualified to testify as an expert. And where all the other evidence corroborates and supports one of the witnesses, it does not require a great amount of acumen to determine which of the witnesses is in error. But nevertheless the Master here, as always, steadfastly refuses to give us his conclusions as to the weight which he attaches to any of the evidence. We are left completely in the dark as to why he selects the value set forth in his reports. He says further:

> "In considering the evidence of these experts, I have been aided, of course, by the testimony of other witnesses and by reports, letters, bills, contracts, vouchers and other documentary proofs. *Upon every disputed item all the evidence, oral and written, which I have been able to find in the record has been examined, considered and given in the decision reached its proper weight of inflence.* After ascertaining the Reproduction Cost which is in the aggregate $198,868, and making proper deductions for Depreciation, I present here *without discussion*

> *of the evidence* my conclusion that the present value of the seventy-three units, which compose this division of the company's property, is $179,310" (Transcript, p. 40).

Now, if the Master has, as he says, examined, considered and given proper weight to *all the evidence upon every disputed item*, we think we have the right to inquire why he sets forth merely his conclusions "without discussion of the evidence." Does he honestly believe, as he states at the outset of his report under "Preliminary Observations," that a summary of the evidence would "aid neither court nor counsel in testing the correctness of the conclusions which I have reached." We ask in all seriousness how the Court or we can test the correctness of his conclusions unless he does discuss the evidence upon which his conclusions must be founded. There is only one other possible way to do so, and that is for the Court to read the entire record from beginning to end, and even then the Court would lack the opportunity to personally observe the bearing of the various witnesses on the stand and to aid his judgment by such observation. The Master was appointed for the very purpose of reporting on and summarizing the evidence, as well as to give his conclusions based thereon, in order to relieve the Court of the burden of reading a great mass of testimony, much of which relates to issues at first deemed important by the City but later abandoned as immaterial. We can not understand how the Master so completely fails to grasp the proper conception of the necessity for appointing him to act as such.

Furthermore, we feel compelled to state frankly, and we will proceed to point out, that the Master *has not* done what he claims to have done—that is, he has not examined or considered all the evidence which he could have found in the record nor given it proper weight of

influence. We believe we can demonstrate this with little difficulty, as follows:

The Master gives us his Reproduction Cost and his Present Value. He does not specifically state what his Net Construction Cost is. We will first compare the Master's total estimates (or rather such of those as are given by him) with the estimates of Mr. Lea and Mr. A. D. Adams.

| | Master. | Lea. | Adams. |
|---|---|---|---|
| Net Construction Cost... ..... | | $218,358 | $160,069 |
| Reproduction Cost..... | $198,868 | 253,298 | 171,274 |
| Present Value ..... | 179,310 | 196,759 | 130,544 |

(Transcript, pp. 40, 1368).

Now, although the Master has not told us in figures what his Net Construction Cost is, we know that he must have calculated his Reproduction Cost by adding 12½ per cent to his estimated Net Construction Cost. Having his Reproduction Cost only, we can reverse the operation and get his Net Construction Cost, which is $176,771. This represents the total unit cost applied to all the items. This figure first appears to be somewhere between the estimates of Mr. Lea and Mr. Adams as to Net Construction Cost, Mr. Lea's being $218,358 and Mr. Adams' $160,069. But it will be remembered, however, that the City and Mr. A. D. Adams claimed, throughout the suit, that in estimating the Company's Works Equipment, there should be excluded the East Lincoln District Holder and all equipment connected therewith, their contention being that this Holder and its equipment was installed primarily to supply consumers outside of the City of Lincoln, and therefore should not be included in estimating the value of the Company's property in the City of Lincoln. Consequently, Mr. A. D. Adams gave no estimate on the East Lincoln District Holder or its equipment, and said property was not included by him in making

up his Net Construction Cost; so that the only estimates given for this portion of the Company's Works Equipment were those presented by the Company's witnesses. The Master disagreed with the City's contention and included the Holder and its equipment in his estimate. His report shows that clearly, and he discusses why he does so. So that in the Master's Net Construction Cost estimate of $176,771 is included the value of the East Lincoln District Holder and its appurtenant equipment. On these items Mr. Lea gives the only Net Construction Cost estimate in evidence, which is as follows:

| | |
|---|---|
| 100,000 cu. ft. gas holder | $18,685.00 |
| Water piping | 177.00 |
| Gas yard mains | 463.00 |
| Manholes, etc. | 1,533.00 |
| 25 h. p. motor | 423.00 |
| 5 h. p. motor | 160.00 |
| No. 5 Sturtevant blower | 180.00 |
| No. 5 Sturtevant blower | 210.00 |
| Total | $21,831.00 |

(Transcript, p. 1370.)

If we deduct the total of these items from the Master's Net Construction Cost of $176,771 we get $154,940 as the Master's Net Construction Cost exclusive of the East Lincoln District Holder and equipment. Here, now, is a basis of comparison between the Master's Net Construction Cost and Mr. A. D. Adams' Net Construction Cost, the former's being $154,940 and the latter's, $160,069; that is, the Master's estimate is $5,129 lower than Mr. Adams' estimate. This result leads to the discovery of another absurdity in the Master's report, to wit, that he has used a Net Construction Cost estimate *lower than any introduced in evidence*. In other words, in spite of the irreconcilable clash between Mr. Lea's and Mr.

Adam's figures, Mr. Adams' being so much lower than Mr. Lea's, yet the Master adopts units of cost which gives him a Net Construction Cost lower even than Mr. Adams' by $5,129. We will go further in order to make clear our point. We will eliminate from consideration, for the moment, all equipment in the East Lincoln District except the 100,000 cubic feet Holder itself. The Net Construction Cost of this one item was given by Mr. Lea at $18,685, by Mr. Steinmueller at $18,000, and by the Company's records at $19,207.32. Take the lowest figures submitted in evidence for this one item—Mr. Steinmueller's of $18,000—and deduct it from the Master's Net Construction Cost, and we have $158,771, or approximately $2,000 below Mr. Adams' Net Construction Cost. This means that the Master has used lower cost units than any of the witnesses in this suit. And yet the Master says:

> "Upon every disputed item all the evidence, oral and written, which I have been able to find in the record, has been examined, considered and given in the decision reached its proper weight of influence" (Transcript, p. 40).

We unhesitatingly deny this statement. We insist, as we have said before, that the report convincingly shows that the Master *completely disregarded the evidence* in reaching his conclusions.

We will make still another computation to illustrate our contention that the Master's findings are not based on the evidence.

The Master's Reproduction Cost estimate for Works Equipment is $198,868, and his Present Value is $179,310. The Present Value, as we have explained before, is arrived at by deducting the Depreciation from the Reproduction Cost. Depreciation is estimated by considering the life, age and present condition of the equipment. The present condition when determined may be

expressed in terms of per cent., and was so expressed by Mr. Lea and Mr. A. D. Adams in their testimony. Mr. Lea's Reproduction Cost was $253,298 and his Present Value $196,759. Mr. A. D. Adams' Reproduction Cost was $171,274 and his Present Value $130,544. The Master's Reproduction Cost was $198,868 and his Present Value, $179,310. Mr. Lea based his Present Value estimate on an estimated present per cent. condition of 77.67 per cent.; Mr. A. D. Adams based his Present Value on an estimated present per cent. condition of 76.2 per cent.; the Master's figures show that his Present Value is based on a present per cent. condition of *90.17* per cent. This estimate is 12.50 points higher than the highest estimate in the record. On whose testimony did the Master rely when he made this estimate? What evidence, *given its proper weight of influence*, was reflected in that conclusion? The extent of the *irreconcilable* clash, between the testimony of Mr. Lea and Mr. A. D. Adams, as to the present per cent. condition of Works Equipment, represented exactly 1.47 points, whereas the Master's findings clashes with Mr. Lea's estimate to the extent of 12.50 points and with Mr. A. D. Adams' to the extent of 13.97 points.

Can there be any reasonable doubt that the Master ignored the evidence when framing his report?

The Master gives his findings as to the Present Value of each of the seventy-three items of Works Equipmnt, but he has not given his Net Construction Cost nor his Reproduction Cost of the respective items. His only figure for the Reproduction Cost is expressed as a total sum which we can not possibly subdivide for the purpose of analysis or criticism. We deem this matter of sufficient importance to set forth in a comparative statement all the estimates of the various witnesses and the findings of the Master such as are given. The table is as follows:

| | Master | Lea | Adams | Stein-mueller | Co. Costs |
|---|---|---|---|---|---|
| **Works Equipment—Total:** | | | | | |
| Net Construction Cost.. | $..... | $218,358 | $160,069 | ..... | ..... |

(Transcript, 40-2, 1370, 1719-45, 516-20.)

Here, again, will be noted the habitual practice on the part of the Master to pick a Present Value somewhere between the estimates of the opposing witnesses, though why he selects the figures he does is a question which only the Master can answer, and he expressly refuses so to do. It will be noted in comparing the figures in the above table that the great majority of the Present Values found are much nearer the estimates of Mr. A. D. Adams than those of the other witnesses. It seems to us that where the Master is rejecting the evidence of two experts (plus the records of the company on actual transactions) and reaches figures nearer the estimate of the third witness, we are entitled to know why the testimony of the two experts and the records of the company are disregarded. This is especially true where the *competency* of Mr. A. D. Adams as an expert was subject to such constant attack during the hearing, whereas the qualification of Mr. Steinmueller *were never questioned* by the City; nor was Mr. Lea's right to speak as an expert challenged or his experience in the gas business questioned, although his estimates were not accepted by the City. But we submit that where

the qualifications of one of the witnesses in this suit was so insistently assailed the Master should at least explain why said witness' estimates were deemed nearer the proper figure than the other estimates offered in evidence. And let us point out again that the Master, in reaching his conclusions as to Works Equipment has used a unit cost lower than Mr. Adams—the lowest in evidence—in calculating Net Construction Cost; but has thereupon faced about when he calculates a Present Value, and has adopted a present per cent. condition higher than Mr. Lea's—the highest in evidence. So that it is difficult to conclude what witness the Master did rely on in reaching his Present Value. We think we are entitled to an explanation of this situation.

**Distribution System.**

The Master opens this part of his report by giving his Net Construction Costs. This is the first time thus far in the report that the Master has seen fit to tell what his Net Construction Cost estimates are. We will set his conclusion down in a table in comparison with Mr. Lea's and Mr. A. D. Adams' Net Construction Cost estimates.

| | Master | Lea | Adams |
|---|---|---|---|
| Street Mains (exclusive of paving) | $173,700 | $179,814 | $130,913 |
| Services (exclusive of paving) | 76,116 | 111,689 | 69,939 |
| Service Boxes and Cocks | 9,000 | 11,068 | 2,472 |
| Service Governors | 18,950 | 19,902 | 13,365 |
| Meters | 60,500 | 63,444 | 56,592 |
| Distribution Tools | 6,210 | 6,210 | 6,210 |
| Street Main Drips | 1,113 | 1,113 | ..... |
| Street Main Valves | 328 | 328 | ..... |
| District Governor | 225 | 225 | ..... |
| Railway Crossings | 2,800 | 6,220 | ..... |
| Gas Appliances Loaned | 3,250 | 3,791 | ..... |
| Total Net Const. Cost (exc. of paving) | $352,192 | $403,804 | $279,491 |

(Transcript, pp. 43, 1372.)

It will be noted in this table that Mr. A. D. Adams gives no separate Net Construction Cost figures on the items Street Main Drips, Street Main Valves, District Governor, Railway Crossing and Gas Appliances Loaned, but Mr. Adams claimed that these items were included in his other Net Construction Cost figures on the Distribution System. Consequently, the only estimate given on these items as units were Mr. Lea's. On three of these items, to wit: Street Main Drips, Street Main Valves, and District Governor, the Master adopts the estimate of Mr. Lea. As to the other two items, to wit: Railway Crossings and Gas Appliances Loaned, the Master chooses figures under Mr. Lea's estimate (as to Railway Crossings approximately one-third of Mr. Lea's figure). Why the Master adopts Mr. Lea's estimate in some of the instances where Mr. Lea's was the only one in evidence and repudiates it in other instances where it was the only one in evidence, is quite incomprehensible to us.

The Master then attempts to explain some of his figures, and in so doing makes such an absurd statement that it is apparent that by this time he has become completely bewildered in his attempt to work out his conclusions. He said:

> "The difference between the total cost as fixed by me and the total cost according to Mr. Lea ($529,736), consists for the most part in the elimination from Mr. Lea's figures of three items, namely:
>
> "1. 3½ per cent excess overhead:
>
> "2. The cost of paving over mains and services, and
>
> "3. The cost of service pipes paid for by patrons of the Company." (Transcript, p. 43.)

Now the Master is here considering *Net Construction Costs*, and in naming his three reasons why he is lower

than Mr. Lea he states first that he had calculated *Overhead Charges* by using a rate 3½ per cent lower than Mr. Lea's. *But in estimating Net Construction Costs, Overhead Charges are not included at all.* This proposition is fundamental. It is only when one is estimating *Reproduction Cost* that one *adds the Overhead Charges* to the *Net Construction Cost.* Now this mistake of the Master is no mere inadvertent use of terms. There is no question that he was talking about Net Construction Costs, because he actually named Mr. Lea's estimate ($529,736), which he compares with his own, and both figures are Net Construction Cost estimates. How can we view this statement of the Master without concluding that he has completely lost his grasp of the situation, and that his figures can not be taken seriously?

He continues:

> "Adding the 12½ per cent Overhead Charge to the Net Construction Cost of $352,192, gives $396,216, the total Reproduction Cost of the Distribution System; and its depreciated value or Present Worth I find to be $351,624" (Transcript, p. 43).

The Master's Reproduction Cost being $396,216 and his Present Value being $351,624, we can, by using the calculations heretofore referred to, determine what he estimates as his present per cent condition. We find that it is 88.75 per cent, whereas Mr. Lea's figure was *79.32 per cent, and Mr. Adams' 74.72 per cent.* In other words, the Master's present per cent condition is 9.43 points higher than the highest estimate in the record.

We again respectfully submit our inquiry: Has the Master based his findings on the evidence?

The Master's findings on Net Construction Costs can be compared to Mr. Lea's rather briefly. The estimates of these costs are $352,192 by the Master as against $529,736 by Mr. Lea. The difference is $177,544. The

Master has expressly refused to allow for the cost of *Paving over Main and Services.* In this he rejected the contention of the Company and upheld the City's position. This elimination accounts for a difference of $125,932. The Master also refused to allow the Company credit for the proportionate value of services represented by the length of said services between the lot-line and the consumers' meters. Although the full length of these services had been installed by the Company, a certain amount, to wit, $30,484, had been collected from the consumers to defray part of the costs. If we deduct both the sums above mentioned as disallowed from the difference between the Master's and Mr. Lea's Net Construction Cost, we still have $21,128 unaccounted for.

The questions raised by the exclusion of these two items are questions of law, and are very serious matters. We will discuss them at length presently.

In the meanwhile we think it well to set forth in a table all of Mr. Lea's estimates on Distribution Systems as follows:

| | Net Constr. Cost | Reproduction Cost | Present Value |
|---|---|---|---|
| Street Mains | $179,814.00 | $208,583.00 | $173,061.00 |
| Passing Over Mains | 111,365.00 | 129,184.00 | 129,184.00 |
| Services | 111,689.00 | 129,559.00 | 99,851.00 |
| Service Boxes and Cocks | 11,068.00 | 12,839.00 | 9,886.00 |
| Paving Over Services | 14,567.00 | 16,898.00 | 13,107.00 |
| Service Governors | 19,902.00 | 23,086.00 | 20,157.00 |
| Meters | 63,444.00 | 73,595.00 | 53,515.00 |
| Distribution Tools | 6,210.00 | 7,204.00 | 5,259.00 |
| Street Main Drips | 1,113.00 | 1,291.00 | 1,046.00 |
| Street Main Valves | 328.00 | 380.00 | 308.00 |
| District Governor | 225.00 | 261.00 | 235.00 |
| Railway Crossings | 6,220.00 | 7,215.00 | 5,844.00 |
| Gas Appliances Loaned | 3,791.00 | 4,398.00 | 2,375.00 |

(Transcript, p. 1370.)

Mr. George L. Campen testified with respect to the Net Construction Cost of the gas mains, not including

the drips and valves (Transcript, p. 528, *et seq.*), and the Net Construction Cost of the Paving over the Street Mains. He gave the Net Construction Cost of Street Mains at $182,417.37 as against Mr. Lea's Net Construction Cost of $179,814 and Mr. A. D. Adams' Net Construction Cost of $130,913. Mr. Campen gave the Net Construction Cost for the Paving over Street Mains at $102,283.90, as against Mr. Lea's Net Construction Cost of $111,365, and Mr. A. D. Adams', $34,518. Mr. Campen gave the total Net Construction Cost for Street Mains, including specials, but not drips or valves, and for Paving over Mains, of $284,701.27, as against the corresponding item by Mr. Lea of $291,179, and of Mr. Adams, $165,431. Mr. Campen was within approximately 3 per cent of the Net Construction Cost as given by Mr. Lea for the Street Mains and Paving over Street Mains (Transcript, p 1801). Mr. Campen's qualifications to speak on the subject of costs for the construction of Street Mains and Street Paving, which he had heretofore considered, must be conceded. Mr. Campen's long experience in the city engineer's office of this city and in actual construction work here and elsewhere makes his testimony of particular importance and value. He has been a construction engineer for a long time, engaged in actual construction work, and knows the local conditions here, and we place his evidence before the Court in confirmation of Mr. Lea's judgment, asking that it be weighed against the testimony of Mr. A. D. Adams, who, without experience in this class of work, bases his claim to competency to speak at all upon the question of these costs on the ground that he has studied certain reports. In spite of the testimony of Mr. Lea and Mr. Campen, the Master saw fit to reduce their Net Construction Cost $21,128. His report is silent as to why he does so.

We will now consider the two questions raised by

the Master through his rejection of the Company's contention that the Master should have allowed in his Net Construction Cost of the Distribution System for the value of Paving over Mains and Services and for the total value of the Services, even though part of the cost of the installation of said Services had been collected from consumers.

*Paving Over Mains and Services.*

The Master gives his reasons for not allowing the above item, as follows:

> "That no allowance can be made in a rate case for the Reproduction Cost of paving over mains and service pipes seems now to be established by the clear weight of judicial and administrative authority. *Cedar Rapids Gas Light Company* v. *Cedar Rapids*, 134 Iowa 426 (correct citation, 144 Iowa 426); *Des Moines Gas Company* v. *City of Des Moines*, 199 Fed. 204; *People* v. *Willcox*, 104 N. E. (N. Y.), 911; *Whitten on Valuation of Public Service Corporations*, chap. VII.
>
> "The better reason, too, seems to be against such allowance. To permit a public service corporation to justify a rate claimed to be excessive by pointing to a costly street improvement made by the public at its own expense hardly accords with good sense. The public would be reluctant to make such improvements if they result not only in increasing taxation, but an increase of gas and water rates as well" (Transcript, p. 43).

The City of Lincoln, through its witness Mr. A. D. Adams, presented but one valuation in this case, and stated conclusively and unequivocally that the estimate was based on the present value of the property, determined by calculating the cost *to reproduce it new*, less depreciation (Transcript, pp. 1113-14). The City insists that its calculations of Present Value were based on the reproduction theory—that is, the cost of reproducing the

entire property just as it stands now—not by substituting another gas plant of equal efficiency, but by completely rebuilding the present outfit as it exists. This also was the method of valuation adopted by the Company's witnesses; so that all parties were agreed as far as the method estimating value was concerned. They all used the reproduction method. It was for this reason that Mr. A. D. Adams refused to be influenced by the Company's records as to what sums in cash had been actually invested in various items of property. He said in substance that he was not trying to figure the actual investment of the Company, but what was the Present Value of the plant, based on the cost to *reproduce* it, less depreciation. It was for this reason that he sought to justify some of his figures, when there was a serious conflict between his estimate of values and the sums which the Company had paid in very recent years for equipment, his explanation being that he was figuring on reproducing the plant as a single job, whereas the Company's records merely proved the cost of piece-meal construction. The City insisted that by re-reproducing the property as one construction job there would be a material saving in the cost than if construction was spread over several years; and the City claimed to be entitled to that difference (Transcript, pp. 1113-14). The City throughout the hearings pressed the point that it was figuring on reproduction at the present time, and as quickly as possible from a given date. It is true, of course, that piece-meal construction would cost more. In the Wisconsin case, *State Journal Printing Company* v. *Madison Gas & Electric Light Company*, 4 W. R. C. R. 546, it was estimated that piece-meal construction would cost 15 per cent more than construction as a single job. The Company admits this proposition, and all the Company's estimates were based on the theory of continuous construction so as to necessi-

tate the lowest possible cost. The City claimed the benefit of the estimated 15 per cent saving by this method of construction, and the Company was willing to accede the point.

But in spite of the City's protestation as to its having adopted the reproduction method of valuation, nevertheless whenever a point arose whereby it appeared that the City might work out a reduction in value by abandoning the reproduction theory, said theory was brushed aside by the City's witness with very little ceremony. One of these instances was the question of Paving over Mains and Services. Other instances were cases where the City sought to substitute a value based on the installation of more modern but less expensive equipment than the Company owned. But the Master stood firm for the reproduction theory of valuation. He said at the beginning of his report:

> "The contention has been made on behalf of the City that there are a number of plant items which ought not to be valued on the basis of reproduction cost, but on the basis of the cost new of more modern and equally efficient substitutes of a different type. I have not adopted this view, but have instead valued all such items as they actually exist. The property whose valuation is here involved is, of course, the aggregation of things owned by the Company and used by it in serving the public. Rates should therefore, it seems to me, be based upon the values of those things rather than upon the value of other things performing like functions with equal or greater efficiency" (Transcript, p. 37).

At the outset, therefore, both parties were agreed on the reproduction method of valuation, and the City only abandoned that theory when it thought it would work out some advantage. The Master adopts the reproduction method in his valuation and has, as we have pointed out, frequently ignored the Company's actual cost of a

piece of equipment substituting a lower figure in making his estimate. But the Master, too, abandons the reproduction theory when it comes to Paving over Mains and Services. Now for the first time in his report he seems to be concerned with *actual investments*, whereas in valuing the rest of the equipment the Company's records as to actual investment seemed to be of small consequence.

The City's witness, Mr. A. D. Adams, admitted that, in logically applying the reproduction method of valuation, there was no escaping the conclusion that the cost of paving subsequently laid had to be included in the valuation of services and mains (Transcript, pp. 1127, 900). As a result he placed an estimate of $34,518 as the additional net construction cost of the mains by reason of the paving over them. But it is interesting to note how he worked out this valuation. He insisted that if he were reproducing the distribution system he would lay the majority of the mains in the parkways of the streets, where there is no paving, and thus avoid the cost of breaking through the pavement to lay the mains (Transcript, p. 1123). He used this method of valuation in spite of the city ordinance compelling the laying of the mains in the middle of the street. Not only is his method of valuation in direct conflict with the city ordinance, but it cannot in any sense of the word be called a reproduction method of valuation. There is no question but that if the Company is to have some of its values reduced by employing the reproduction method of valuing, that it is entitled to a consistent application of that method and that all estimates should be based upon the cost of reproducing the property *as it now stands*.

There can be no question about the proposition that the City and the Master, once having adopted the method of valuing, should consistently apply that method throughout the case, and not abandon it when it ap-

pears to be an occasion where such methods would work out an increase in value for the Company. In all fairness the Master should not strip the Company of values by repudiating its cost of equipment on the ground that it represented piece-meal construction, and therefore was inconsistent with the reproduction theory of valuing, and then refuse the Company the value of Paving over Mains and Services because the Company *had* constructed piece-meal, and therefore laid a good part of its mains and services before the pavements were laid down.

The Master cites four authorities to uphold his decision. We contend, and will endeavor to point out, that they are not authorities at all for the proposition for which they are cited.

The first case is the *Cedar Rapids Gas Light Company* v. *Cedar Rapids*, 144 Iowa, 426. A consideration of that case shows at once that the Court expressly repudiated the reproduction method of valuation. Ladd, J., said in part.

> "The contention illustrates how inequitable would be a rule arbitrarily fixing the value as that for which a system might be replaced. Aside from this being impractical it may safely be said that there is hardly an enterprise of this character, which, were it destroyed, would be restored as it was before. *In ascertaining values in this way, the worth of a new plant of equal capacity, efficiency, and durability, with proper discount for defects in the old and depreciation for use, should be the measure of value rather than the cost of exact duplication.*"

It is clear that the Court rejects the reproduction method of valuation, so that the above decision has no bearing on a case where the value is determined by all parties upon the basis of reproduction cost.

So, too, in the Des Moines Gas Company case, 199 Fed. 204, there is no question that the cost is not esti-

mated by the reproduction method. In fact, Smith McPherson, D. J., uses rather caustic language in criticising the use of this method at all; so if we are to be guided by him remarks in this case we must conclude that we all have been wasting time during these hearings. He says (pp. 207-8):

> "One of these is what is called the 'reproduction theory' as determining the present value. * * *
>
> "In my opinion, those who maintain that what it will cost to reproduce the plant, less depreciation, is the true value, in many instances confound the real question with one of many evidences of the real value. Reproducing cost is an evidence of what the real value is after subtracting the depreciation. *But what is to be done with the value of stocks and bonds on the reproductive theory? And what becomes of the original cost on the reproduction theory? And what becomes of the question of the increase or falling off in numbers of consumers? And the same as to increased or diminished expenses?*
>
> "The theory at first thought in all cases is plausible and attractive, but in the end oftentimes utterly illogical and unreliable, originally *adopted as a mere time-saver by mere theorists, and sought to be enforced as against substantial and unbending facts.* If the plant is to be reproduced, when is it to be done? If, when reproduced, will the streets then be paved, and, if paved, paved with what? *Must it all be reproduced at once, or the same covered by a number of years? If but gradually reproduced, why should not such cost go into either the operating or maintenance accounts?* No one can state when it must be reproduced, and a material question arises: What then, as compared with the present, will be the price of labor, material and freight? * * *
>
> "There are many instances in which the reproduction theory is the best of all methods for getting at the present value, and in other instances the most misleading."

It is evident that the reproduction method of valuing was not approved of at all by the Court in that case, and therefore the case is not in point. But in spite of the above quoted remarks of Smith McPherson, J., in the Des Moines Gas case (decided August, 1912), the same learned Judge used the following language in the Des Moines Water case, 192 Fed., 193 (decided September, 1911) (p. 197):

> "The Master has made one finding that has been the subject of more discussion, perhaps, than any other item in the case. He finds that there are practically 38 miles of pipes that were laid in the streets at a time when the streets had not been paved, but that since the laying of those 38 miles of pipe the streets have been paved. To reproduce the same would require an expenditure of from $108,896, as admitted by the City, to $210,000, as claimed by the Waterworks Company, more than would be necessary to expend to lay such pipes in unpaved streets. Whatever the true sum is, the Waterworks Company claims such sum to be a part of the value of the plant. This proposition the city denies. But it is not pivotal in this case. Much can be said on each side of the question. *This case seems to have been tried before the Master, by both parties, upon the reproduction theory; that is to say, what this plant would cost if it were blotted out of existence, and the City, or some other company, were to undertake to reproduce the plant.* In such an event, as of course, the pipes must be laid under these 38 miles of paved streets at this additional cost. Looking at the question in that light, the question is, What would it cost to-day to reproduce the plant? and from which, to get at the value of the present plant, there would be deducted the value of depreciation, either by functional or physical depreciation."

The Court came to no conclusion on this point, but this much is clear: That although Smith McPherson, D. J., criticises the reproduction theory as a test for

valuation, he at least recognizes that to be consistent there is no escape from the conclusion that the cost of Paving over Mains should be allowed.

Whitten, in his work on Valuation of Public Service Corporations, cites some of the authorities on this point, and admits a conflict, with the Federal authorities favoring the allowance of Paving over Mains.

So, of the authorities cited by the Master, those above considered can scarcely be said to uphold his contention, which, he says, "is established by the clear weight of judicial and administrative authority."

The other case cited by the Master, *People* v. *Willcox*, 210 N. Y., 479, is the only one which supports him, and that case is not binding on this Court, and is opposed to the rule as laid down by the Federal decisions. Furthermore, we submit that the remarks of Miller, J., in that case on the question of Repaving over Mains are not well considered or sound in principle. After discussing the contentions of both sides, Miller, J., says (p. 495):

> "The cost of reproduction, less accrued depreciation, rule seems to be the one generally employed in rate cases. But it is merely a rule of convenience and must be applied with reason. *On the one hand it should not be so applied as to deprive the corporation of a fair return at all times on the reasonable, proper and necessary investment made by it to serve the public,* and on the other hand it should not be so applied as to give the corporation a return on improvements made at public expense which in no way increase the cost to it of performing that service."

Now we have already pointed out that the reproduction method of valuation has been applied by the City and by the Master "as to deprive the corporation of a fair return at all times on the reasonable, proper and necessary investment made by it to serve the public,"

because the Master continually ignored the records of the Company as to its actual investment for various items of equipment, and based his conclusions on an estimated cost of reproduction which in each case was lower than the actual investment. And the City insistently repudiated the Company's records as measures of value on the ground that they represented piece-meal construction, whereas the City figured on reproduction cost on a single job. So if the cost of reproduction rule is going to be used against the Company in depreciating values we insist that justice demands an application of that rule in our favor where the occasion presents itself.

The Company maintains, and is prepared to show, that the Federal authorities on this point uphold its contention as to the propriety of including values of Paving over Mains in estimating reproduction cost.

In the Minnesota Rate Cases, 230 U. S., 352, one of the latest and greatest decisions of the United States Supreme Court on the subject of rates, Mr. Justice Hughes said, p. 454:

> "It is clear that in ascertaining the Present Value we are not limited to the consideration of the amount of the actual investment. If that has been reckless or improvident, losses may be sustained which the community does not underwrite. As the Company may not be protected in its actual investment, if the value of its property be plainly less, so the making of a just return for the use of the property involves the recognition of its fair value if it be more than its cost. The property is held in private ownership and it is that property, and not the original cost of it, of which the owner may not be deprived without due process of law."

It is thus the recognized rule of the U. S. Supreme Court that appreciation in value must be taken into account as well as depreciation. The determination of

the validity of the claim for the cost of repaving rests upon this fundamental basis.

This item was allowed in the case of *Willcox* v. *Consolidated Gas Company*, 212 U. S., 19. It was argued by counsel for the City that the cost of the paving over the mains where the Company had laid its mains in advance of the paving, and so did not incur the expense, was excluded in the Willcox case and the late case from the New York Court of Appeals, *People ex rel.* v. *Willcox et al.*, 210 N. Y., 479, was cited in support of this contention. We contended on the argument that the item for the cost of the paving, whether laid prior or subsequent to the laying of the mains, was included in the valuation of the property in the Willcox case, and that the record in that case disclosed that fact and the issue upon that question. Since the argument we have assembled the proofs in support of our position on that point.

In the Master's report in the Willcox case (original, p. 269; reprint, p. 177 of record), the Master used the following language:

> "The fact that reproduction cost is so greatly in excess of the cost of original construction is due largely to changes in the character of the city's pavements. Formerly when the gas companies had occasion to open the streets for the purpose of laying new mains or repairing old mains or services, it was their custom to replace the pavement at a cost of from 15 to 25 cents per square yard. Now about 88 per cent. of the streets are covered with new styles of pavement, chiefly asphalt. The gas companies are permitted to open the streets only on condition that the pavements shall be relaid by the contractors for asphalt paving. The expense of this work is paid by the gas companies and amounts to from $2.70 to $7.00 per yard, the latter price being for pavement on Broadway. Pavements consisting of granite blocks on concrete are replaced by the

city's employes, and for this work the complainant is charged $8.00 for the first square yard and $4.00 for each additional yard.

"Another source of additional cost is the congested condition of the sub-surface of the streets, in view of the multiplication in recent years of various forms of underground construction. In addition to sewer and water mains there are now conduits for electric light, telephone and telegraph wires, underground trolley ducts and salt water mains, besides, in certain streets, the elevated railroad columns, and structures of the rapid transit railway. The result is that in many streets the entire subsurface is so filled with these structures that the replacement or repairing of existing mains is attended with great difficulty and consequent expense. Taking the testimony on this subject as a whole, the preponderance of evidence is very clearly with the complainant, and its estimate of the replacement value of the mains may be taken as reasonable."

To this finding of the Master in the Willcox case, the city of New York proposed the following amendments:

"In allowing a replacement value on mains at $12,636,000 as against the cost on the books for $7,852,000, the Master has awarded the value of pavements $4,784,000 to the Consolidated Gas Company, although when pavements are laid, they are laid at a cost to the property holders of New York City, and at no cost to the Gas Company. • • •

"Pavements: When the City of New York paved over the existing mains of the Consolidated Gas Company (according to the graphic valuations given in the City's Exhibit '50' by Mr. Marks), it expended for pavements:

| | |
|---|---|
| "Over street mains..... | $4,784,000 |
| "Over house services.... | 766,068 |
| "Making a total of.... | $5,550,068 |

"The Consolidated Gas Company has paid nothing for this, but the Master has added it to the com-

pany's possessions" (Original, pp. 450-1; Reprint, pp. 301-2).

This proposed amendment was not allowed.

To the finding of the Master the Attorney General of the State of New York excepted, as follows:

"Twenty-fifth.—These defendants further except to the said finding that $12,636,000 is the value of the mains upon which the complainant is entitled to earn a return, whereas the evidence shows that the same were carried on the books of the company at the sum of $7,852,000, and that in said finding the Master has allowed $4,784,000 as an estimated increase of cost to relay all the mains of the said company by reason of the changes in the pavements of the streets of the City, and that the same represents no outlay on the part of the company" (Original, p. 497; Reprint, p. 330).

And the City of New York filed the following exceptions:

"Eighteenth Exception.—For that the said Master in his report on pages 38, 39 and 40, has found the value of the mains of the complainant on which it is entitled to a return as against the consumer, to be the replacement value based on the cost of reproduction of the same."

"Whereas said Master should have found said value of the mains to be the actual cost of investment therein by the complainant, less the depreciation, as the only fair basis between the complainant and the consumer, otherwise the consumer is charged with the burden of providing a return on an amount in excess of the actual investment of the complainant due to increased cost resulting from modern conditions, pavement, etc., without the consumer receiving the benefits which replacements, at the present time, under the present conditions, would give. That in no sense can the mains of the complainant, many of which have been in the ground for fifty years, be said to be at the present time of a greater value than the actual cost, merely

because modern conditions would not permit duplication of such identical mains at the same cost at the present time" (Original, p. 546; Reprint, p. 360).

"Twenty-third exception.—For that the said Master on pages 41 and 139 has fixed the value of the services on which the complainant is entitled to a return at $1,994,000, that such amount is based on the cost of reproduction and is excessive in that it capitalizes pavements and allows no depreciation; that the complainant has claimed such services depreciate to the extent of 25 per cent. (p. 99 of report); that the proper present valuation is the cost less depreciation, and such value does not exceed $1,222,228.37, as shown on the books on December 31, 1905" (Original, p. 548; Reprint, p. 361).

But nevertheless, when the Master's report came before Hough, J., it was sustained (157 Fed., 849). He said:

"As to the realty, the values assigned are those of the time of inquiry; not cost when the land was acquired for the purposes of manufacture, and not the cost to the complainant of so much as it acquired when organized in 1884, as a consolidation of several other gas manufacturing corporations.

"It is objected that such method of appraisement seeks to confer upon complainant the legal right of earning a fair return upon land values which represent no original investment by it, does not indicate land especially appropriate for the manufacture of gas, and increases apparent assets without increasing earning power. Analogous questions arise as to plant, mains, services, and meters; the reported values, whereof are the reproductive cost less depreciation, and not original cost to the complainant or its predecessors" (854).

"I think the method of valuation applied by the report to land, plant, mains, services, and meters lawful. (856) * * *

"It results, from these findings, that the value, as of the time of the beginning of this suit, of complainant's tangible property, invested in and representing the business sought to be regulated by the statutes and order in question, is as follows:

| | |
|---|---|
| Real Estate | $11,155,845 |
| Plants | 15,500,000 |
| Mains | 12,636,000 |
| Services | 1,994,000 |
| Meters and Miscellaneous | 4,100,000 |
| Working Capital | 1,616,000 |
| Total of tangible assets | $47,001,845" |

(861)

In the appeal to the Supreme Court of the United States in the twentieth assignment of error on the part of the City of New York, it is alleged:

> "*Twentieth.*—In sustaining the report of said Master in Chancery finding the value of the mains of the complainant on which it is entitled to a return as against the consumer, to be the replacement value based on the cost of reproduction of the same, whereas said Master should have found said value of the mains to be the actual cost of investment therein by the complainant, less the depreciation."

There is no question that the issue raised by the cost of paving over mains came before the Supreme Court of the United States on appeal and was passed upon by that court. These issues were properly presented by exceptions and were urged and discussed by counsel in their briefs and by the Court and counsel in oral arguments. In order not to encumber this case with lengthy quotations from the brief in the Consolidated Gas case, we beg to refer to these briefs and transcripts of oral arguments in the Consolidated Gas case, in order to point out to the Court that this question of paving over mains was actually before the Supreme Court and was covered by its decisions.

The Supreme Court of the United States on the appeal (212 U. S., 19) approved the method employed in determining the value of the tangible property of the company, and say:

"Altering the finding of the Court so far only as to place the value of the franchises at the time agreed upon in 1884, $7,781,000, the total value upon that basis of the property employed by the company would be $55,612,435" (48).

"And we concur with the Court below in holding that the value of the property is to be determined as of the time when the inquiry is made regarding the rates. If the property, which legally enters into the consideration of the question of rates, has increased in value since it was acquired, the company is entitled to the benefit of such increase" (52).

The Federal Court in the decision in the Willcox-Consolidated Gas case, 157 Fed., determined the present value of the company's property by determining the reproduction cost new less depreciation, and included in the value of the mains and services the cost to reconstruct those mains and services under the conditions then existing, and by that process increased the value of the mains and services over the actual cost to the company more than $5,500,000, and the method of determining that valuation was approved by the Supreme Court of the United States on the appeal.

*In re* Appleton Water Works Company, 6 W. R. C. R., 97, the Commission says:

"It is contended on the part of the company that the Commission erred in disallowing the estimated cost of laying mains and services in streets which are now paved, but which were not paved at the time such mains and services were laid (121).

"It was not the intention in such consideration of the subject to deny that the cost of reproducing the plant new, under the existing conditions, should include such estimated cost, but the inquiry was there directed more particularly to ascertaining the cost of reproducing the plant new in the manner of its actual construction. * * * For the purpose of the present inquiry it is conceded that the cost of

reproduction new, including the item of paving, must be regarded as an evidentiary fact in reaching a final conclusion, and it may be added that in no case, either for rate-making purposes or otherwise, has the Commission ever omitted from consideration the item of paving in ascertaining the cost of the reproduction new" (122).

Where there is no issue as to the plant being overbuilt or improvidently built, then the present value of the plant is the basis of valuation and the present value of the plant in such cases and under such circumstances is determined by the reproduction cost new less depreciation. *City of Knoxville* v. *Knoxville Water Co.*, 212 U. S., 1.

The question of the propriety of including in the value of mains the cost of removing and replacing pavement subsequently laid over mains arose in a recent case in the United States District Court of the Northern District of California, Second Division. The case is *Pacific Gas & Electric Company* v. *City and County of San Francisco*. The taking of testimony in this case has been referred to a Master, who has filed his report, but said report has not as yet come before the Court for consideration. The Master in that case treats at some length the question of mains under pavement subsequently laid. He states concisely the reasons advanced by the City of San Francisco why this item of value should not be allowed, as follows:

(1) It (the paving) does not represent property of the company;

(2) It does not represent investment of the company;

(3) It is taxing the rate-payer twice, once for the cast of installing pavement and second in the gas rate;

(4) It is misapplying reproduction theory.

He states that the objections of the City as quoted are identical with those of Commissioner Maltbie of New York Public Service Commission, First District, which were advanced in the case of *People* v. *Willcox*, *supra*.

He considers the Cedar Rapids case and dismisses the opinion of Smith McPherson, J., as not convincing, because the Court there had adopted as the measure of value the cost of a substitute plant, a test which the Master in that case rejects.

He then takes up the objections separately and comments on them. As to objection No. 3 above quoted, he says:

> "The point is made first that if subsequent paving over mains is included in the valuation of those mains, the consumer is in effect taxed twice, once for the paving and again indirectly in an increased gas rate. But this would be the case if the company was established and the mains laid after the paving was done; so that is not an essential objection, if objections properly exist."

As to objection No. 1, that the paving does not represent property of the company, he says:

> "In the second place it is urged that the item should be excluded *because the paving is not owned by the company;* but this misses the point, since no claim of that sort would be made, the gas company's contention being that the *pipe*, which admittedly it owns, is worth more by reason of its location, in the same way that its lands have appreciated in value, by reason of location with reference to the growing community around it. The error of dwelling on the ownership of the pavement itself pervades the whole opinion."

As to the objections that the paving does not represent an investment of the company, he says:

> "Finally, Commissioner Maltbie (and counsel

here), adds as a reason for disallowing that the subsequent paving represents no expenditure or investment on the part of the public service company. This is a logical objection and presents the essence of the decision."

Then he proceeds to consider that objection and considers authorities on the methods of arriving at present value, and concludes that the two theories of valuing a property, one by ascertaining the present value through reproduction, and the other by determining the actual investment, can not logically be applied in the same case. He says:

"We must, in truth, face the fact that present value is one standard of valuation and actual investment is another and quite different standard of valuation. Of course, using the latter standard, we should omit such an item as subsequent paving. * * *

* * * * * *

"The theories come sharply into conflict on this question of paving over mains. The question is, which theory is settled by authority? It will not do for a rate-fixing body or a court to apply cost-of-reproduction where it leads to reduced rates, and to abandon it where it leads to advanced rates. Consistency is essential to justice. It is not at all impossible that the situation as regards paving over mains might be reversed; that mains might originally be laid under asphalt and concrete, and in the course of years improvement in the paving might lead to replacement with pavement of equal or greater efficiency at largely reduced cost. In neither case would the *pavement* belong to the utility. But in the valuing the company's mains would we apply actual investment and thus prescribe high rates, or cost of reproduction, implying reduced rates to the consumers?"

* * * * * *

"Enough has been said to show that 'present value' is not equivalent to 'investment,' 'original

> cost.' I can, at this time, think of no better method to determine present value (market value being eliminated), than the method of cost-of-reproduction less accrued depreciation. If this is not actually established in law as the proper method, it certainly represents the trend of the decisions."

He concludes:

> "I conclude, therefore, both on reason and authority, that the City's claim of deduction of $644,000 for the item of paving over mains, must be disapproved."

We submit that the Master in the Lincoln Gas case was in error when he refused to allow the value of $146,682 as a part of the Reproduction Cost of the Mains and Services. This is a considerable sum, and the Company demands that it should be included in the value of its property. The Master says that "To permit a public service corporation to justify a rate claimed to be excessive by pointing to a costly street improvement made by the public at its own expense, hardly accords with good sense." From this we must conclude that the Master believes it "accords with good sense" to apply the reproduction method of valuation only where such method would succeed in reducing the value of the company's property, and to abandon such methods where the contrary might be the case. We submit that it better accords with good sense and good justice to adopt a method of valuation which is applied consistently throughout the case, and not one which may be employed or ignored, as the Master, in the exercise of his discretion, deems expedient.

On the question of the cost of pavement subsequently laid over mains, there was considerable testimony introduced by the Company and by the City. The net result in dollars between the estimates of the City and the company's witnesses is explained to a considerable

extent by the fact that the City sought to reduce the cost by the theory that in reproducing the Company's property they would save expense by laying mains in the part of the streets known as the "park-ways" instead of under the paved portions of the streets where the mains now are (Transcript, p. 1123).

The ordinance of the City was introduced showing in effect that the gas mains were required to be laid by the Company out in the paved portion of the street, and Mr. George L. Campen, former city engineer, testified that the Company is required to secure a permit for the laying of gas mains, and that the engineering department of the City required the mains to be laid out in the streets so that the mains would be under the paved portion of the street. The position taken by the witness for the City was in effect that he would expect to get the law changed in this respect, and would expect to get permission to lay the mains back in the parkway. Mr. Campen testified that the water department of the City as well as the Gas Company was required to lay its mains out in the paved portion of the streets. The evidence shows that the parkways are plotted and planted with grass, shrubbery and trees, and generally stand up several feet above the paved portion of the street. The evidence shows that the construction of the gas mains in the parkway would be injurious to the trees and shrubbery and in the case of escaping gas from the mains would result in the killing of the trees and shrubbery, and shows that it would be impracticable from an engineering standpoint to place a single main on one side of the street back in the parkway, with the expectation of being able to serve both sides of the street; that there would be additional cost in sinking the mains deep enough in the parkway to carry the services from the main across the street under the paving to tenements on the opposite side of the street or an additional cost

in installing drip pots with each service crossing the streets from the main; that with such additional cost in order to get back into the parkway you would still have to cross the paved intersection of the street with the mains in each block; that practically the paved intersection of the street is equal to one-fourth of the distance across the block, so saving could only accrue the three-fourths in getting back into the parkway. The City presented no computation on the additional cost in placing the mains back in the parkway, and presented no denfiite assurance that the law would be changed to permit it. In this situation, even if his theory were admitted, there is no basis in the record for a valuation of the mains and services except as they are now located.

Mr. Lea's Exhibit "425," subdivision "E" (Transcript, p. 1372), shows the total number of feet of mains under paving to be 190,037, and the City's witness, figuring on the parkway, shows the length of mains under paving to be 68,978 feet, or a saving of 121,459 feet, made up as follows:

Mr. Lea shows 1,740 feet of 1¼-inch mains under paving, and for this amount A. D. Adams, in the reproduction of the property by placing the mains back in the parkway, would show 348 feet under paving. Mr. Lea shows 97,519 feet of 2-inch main under paving and A. D. Adams shows 19,176 feet, or a difference of 78,343 feet. Mr. Lea shows 406 feet of 3-inch main under paving; A. D. Adams by his method shows 81 feet under paving. Mr. Lea shows 61,023 feet of 4-inch mains under paving, and A. D. Adams shows 19,648 feet under paving, or a difference of 41,375 feet. Mr. Lea shows the net construction cost of the paving over the mains to be $111,365, and A. D. Adams by his method for reproduction of the property shows a net construction cost for paving over mains of $34,518. So the difference

in dollars due alone to the method employed by A. D. Adams in placing the mains back in the parkway is $76,847. This is a substantial sum, and it may be well to inquire if there is any authority or precedent justifying the method employed by the City. It seems fundamental in determining the present value of this property by the reproduction cost less depreciation, that you would be compelled to reproduce this property located and situated as it is and not substitute for it some other kinds of property, or property in some other situation. You cannot measure the present value of this property by determining a value of property which in the judgment of the witness may be the equivalent. It is this particular property, situated as it is, that is to be valued, and the reproducion cost of it as situated is accepted as the measure of its present value after deducting depreciation. If the City may place the mains back in the parkway, which the City did not permit the Company to do, and in that way make a saving in cost, then the City might substitute different sizes and kinds of mains, and might work a saving in the reproduction cost of a distribution system equivalent in capacity and service to the one in question. If such a basis were permitted then the Court would have to deal not only with the question of values but with the engineering questions as to whether the proposed substitute was practical or the equivalent, and the engineering problems and opinions upon that subject would probably be more at variance than opinion evidence on value alone. The courts have been careful to restrict the inquiry to the question of the reproduction cost of the present property and have not permitted engineers to speculate on what they would regard as the equivalent. This would seem especially appropriate where the engineer for the city is without experience and his advice limited to a study of statistics.

In the Willcox-Consolidated Gas Company Case, 157 Fed., 849, the Court in considering the proper method of valuation, say:

> "In every instance, however, the value assigned in the report is what it would cost presently to reproduce each item of property, in its present condition, and capable of giving service neither better nor worse than it now does. As to all of the items enumerated, therefore, from real estate to meters, inclusive, the complainant demands a fair return upon the reproductive value thereof, which is the same thing as the present value properly considered" (854).

This method of valuation and of determining the present value of the property was approved by the Supreme Court of the United States on the appeal in this case.

*Kennebec Water District* v. *City of Waterville,* 97 Me., 185:

> "To enter upon a comparison of the merits of different systems—to compare this one with more modern systems—would be to open a wide door to speculative inquiry, and leads to discussion not germane to the subject. It is this system that is to be appraised in its present condition and with its present efficiency."

To the same effect *Brunswick & T. Water Dist.* v. *Maine Water Company,* 99 Me., 371.

*Amount of Cost of Service Pipes Collected from Consumers.*

In his findings as to the value of Service Pipes, the Master eliminated the sum of $30,484, which is the sum collected by the Company from the consumers to defray part of the expense of installing said service. His reasons for so doing are expressed in his report, as follows:

"Whether the reason for excluding the cost of pavement over mains from the valuation requires also the exclusion of the cost of service pipes paid for by the gas consumers, has not, to my knowledge, been adjudicated; but the governing principle is, it seems to me, as applicable in one case as in the other." * * *

"Of course, in valuing a utility, no distinction can be made between property acquired by purchase and property acquired by gift or otherwise. The value of whatever the company owns and devotes to that public service regardless of the means or method of acquisition is a just and proper standard by which to measure reasonable rates. But it can not, I think, be said, looking at the matter broadly, hat the Company is the owner either technically or equitably of the service pipes. It bought and put them in, it is true, but when it was reimbursed by its patrons for the cost, can it be supposed that it still intended to retain title and the right to remove them at pleasure? A more reasonable inference is that in every case both parties to the transaction regarded the pipes when paid for as belonging to the owner of the tenement with the right on his part to use them if so inclined in connection with a service furnished by a rival company or for any other purpose, even though entirely unrelated to the gas business. They can not, it seems to me, consistently with the principle above stated by Justice Harlan, constitute in part the basis for a rate that can be regarded as entirely fair to the public. The gas consumers have paid $30.484 of the amount claimed by the company for putting in service pipes, and this item I have eliminated from the valuation" (Transcript, pp. 43-4).

This is another important item in dispute. The comparatively small portion of the total cost of putting in these services that has been collected from the property owners is shown in Exhibit "89," (Transcript, p. 1826), and is shown to be in the amount of $30,484.43. In the main the costs were borne by the Company, however,

and the services constitute an essential part of the distribution plant. The net construction cost for the services, exclusive of pavement as shown by Mr. Lea, is $111,689, and as shown by A. D. Adams is $69,939.39.

The Net Construction Cost, as found by the Master, is $76,116. The difference between the Master's findings and Mr. Lea's estimate is $35,573, of which $30,484 is accounted for by the Master's refusal to allow, in the value of the Services, the amount repaid by customers.

At this point we shall only consider the claim of the company that it is entitled to have considered here a fair valuation of all of the property used by the Company in the service of the public.

The Court will find it necessary to discard the petty contention of the City, that because these services are laid in private grounds, in part at least, they must be treated as he private property of the consumer, and regarded as a gift or gratuity bestowed by the Company for which it can claim no compensation. Mr. Justice Brewer once answered such a contention, as follows, in *National Water Works* v. *Kansas City*, 62 Fed., 853, 865:

> "The fact that it is a system in operation, not only with a capacity to supply the City, but actually supplying many buildings in the City—not only with a capacity to earn, but actually earning—makes it true that 'the fair and equitable value' is something in excess of the cost of reproduction. The fact that the company does not own the connections between the pipes in the streets and the buildings—such connections being the property of the individual property owners—does not militate against the proposition last stated, for who would care to buy, or at least give a large price for, a waterworks system without a single connection between the pipes in the streets and the buildings adjacent. Such a system would be a dead structure, rather than a living and going business. The additional value created by the fact of many connections with buildings, with ac-

> tual supply and actual earnings, is not represented by the mere cost of making such connections. Such connections are not compulsory, but depend upon the will of the property owners, and are secured only by efforts on the part of the owners of the waterworks, and inducements held out therefor."

The company cannot compel any property owner to lay a service into his house. Neither can the property owner tap the Company's mains. In a sense the pipe imbedded in the private ground and tenement of the consumer may be regarded as private property, just as is the main in the street the property of the company. It is the connection which joins the private service with the Company's main that makes the distributing plant useful. The service which extends into the private tenement is an indispensable part of the Company's distribution system. The drop and the instrument extending into the private tenements are essential parts of the local telephone system. In both cases the equipment installed in private tenements are universally regarded as parts of the utility equipment.

The Gas Company has borne the cost of installation of these services, including the pipe connections to gas stoves and ranges. The money was prudently expended, and is used in giving the public service. It was a public duty of the Company to properly stimulate the sale of the utility's product, and to do so was essential to its profitable operation. From whatever angle the situation is viewed, the services and connections must be valued as a part of the Company's property on which it is entitled to a full return.

The issue here so far as it respects the $30,484 contributed by certain consumers for gas services is not an issue of ownership of property. The services throughout are a part and portion of the distribution system

and are a part and portion of the property being used in the public service. The ownership of that property is not the issue and is unimportant in the matter of valuing the property. There is to be a fair valuation upon all of the property used and useful in the manufacture and sale of gas. If a portion of the consumers have contributed $30,484 towards the construction of the services the public cannot claim the benefit of that investment and cannot claim that that property shall not be valued here as a part of the distribution system. To do so would be to deny any return upon that investment, and give to the public a benefit of that reduction in value without compensation. If these services to the extent of $30,484 have been paid for by certain consumers, then those certain consumers who made that contribution are entitled to look to the Company for an adjustment by reason thereof and it is no concern of the general public. The public or the City in this proceeding is in no position to say that the investment in these services to the extent indicated and contributed by the private consumer shall be a gratuity to the public and the use thereof shall be uncompensated. Those investments in the services which constitute a part and an essential part of the distribution system are to be valued as a part of the property which is to furnish this service. The ownership or the question of payment for the property of the company is not an issue. The situation, however, with respect to these particular services might call for an adjustment by the company with those who contributed the money, but such adjustment could not accrue to the benefit of one who made no such payment.

The authorities heretofore cited are to the effect that in the valuation of the property the Courts or Commissions do not inquire into the manner in which the property of the utility corporation, devoted to the public use,

was obtained, whether by purchase, inheritance or as a gratuity. The ownership of the property is not the question to be determined. It is the valuation of the property and all of the property involved in the manufacture and sale of gas.

*Tighe et al.* v. *Clinton Telephone Co.*, 3 W. R. C. R., 126.

*In re Application Public Service Gas Co.* (N. J.), 1 B. P. U. C., 470.

In this view of the law and under the facts as shown, there can be no serious question or controversy in the matter of valuing all of the distribution system and valuing all the property that is used and useful in the manufacture, sale and distribution of gas in Lincoln.

The testimony on the former hearing showed that the company had expended on account of piping for gas ranges $16,500 (Transcript, p. 116).

Mr. Honeywell testified:

> Q. "How about connections for gas ranges and so on?"
>
> A. "We pipe to the new range the first time without charge; after that we charge the consumer for it." (Transcript, p. 1273.)

The $16,500 for this item represents an actual expenditure by the Company and is a part and portion of the property used and useful in the manufacture, sale and distribution of gas and of course is to be included in the valuation of the property. This amount represents the net amount charged into the construction account of the Company after all credits have been allowed on account of any payments by the consumer or on account of any charges for any part of the labor and material entering into the operating accounts. It is a part of the investment of the Company in that portion of the distribution system and is to be valued as a part

of the distribution system of the Company. No valid objection or good reason can be given for excluding this investment in piping for gas ranges. The gas ranges in stock and the gas fixtures are a part of the Company's property and have been inventoried and valued in this proceeding. The item was allowed upon the former hearing and should stand as allowed by the court.

In *State Journal Printing Co.* v. *Madison Gas & El. Co.*, 4 W. R. C. R. 501, the Commission says:

> "To put in piping or connections between the curb and the house, wholly or partly at their own expense, is a practice that is quite common among public utilities. This practice is undoubtedly quite effective as an aid in extending the business. * * * In order to be a success from a financial point of view, public utilities, the same as other enterprises, must have customers, and these, even for the former, are not always secured without cost. This is especially true in cases where the desire is to secure this business more promptly or with less delay than that which is quite common where the demand for the services is left to take its course and is not stimulated by artificial means. In a general way it can perhaps, be said that the greater the business of such a utility is, the lower are also its rates and the better the services it renders. Extensions in their business, even when secured through the expenditures of money and efforts are therefore in line with sound business principles and in harmony with the best interests of the plant as well as of its customers" (588).

In view of the above authorities and considerations, we submit that the Master erred in refusing to allow that portion of the cost of Services which was paid by the consumer.

**Working Capital.**

The Master in his discussion of the subject of Working Capital in his report concedes the necessity of making some allowance for this item in determining the value of the Company's property, which should be added to the aggregate values of the other items of such property. His only problem, therefore, was to determine the proper amount of said allowance. In the former trial of this action, Munger, J., allowed $50,000 for Working Capital. Mr. Lea's estimate for the proper allowance to cover this item was $72,037.64. (Transcript, p. 418.) Mr. A. D. Adams for the City gave an absurd estimate that $20,000 was a sufficient sum. The Master allowed $60,000, but why he picks out this particular sum is not quite clear. He states in his report:

> "That evidence upon this branch of the case is far more complete than at the former trial, and relates to a different date, but it does not seem to require a very much larger allowance than was then made by the court." (Transcript, p. 46.)

Just what elements the Master took into consideration in calculating his figure of $60,000, is not disclosed by his report.

Mr. Lea in Exhibit "7," section B (Transcript, p. 1300), sets out in full detail the items constituting Working Capital and by his method showed clearly his familiarity with the usual custom in the treatment of this item of plant value. He said:

> "The Company in the conduct of its business has certain amounts owing to it, but on the other hand, it owes other people certain amounts for the current operation of its property, so what we are trying to arrive at here is the difference between those two, which is the amount of money the Company must have for the conduct of its business as Working Capital."

He testified that the amount of Working Capital herein used was reduced to the minimum and considered it to be a reasonable Working Capital for the business being done here by a concern of this size; any additional credit which the Company might be able to get through its purchasing power would be reflected in the value in the property as a whole and not in the present worth of the Working Capital as such (Transcript, p. 418). The net result of his computation is that he has taken as Working Capital the difference between the current assets covering material, accounts receivable, advance payments for insurance and expenses, and cash on hand and in banks, and deducted therefrom the current liabilities of the Company, representing the current credits in the form of bills payable, accounts payable, amounts due for wages and salaries, accrued interest and customers' deposits. His net result, as an amount for Working Capital, is $72,037.63.

Mr. Wettling, speaking with regard to the amount of working capital as set up by Mr. Lea, said:

> "A. The Exhibit '7-B' • • • amounting to $72,037.83 would constitute then the difference between the current assets and current liabilities and is commonly considered working capital, and is in conformity with the usual custom for arriving at the working capital of a concern" (Transcript, p. 1273).
>
> "Q. If these balances are correctly stated, would it indicate that the difference there was the capital actually employed at the time these balances were taken for that working capital? A. Yes, it indicates that as a necessary part of the capital of the Company" (Transcript, p. 1274).

The testimony clearly indicates the necessity for the allowance of this element of value and the exhibits clearly set out the items which make up the amount and a careful analysis of the exhibits will demonstrate that none of the items can with justice be omitted.

Whitten, in his work on *Valuation of Public Service Corporations*, Chap. XIV, cites a number of cases and quotes part of the decisions relative to this matter of working capital from some of the cases at pages 289 to 302, inclusive.

To cite the cases which specifically uphold the propriety of allowance for working capital in arriving at the fair value of a public service corporation would be to cite practically every rate case decided by the Courts and Commissions in the past ten years, but as indicating the reasonableness of the claim in this case we call the Court's attention to the amount and percentages allowed in a few of the well-considered late cases.

In the Des Moines Gas case, Master's opinion and findings, page 60, allowance is made for working capital $140,000 and in addition thereto for meters in stock $6,603. This is equivalent to 7 per cent. on the physical value of the plant. In *Bonbright* v. *Geary*, 210 Fed., 44 the Court raised the allowance of $23,500 made by the Commission to $50,000; the total value of the plant was not in terms definitely determined by the Court, but the allowance is between 6 and 8 per cent. of the value, so near as may be determined.

In *State Journal Printing Co.* v. *Madison G. & El. Co.*, 4 W. R. C. R., 550-554, and page 556, the Commission allowed $49,674 on a total reproduction value of $946,-602, being 5.5 per cent. plus.

In *Pioneer Tel. & Tel. Co.* v. *Westenhaver*, 29 Okla., 429, the Court criticised as inadequate the allowance of the Commission of $2,433.56 and added thereto $7,249.24, making a total allowance for this item of working capital of $9,682.80 on a total plant value of $94,663.69 and being over 10 per cent. In Public Service Gas Company case reports of B. of P. U. Commissioners of New Jersey, Volume 1, 490-493, the Commis-

sion allowed an amount equivalent to 5.3 per cent. of reproduction new value, including going value, which amount was practically 7 per cent. of the reproduction value excluding going value. In the Cedar Rapids Gas case the Court allowed an amount equivalent to practically 9 per cent. of the value for the plant.

In the *Lincoln Tel. & Tel. Co.'s Application No. 1637*, Nebraska State Ry Commission, decided June 26, 1913, the Commission said:

> "Working Capital.—No telephone business can be properly conducted without a certain amount of working capital, in the form of cash in banks and accounts receivable. These latter items will necessarily fluctuate with the size of the plant, with the diligence observed in making collections, and somewhat with the ability of the people to pay promptly, as well as the habits of the communities in paying their bills. In the meantime the corporation must pay the wages of its employes promptly, must also pay promptly for stores and supplies, or, if it does not, must pay interest thereon and funds so employed or so withheld from the use of the corporation for its legitimate needs, must necessarily pay rate of return, as well as funds employed in the actual physical plant placed at the disposal of the public.
>
> "From studies made, the Commission feels that an allowance of about $109,000 for working capital, together with stores and supplies, for a company of this size, would seem reasonably necessary; such allowance would be the equivalent of 6 per cent. on the reproduction value."

Calculating on this same basis, the allowance for this item in this case would have to be considerably in excess of $75,000, and based on the various percentages allowed in the cases above cited, the allowance in this case would vary between $63,000 and 120,000 approximately.

That there can be no question of the propriety and necessity for an allowance in a substantial sum for this item is clearly shown in the printed record in this case, where, on the basis of the value of the plant and business in 1907, the Court allowed $50,000; this amount was insufficient at the time, but assuming it to be proper as of that time and making due allowance for the growth of the business in the interim and the additions to the plant amounting to approximately $250,000, as disclosed in the record, the sum now contended for cannot be questioned and must be determined as reasonable and conservative.

The calculation by which Mr. Lea arrives at his amount of Working Capital is accurate as well as logical. Why the Master deemed it to be too high or why he chose the figure $60,000 or what was the Master's method of arriving at that figure, is not disclosed by the record. We submit that a proper allowance for Working Capital is $72,037.63.

### 1912 Operating Expenses.

The Master next takes up for consideration the Operating Expenses for 1912. There is no question of the actual facts. They are:

| | | |
|---|---|---|
| Cubic feet of gas sold in Lincoln | | 227,297,000 |
| Gross revenue on Lincoln business | | $273,175.93 |
| Operating expenses, as shown by Company's books | $173,689.87 | |
| Plus excessive residual credit | 2,722.23 | |
| Plus depreciation reserve, as estimated by Mr. Lea | 20,865.03 | 197,277.13 |
| Net Revenue | | $75,898.80 |

(Transcript, p. 48.)

The Master limits himself in his discussion of these Operating Expenses for 1912, to two points, to wit:

"(1) To what extent, if at all, were the disbursements made by the Company for Operating Expenses so recklessly or improvidently made that they ought not, in justice and fairness to the public be allowed and considered as legitimate factors in determining what constitutes a reasonable rate for gas in the City of Lincoln; and,

"(2) What amount, in addition to the disbursements for the renewals and repairs shown in the record, should be allowed as a depreciation reserve?" (Transcript, p. 48.)

The first item of so-called reckless and improvident disbursements, which the Master takes up, is the cost of promotion of new business, $19,692. Although admitting that money must be spent to stimulate business, the Master said that this sum is "so extraordinary as to arrest attention and excite inquiry at once." He calls attention to the fact that litigation was pending to reduce the Company's rate; that it was the Company's "paramount duty" to be conservative; and yet he can not discover any "judicious retrenchment or wise economy." He thinks that $12,000 a year is a sufficient sum for this purpose, and that is what he decides to allow, although he admits, "My conclusion upon the point here considered is one in which I do not feel any high degree of confidence, but it is the one that seems, so far as it may exert an influence on the final decision, best calculated to bring about a just result" (Transcript, p. 50).

The Master seems to have overlooked for the moment his language used in discussing the question of Working Capital He was there considering the advisability of the Company's investing money in gas appliances to be sold for the purpose of stimulating the purchase of gas. He there said:

"The company was, in keeping and selling gas appliances, employing what seems to be a well rec-

ognized and perfectly proper means of getting business. Increase of business is, or ought to be, beneficial to the public as well as to the company. * * * The fact that those appliances were perhaps handled at a loss is not at all decisive. *In all lines of business, it is commonly regarded as sound policy to incur a present inconsiderable loss with a view of securing thereby a larger future gain*" (Transcript, p. 46).

But when the Master comes to the question of expenditures for new business, his attitude in regard to such disbursements seems to have undergone a change.

Now there is an implication in the language the Master uses, when considering the operating expenses for 1912, which the Company asserts is entirely without foundation. The implication is that the Company, facing this suit, proceeded to spend money recklessly and improvidently, so as to pad its operating expense account with amounts disbursed for new business, and with excessive executive salaries, with a view to defeat this rate ordinance. This implication is unwarranted by the facts as they appear in the record, and we propose to demonstrate this by a consideration of the testimony.

*As to Amount Expended for "New Business."*

This utility was created in 1873. From that year to 1902 its sale of gas increased from 0 to 75,691,000 cubic feet per annum. In 1902 a "new business department" was formed and a separate account was placed on the Company's books, to which was charged all money disbursed by this department. This department had a dual purpose, one of which is not revealed in its name, *i. e.*, to secure new business and to hold old business. The formation of this department was concurrent with a campaign for new business which the Company decided to institute. The result of the campaign is shown

in the increase of gas sales secured. The actual figures speak for themselves. From 1902 to 1912 the number of cubic feet of gas sold annually increased from 75,691,000 to approximately 230,000,000. In other words, although it took the utility thirty years to bring the annual sales from 0 to 75,691,000 cubic feet, yet through the efforts of the new business department, in ten years the sales were increased from 75,691,000 to 234,386,000. We beg to call the Court's attention to the chart showing in the form of a curve the precise way the increase occurred (Transcript, p. 1358). In 1900 the population of Lincoln was approximately 40,000 as shown by the United States census, while in 1910 it was approximately 44,000, an increase for ten years of only 4,000 inhabitants; so that the increase in gas sales was due solely to the activity of the Gas Company and not to any unprecedented increase in the population of Lincoln.

It must not be supposed that this increase was accomplished without the expenditure of considerable sums of money. The records of the Company show what these disbursements were:

| | |
|---|---|
| 1903 | $5,578.97 |
| 1904 | 16,400.65 |
| 1905 | 15,919.73 |
| 1906 | 13,432.41 |
| 1907 | 13,394.04 |
| 1908 | 11,634.96 |
| 1909 | 14,019.36 |
| 1910 | 16,152.75 |
| 1911 | 18,985.52 |
| 1912 | 19,692.64 |

(Transcript, p. 1386.)

From this table it will appear at once that the Company spent more money in 1904 than it did in any subsequent year until 1910. And yet there was no rate suit

pending in 1904. The rate ordinance was passed in November, 1906, and during the years 1906 to 1908 the expenditures decreased from $13,432.41 to $11,634.96, while this suit was actually in litigation. Does this show any tendency on the part of the Company to needlessly increase its disbursements? We submit that the contrary is the case.

The reasons for the increase from 1909 to 1912 were given by Mr. B. C. Adams, the manager of the plant, in his testimony (Transcript, p. 668). He stated that with the introduction of the Tungsten electric lamp, current could be bought so cheaply for illuminaton purposes that electricity began to supplant gas in the lighting field. The old customers were substituting electric lights for gas lights, and the newer houses were not being piped at all for gas lights. The result was that the use of gas was being confined more and more to cooking purposes, and inasmuch as Lincoln has no large industries using gas, it began to appear that the field of operation for gas sales was being limited to kitchen ranges. That being the case, it was necessary to put forth extraordinary effort to work that branch of the business to the utmost; and this took money, and the Company spent it for that purpose.

Mr. B. C. Adams predicts that electricity may eventually supplant gas for heating and fuel purposes, as well as lighting, and points to the number of electric irons that were bing sold in place of gas irons (Transcript, p. 668-9).

In view of all these circumstances, the expenditure of the amounts appearing in the new business account was an urgent necessity, but the greatest sum thus expended in any one year was $19,692.64 in 1912. Was this excessive? The Master seems to think so. We can determine this in a convincing manner by the Company's experience in the following year, 1913. In 1913 the Com-

pany expended for holding and acquiring business the sum of $10,399.90 (Transcript, p. 2062, sub. G. 14), which is appreciably lower than the year before. What was the result? The sales of gas in the City of Lincoln *fell off* from 227,297,000 cu. ft. to 219,248,900 cu. ft.; the gross returns from gas sales fell off from $273,175.93 to $265,124.17, and the net earnings from $75,898.80 to $63,294.29 (Transcript, p. 2064).

This was the first time the Gas Company's sales had decreased since 1895. We submit it is apparent that the falling off was due in a marked degree to the reduction of the disbursements for holding and acquiring business: And yet the Master sees his way clear to grant an allowance of only $12,000 for 1912 to cover this expense. We insist that his conclusions can not be justified by the evidence.

*As to the Amount of Executive Salaries.*

The other item of expense, which the Master criticises, is the amount of executive salaries. He states that they "in comparison with those paid by other utilities producing and selling about the same amount of gas, are apparently excessive." He fails, however, to make any actual comparison with any other specific utilities, and we are, therefore, at a loss to know the basis of his conclusions.

This matter is such a small one that we would not take the time to discuss it at length, unless it was so obviously an erroneous conclusion, and unless there was not contained in the Master's remarks a rather serious implication. The Master states:

> "A majority of the stock of the Lincoln Gas & Electric Light Company is owned and controlled by Henry L. Doherty & Company, of New York, a copartnership engaged in banking and manufacturing and controlling through stock ownership over

one hundred utilities—gas, water, electric and transportation—which it operates in practically the same manner as it does the Lincoln plant" (Transcript, p. 51).

The statement that Henry L. Doherty & Company own or control a majority of the stock of the Company is quite untrue. The evidence shows clearly that such is not the fact. The point was brought up during the hearings and definitely settled by the evidence (Transcript, pp. 778, 782). There is no foundation for the Master's remarks, and it becomes especially serious because it seeks to convey the impression that Henry L. Doherty & Company, as majority stock owners, are mulcting the Company by means of excessive executive salaries.

The record shows the salaries are as follows:

| | Pres. | V. Pres. | Chr. Bd. Direct. | Mngr. | Sec. and Treas. | Asst. Sec. and Treas. |
|---|---|---|---|---|---|---|
| 1904 | $3,000 | | | $1,000 | $1,000 | $300 |
| 1905 | 3,000 | | | 1,450 | 1,209 | 300 |
| 1906 | 3,000 | | | 1,800 | 2,999 | 300 |
| 1907 | 3,000 | | | 2,325 | 1,083 | 300 |
| 1908 | 3,000 | | | 2,500 | 1,200 | 300 |
| 1909 | 3,000 | | | 2,400 | 1,500 | 300 |
| 1910 | 2,126 | $2,200 | $2,750 | 2,750 | 1,675 | 300 |
| 1911 | 2,266 | 800 | 3,000 | 3,000 | 1,375 | 300 |
| 1912 | 2,400 | | 3,000 | 3,600 | 1,500 | 300 |

(Transcript, pp. 1568-84.)

During the period covered in the above tabulation it appears that the salaries paid the members of the firm of H. L. Doherty & Company were as follows:

From 1904 to 1909 Mr. Doherty was paid $3,000 as President; from 1910 to 1912 he was paid $3,000 as Chairman of the Board of Directors. From 1910 to 1912 Mr. F. W. Frueauff was paid a salary of $2,400 a year, first as Vice-President and then as President. When he ceased to be Vice-President no salary was paid to that office.

The Master evidently thinks that the Company did not get value received for these salaries, but the evidence shows clearly how the Lincoln Company was benefited by its connection with Henry L. Doherty & Company. This was proved quite clearly by Mr. B. C. Adams, the Company's manager, whom the Master describes as "an exceptionally efficient and capable man, having a thorough technical and general knowledge of the gas business." He testified as to the general benefits derived from the connection with Henry L. Doherty & Company as follows:

> "We do not have regular meetings, hardly, but occasional meetings of the managers that operate in consultation with Henry L. Doherty & Company. I attend those meetings, in which all the engineering problems in these utilities are gone over to a large extent; the purpose of these meetings is to discover improvements and modern methods of operation to make improvements in our operation; have endeavored to keep up with the improvements and modern methods and keep myself advised of any new schemes that seem practicable; consult universally with Henry L. Doherty & Company in matters of engineering problems that arise in this company, and regard that as good practice; I don't think anyone operating a property of this size, or any size, should take it upon themselves to give the last word in all the undertakings necessary to develop the property, it wouldn't be fair; it is customary when troubles are developed and schemes for meeting them to submit it to Mr. Doherty and the Doherty Company; Mr. Doherty acts as a consulting engineer for this company, and their own properties; at all times I have the advice and benefit of that engineering company and avail myself of it absolutely. * * * I hardly think it would be justifiable to make one person carry the responsibility in connection with the operation of this business, it has been usual in other companies to employ competent engineers, or consulting engineers,

or firms for the purpose of getting their ideas as to methods of operation and the policy to be established in conducting the business; I hardly think it would be wise for this company to attempt to operate as an isolated property without obtaining consultation from those who are in touch with other properties, other conditions, and various methods of operation. * * * If I were the owner and operator of this gas plant I would be tickled to death to get the services we have gotten and are getting from Doherty & Company, and would make an arrangement with them to pay Mr. Doherty $3,000 a year, and Mr. Frueauff, $2,500 a year, merely for the privilege of having the benefits we now derive from their connection with this company. I feel it would be a proper expenditure of the money and a proper charge to deduct from the operating expenses here and paid by the gas consumers of this community. * * * I feel that the services of Mr. Frueauff's brother are of sufficient value to this company to justify the expenditure of $600 a year, and have used and felt the need of his services in the operation of this plant. He has transacted business in this community in connection with the dollar gas case, has worked on the record some, and outside of that he has rendered services locally in connection with the $500,000 three-year notes and he and Mr. Strode consulted occasionally; I don't think Mr. Strode could have handled all that transaction perhaps, but Mr. Frueauff with his New York City connections was able to handle a good many details that Mr. Strode could have handled by going down there, not with the financial end in New York, but the local end. * * * Doherty & Company negotiated the transaction for the $500,000 notes, which were sold, I think in the Fall of 1911, to take up some of our bonds, they have also taken part by raising funds or financing this company within the past five years, by taking up the one year notes issued in 1907, when they became due and carried them themselves for some time; these notes I think were for $100,000 and were held locally to a certain extent by banks and individuals. * * *

Those notes were taken up by Doherty & Company the year after they were issued, they were one-year notes and were taken up when they were matured, in taking up the notes the holders drew on Doherty & Company with the notes attached and Doherty & Company provided the funds to take care of them. * * *

"As to any other transaction since Doherty & Company have been connected with this Lincoln Company, in addition to the $500,000 note transaction, I think they carried the bond in this dollar gas suit put up by the National Surety Company; in connection with this case the company, by a bond to reimburse the consumers for this extra 20 cents in case the Court should hold against the company, in giving that bond the company had to indemnify the surety company; in addition to this $100,000 note transaction and the $500,000 note transaction and this indemnity bond furnished the Doherty & Company, since they have been connected with this property, have at times paid bond interest and we have reimbursed them for it later. * * *

"Returning to the other subject for a moment I am able to name another transaction since Doherty & Company became connected with the company in which they financed the Lincoln Company, when we bought the five hundred cubic foot holder, Doherty & Company was able to get the Western Gas & Construction Company to take notes that they would not have taken had we been standing on our own ground; I think we gave them notes for one of our water gas machines and that was absolutely due to the connection Doherty & Company had with the property. They have always been able to establish a credit for this company with concerns that might be caused to bear down a little heavily to make us pay up; I remember when I was first manager, we had a big account with the Maryland Motor Company that we couldn't pay, and Doherty & Company were finally able to get the Maryland Company to take our notes; they were also able to get the Detroit Stove Works to take notes for amounts we owed and couldn't pay them.

and they wouldn't have taken them if we had attempted to negotiate that sort of a transaction ourselves; I think they also got the Denver Gas & Electric Company to take notes for amounts we owed for coke we got, and I am sure they wouldn't have taken them had we done it ourselves. * * *

"C. H. Dockery & Company are the people who sell us meters. I imagine that was an additional discount we received from them that was credited on their New York books, the meter transaction was conducted through the New York office in the first instance, but the New York office did not pay for the meters; this is their connection with that transaction, in their purchase of meters for all of their companies they are able to get a lower price on meters" (Transcript, pp. 603, 604, 619-622).

So it appears in a general way that the Lincoln Company profited by its connection with Henry L. Doherty & Company in the following respects:

(1) General engineering advice and supervision on construction and operation.

(2) Financing.

(3) Extending the company's credit.

(4) Securing discounts in the purchase of supplies.

The value of these services as compared with the amount of the executive salaries paid has been amply demonstrated by the testimony of Mr. B. C. Adams himself, who is concededly in a position to know the facts.

The Master makes reference to a comparison of the company's executive expenses with those of other utilities. The City brought up the subject of what was shown by the returns in the Massachusetts companies as regards executive salaries. Eventually an exhibit was introduced showing what the comparison was. The Lincoln Company's expenditures for "salaries, office, distribution and general expenses" showed an average of

26.02 cents per thousand cubic feet of gas sold. Referring to Exhibit "425-V" (Transcript, p. 1392), the Court will note the expenditures of the Massachusetts companies for "salaries, office, distribution and general expenses" in cents per thousand cubic feet of gas sold.

For the year 1911:

Boston, .12367; Brockton, .25321; Cambridge, .13361; Charleston, .11529; East Boston, .20962; Fall River, .16418; Haverhill, .48407; Lawrence, .12062; Lowell, .18419; Lynn, .17054; Malden, .21094; New Bedford, .18362; Newton, .22593; Pittsfield, .24704; Salem, .19547; Springfield, .18330; Suburban, .24633; Taunton, .14671; Worcester, .07172.

For the year 1912:

Boston, .11232; Brockton, .25800; Cambridge, .12730; Charleston, .10391; East Boston, .19153; Fall River, .13380; Fitchburg, .35039; Haverhill, .30054; Lawrence, .12639; Lowell, .20312; Lynn, .10139; Malden, .15879; New Bedford, .18569; Newton, .22812; Pittsfield, .21865; Salem, .19852; Springfield, .19927; Suburban, .24199; Taunton, .14485; Worcester, .08596 (Exhibit "425-V").

In view of the above we inquire the basis of the Master's comments that "the executive salaries, in comparison with those paid by other utilities producing and selling about the same amount of gas, are apparently excessive."

Another point raised with a great deal of persistence by the City was the fact that the account of salaries of the Lincoln Company per cu. ft. of gas sold was increasing during recent years, even though the gross sales of gas were increasing; whereas they contended the proportion of salaries should have decreased as the volume of gas sold increased. But we can very shortly point out where the increase occurred and show that it was

*not* in the salaries paid members of the firm of Henry L. Doherty & Company. The table above given shows that in 1904 the manager was paid a salary of $100 a month, which is obviously small. This was gradually increased until in 1912 he was paid $300 a month. In other words, in eight years his salary was tripled. In 1904 the secretary and treasurer's salary was $100 a month, whereas in 1912 his salary was $125 a month, an increase of 25 per cent.

In view of these facts we submit that the Master's implication that the members of the firm of Henry L. Doherty & Company were receiving salaries in excess of services rendered, is entirely without foundation in the testimony, and the Master's conclusions that the company dispersed money for operating expenses recklessly or improvidently during the year 1912 was entirely erroneous.

There is another matter which the Master seems to have completely overlooked. If the salary of Mr. Doherty ($3,000) and the retainer of Mr. C. A. Frueauff ($600) is to be disallowed, only such proportion should be excluded as the ratio of the company's gas business bears to its entire business. Mr. Lea estimates that the gas business is 80 per cent. of the entire business. The Master's figure is 73 per cent. So that instead of disallowing $3,600 from the salaries account, he can not possibly disallow more than $2,280, if Mr. Lea's percentages are correct, or $2,628, if the Master's percentages are correct. This is a small matter, but, we submit, the Master's report is so full of inaccuracies that we deem it essential to correct them as we proceed in our discussion of the report.

*Depreciation.*

The Master allows the sum of $12,000 to be set aside as a depreciation reserve for the year 1912. Why he selects that particular figure, we are unable to state. He does not tell us. He merely discusses, in the broadest terms, the general subject of repairs and renewals and rejects Mr. A. D. Adams' method of computing the reserve to be set aside for repairs, renewals and depreciation based on the plant output. Mr. A. D. Adams would allow 9c. per M. cubic feet of gas to cover all the items of repairs, renewals and depreciations. This method the Master properly rejects. He says:

> "There is, so far as I can see, no close or constant relation between plant depreciation and plant product, and any estimate based on the assumption that there is, would in my judgment be more or less arbitrary" (Transcript, p. 50).

The only proper method of determining the annuity to be set aside for depreciation is the method adopted by Mr. Lea; that is, by estimating both the age and the life of the property, and having decided its Reproduction Cost, to set aside such a sum annually, as would, at the end of the life of the equipment, reproduce the original cost. The "straight line" basis of figuring depreciation (which the Master says he has adopted), is the simplest method of figuring depreciation and is applied by dividing the number of years of the estimated life of each item of equipment into the Reproduction Cost. However, it is obvious that this method cannot be applied unless one determines the estimated life of the equipment. The Master's report is absolutely silent as to what life he has attributed to this property.

The Supreme Court of the United States, in reversing the former decision in this action and ordering a reference to a skilled Master, said (364-5):

"There should be a full report upon past depreciation, *past expense for reconstruction or replacement, and past operating expenses, including current repairs.* We should be advised as to the gross receipts for recent years, and just how these receipts have been expended. *Then the amount to be set aside for future depreciation will depend upon the character and probable life of the property and the method adopted in the past to preserve the property.* It can be readily seen that the amount to be annually set aside may be such as to forbid rate reductions because of the requirement of such a fund. The matter is one first for a skilled Master *who should make a full report upon the value of the property, the receipts and the expenses of operation and the sums paid out on reconstruction and replacements,* and in dividends in recent years."

Can the Master's report be said to comply to these instructions? He has given no "probable life" at all. He has not even indicated how he arrives at his depreciation reserve of $12,000. As for money expended for reconstruction and replacements, including current repairs, the Master frankly admits that he is unable to make the calculation, although all the company's records in recent years were in evidence. The Master has apparently disregarded the Supreme Court's instructions and for such reason his report is valueless.

By analyzing the ratio between the Master's Reproduction Cost and his Present Value, we can determine that he must have estimated that the property had a present per cent. condition of 88.67 per cent., whereas Mr. Lea estimated 78.54 percentage and Mr. Adams 74.97 per cent. In other words, the Master's present per cent. condition is more than 10 points higher than the highest estimate in the record. Stated in another way, the Master must have estimated the composite age of the property at 5.96 years, whereas Mr. A. D. Adams' estimate was 12.4 years and Mr. Lea's, 10.02 years. This

calculation shows that the Master must have assumed that the property as a whole, had a composite age of 4.07 years lower than the lowest estimate in the record. This again raises the question as to whether the Master's findings were based on the evidence.

**Apportionment of Operating Expenses.**

The matter of apportioning operating expenses is purely a question of sound judgment.

The Master's basis of apportionment is the relative number of consumers in each department. This ratio, however, varies each year, and it is not, we submit, consistent with sound judgment to apportion the operating expenses of any particular year on the basis of the consumers for that year. If apportionment is to be made on the basis of consumers, a fair average for a number of years should be the measure of such apportionment. For this purpose the Company introduced in evidence an exhibit showing the proportion of consumers during a period of ten years prior to 1912. This exhibit ("101") (Transcript, p. 1849) is as follows:

| Year Ending | No. Gas Consumers | No. of Electric Consumers | % Gas | % Electric |
|---|---|---|---|---|
| 1902 | 3224 | 771 | 81 | 19 |
| 1903 | 3859 | 834 | 82 | 18 |
| 1904 | 4658 | 1006 | 82 | 18 |
| 1905 | 5320 | 1214 | 81 | 19 |
| 1906 | 5882 | 1486 | 80 | 20 |
| 1907 | 6244 | 1640 | 79 | 21 |
| 1908 | 6630 | 1855 | 78 | 22 |
| 1909 | 7047 | 2228 | 76 | 24 |
| 1910 | 7587 | 2122 | 78 | 22 |
| 1911 | 7896 | 2389 | 77 | 23 |
| 1912 | 7816 | 2934 | 73 | 27 |

The average per cent. of apportionment for this ten years is approximately 79 per cent. for the gas department and 21 per cent. for the electric department. To

expedite calculations, the Company uses the figures 80 per cent. and 20 per cent. This apportionment is essentially fair. The Master's method of picking out the per cent. for the particular years is not reasonable, and would lead to confusion in calculating and comparing the expenses for the various years. A reasonably constant percentage of apportionment is the customary and more accurate method of calculating results in this matter. Even if, therefore, the Master objects to 80 per cent. and 20 per cent, as a division of customers, he certainly is not justified in using a different apportionment than 79 per cent. and 21 per cent.

**1912 Earnings.**

In this subdivision of the report, headed "Revision," the Master summarizes his findings on valuation, stating the total to be $676,565. We have heretofore set forth our reasons for claiming that these findings on valuation are erroneous, and we will not restate those reasons except to repeat that said total, as shown by the evidence, should be $1,090,913.

The Master then summarizes his findings as to earnings and operating expenses. The gross earnings for the year 1912 at $1.20 per M. cu. ft. were $273,175.93. This figure is conceded by all parties. From these gross earnings the Master would deduct $182,015 as operating expenses. Mr. Lea's figure is $197,277.13. From Mr. Lea's figure for operating expenses the Master has deducted:

| | | |
|---|---|---|
| (1) | Difference between $19,692, amount expended for new business, and $12,000, allowed by Master for such expenditures | $7,692.00 |
| (2) | Difference between $20,865, amount of estimated depreciation by Lea, and $12,000, allowed by Moster for same | 8,865.00 |
| (3) | Salary of Henry L. Doherty and retainer of C. A. Frueauff (full amount) | 3,600.00 |
| (4) | Estimated difference necessitated by Master's reapportionment of operating expenses | 3,300.00 |
| | Total | $23,457.00 |

(Transcript, p. 52.)

This sum the Master cuts off the Company's operating charges for the year 1912. The propriety of so doing we have heretofore considered. After calculating the occupation tax at $8,195, the Master arrives at a net income of $91,165, as against Mr. Lea's figure of $75,898.80. On the basis of the $1.00 rate the gross income would be $227,297. Using the Master's operating expenses of $180,639 and net income of $46,658, he arrives at a figure of approximately 6.9 per cent. of his own total valuation.

If we take the Master's figure of $46,658 for net earnings and calculate the percentage by using Mr. Lea's total valuation, the result shows the net earnings for 1912 to be 4.2 per cent.

If we take the gross revenue at the $1.00 rate ($227,297) and deduct the operating expenses as calculated by Mr. Lea—$197,277.13 (not including the occupation tax)—we show the net earnings to be $30,020, which, with the Master's total valuation of $676,565, would indicate a return of 4.4 per cent; and if we also include the occupation tax the figure would be 3.2 per cent.

In other words, the Master arrives at his figure of 6.9 per cent. return only by greatly reducing the estimated value of the Company's property and by simultaneously reducing the Company's operating charges. Thus the Master's figures cannot be sustained if either of his estimates are erroneous, and we submit they both are.

VOL. III.

SUPREME COURT OF THE UNITED STATES.

| | |
|---|---|
| LINCOLN GAS & ELECTRIC LIGHT COMPANY, Appellant, *v.* THE CITY OF LINCOLN, *et al*, Appellees. | October Term, 1917. No. 300. |

**Discussion of the Qualifications of the Witnesses.**

We have heretofore mentioned that the Master in no place in his report gives the Court his views as to the weight which he attaches to the testimony of the various witnesses, expert and otherwise, who were examined before him.

In fact, he expressly states: "To give the names of witnesses together with what I might conceive to be a fair condensation of their testimony upon any controverted point would, as I view it, be altogether valueless." (Transcript, p. 36.) When the fact is considered, however, that the testimony of one of the experts in the case, to wit, Mr. Alton D. Adams, the City's witness, was continually assailed, and his right to speak as an expert denied, we submit it is, to say the least, quite unsatisfactory that the Master does not intimate, even to the slightest degree, what were his conclusions with regard to the weight which should be attached to the testimony of that particular witness.

The only comment on witnesses which the Master makes throughout his report are as follows:

(a) Of Mr. Broadnax, the Company's witness who made the inventory, he says:

> "The property was inventoried by Mr. Broadnax, an employe of the Company, and a gas engineer of long experience. The work seems to have been done with unusual thoroughness." (Transcript, p. 37.)

(b) Of the local witnesses on real estate, he says:

> "The local witnesses were all men of fair intelligence, evident candor and qualified by observation and experience to give evidence entitled to serious consideration." (Transcript, p. 38.)

Here we may again remark that the witnesses for the Company valued certain of the real estate at approximately $12,000, whereas, the witnesses for the City valued the same real estate at $2,625, which the Master states is "obviously too low." (Transcript, p. 38.) And, yet, even though it is apparent to the Master that the estimate of the City's witnesses on real estate was obviously too low. he still thinks they were all men of fair intelligence, evident candor and qualified by observation and experience to give evidence entitled to serious consideration.

(c) In his finding on the value of Works Equipment, he states that the evidence of values which came principally from the witnesses Lea and Adams, "clashes irreconcilably at almost every point." (Transcript, p. 40.)

(d) He characterizes Mr. B. C. Adams, the Company's Manager, as "an exceptionally efficient and capable man, having a thorough technical and general knowledge of the gas business," (Transcript, p. 51.)

Other than as above quoted, the Master gives not the slightest intimation of what value he attaches to

the testimony of the various witnesses, but merely catagorically quotes the estimates which each gives.

In view of the failure of the Master in respect of these matters, we deem it our duty to place before this Court a summarization of the qualifications of the various witnesses, and such of their testimony as tends to bring light upon their standing as experts in respect of the matters upon which they were called to testify.

(*a*) *Alton D. Adams.*

The City placed upon the stand (and in so doing vouched for the correctness of his testimony) Mr. Alton D. Adams as an expert to appraise the value of the gas property owned by the company, and to calculate its proper operating expenses and revenue. Upon the determination of these questions is dependent the decision as to whether or not the City by its ordinance is confiscating the property of the company. The outcome of the suit is of vital importance to the company.

What are Mr. A. D. Adams' qualifications to testify as an expert in respect of value and operation of gas property? On his own admission the following is true:

(1) He has never built or assisted in any way in building a gas plant or distribution system.

(2) He has never constructed or assisted in any way in the construction of any building of any kind whatsoever.

(3) He has never been engaged in the manufacture or sale of gas in any capacity whatsoever.

(4) He has never managed a gas property or been connected or associated with any company so doing.

(5) He has never manufactured, bought or sold gas equipment, mains, services, meters or appliances, or any

of them, or been connected or associated with any firm or corporation so doing.

(6) He has never had one day's practical experience in the art or trade of manufacturing or selling gas or in the business of manufacturing or selling equipment or appliances useful in the gas business (Transcript, pp. 1053, 1264).

Bouvier, in his Law Dictionary, says that the word expert is derived from the Latin word "experti," and means "skilled by experience." The definition of the term requires knowledge derived out of experience. If the witness who presents himself has had no experience, or has not been instructed out of experience, he is not an expert, and if he testifies it will be for some other reason and in some other capacity.

In *Soquet* v. *State* (Wis.), 72 Wis., 659, it was held that on a trial for murder by poisoning, a medical witness is not qualified to give an opinion that the symptoms of the last sickness of the deceased indicated poison by arsenic, when he had never seen a case or had any experience whatever in cases of arsenical poisoning, and all that he knows on the subject is derived from medical or scientific books and medical instructors.

In *Luning* v. *State* (Wis.), 2 Pin., 284, 288, the Court said:

> "it is manifest that the purpose of the question and proposition was to extract from the witness evidence of facts derived from his 'scientific,' not his personal knowledge; or, in other words, that he was to swear to facts, the existence of which he only knew from his reading; and this, upon no principle of evidence, could be admitted."

In addition to the above authority we have a direct ruling of a Federal Court on the competency of so-

called experts who have no practical experience. The case we refer to is the Des Moines Gas case, and the witness was Prof. E. W. Bemis. The record in this case shows that Prof. E. W. Bemis was a witness for the City of Lincoln upon the former hearing, and his qualifications are shown in the printed record. Prof. Bemis testified that he was one of a committee of five of the National Civic Federation, which made a special study of private and municipal gas works in this country and in Great Britain, and that he wrote a series of reports for that committee which were published; that he did a large amount of work in New York, Boston, Syracuse, Buffalo, Saginaw, Cedar Rapids, Montreal and other cities, and that he had charge of the water works for the City of Cleveland some seven years; but that he had not been connected with gas works in a practical way. The evidence shows that Prof. E. W. Bemis was a witness in the Des Moines Gas case, and that Mr. A. D. Adams was present there, but did not participate as a witness; that Bemis was put forward as possessing superior qualifications. The Special Master in the Des Moines case disposed of Prof. Bemis' testimony as follows:

> "There are very few men, who, through investigation, have gained more information in relation to the operation of public utilities of the character in question, than Prof. E. W. Bemis, and he is an experienced man in water works. He is undoubtedly a very valuable man to assist in a case like the one at bar, but he is not a qualified expert upon values.
>
> "There is a very great difference between information gained by investigation and from statistics, and that gained by actual experience in the business.
>
> "It is evident that for some time his efforts have been directed in the work of securing lower rates for the public, who are patrons of public utilities, and his efforts in that direction are laudable, and in

this work he has gained a large amount of general information, but any man in so doing will have his eyes open for everything bettering his side of the case. Much of his evidence was purely argumentative and incompetent, unless made so by the extensive cross-examination by complainants.

"He has gone quite extensively into statistics and in a very intelligent and comprehensive manner, but, granting that such evidence is competent, it became evident to me that they are not reliable when accuracy becomes necessary. They may very properly be consulted when we are simply seeking approximate results, but not when accuracy is required.

"Similarity of conditions must exist, and similar results are required. It is very doubtful if the same results can be produced each day with the same plant at the same cost. But granting that it can be done, then we must compare the conditions of the plant from which statistics are derived, with the plant in question before they can be regarded as reliable and accurate. The matters involved in the present case demand as great accuracy as possible, and to get it, we must look to the conditions involved in the plant in question, rather than resort to statistics, which involve conditions of which we have but little, if any, knowledge, without opportunity to investigate beyond what little is given in that various tables submited."

What does Mr. A. D. Adams say of himself with regard to his own qualifications in posing as a gas expert?

"I have resorted extensively to these returns (of Massachusetts companies) in the office of the Massachusetts Gas Commissioners to aid me in forming an opinion, among other things, as to the amount of cost, to the Lincoln Company, for the various salaries, office, and distribution and general expense of the Lincoln Company, apart from its cost of materials and labor involved in making gas, and apart from its taxes. I have also resorted to these Massachusetts returns very considerably for many

> years, as a basis of forming an opinion on the subject of necessary amounts for repairs, renewals and depreciation, so that my opinion on both of these branches runs back largely to the facts disclosed by the returns in the hands of the Massachusetts Gas Commissioners" (Transcript, p. 992).

The witness was asked:

> "Q. What experience, if any, did you ever have in the manufacture of gas such as this company furnished here? A. Why, I have watched and analyzed" (Transcript, p. 1264).

And again:

> "Q. Did you ever have any actual experience on a job of putting up a building? A. I say I did; yes, a great many.
>
> "Q. I don't mean putting them on paper; I mean helping put them up. A. No, I never helped put up a building" (Transcript, p. 1264).

He testified, further, that he prepared some general plans once for a gas plant at Ypsilanti, but that the plant was never built, and the evidence in the case fairly discloses that it was not the purpose of Ypsilanti to build a gas plant, but was part of a plan to acquire the plant in service there, and the City needed a showing of low cost as a means of depressing the values of the plant of the company that was being forced to sell (Transcript, pp. 1053, 1059).

Counsel for the Lincoln Company pressed the inquiry as to the actual experience of this witness, until the Master stated in the record the following:

> "It seems to me that this has gone far enough to show that Mr. Adams has had no practical experience in the sense you use the term. You and he don't agree on the definition, but the evidence is very plain" (Transcript, p. 1053).

On his own admission, therefore, Mr. A. D. Adams is

not a practical gas engineer of experience, but merely a statistician in respect of the returns filed by Massachusetts gas companies with the Commission of that commonwealth. As such a statistician he bases his sole right to be heard as a gas expert in this case.

This brings up the immediate question of what value the Massachusetts gas companies' returns have in aiding a student of them to qualify as an expert in valuing and operating gas properties.

In the first place, the testimony and the exhibited copies of the returns to the Massachusetts Commission show that these returns in no way disclose information concerning the cost of any particular item of gas equipment; they do not show the cost of water gas sets, coal gas equipment, gas holders or other items of gas appliances. So that a skilled statistician of these returns would be just as much in the dark as to these items or units of cost as if he had never seen a Massachusetts return.

But Mr. A. D. Adams gives us a better insight as to the value of these Massachusetts returns in equipping one who has studied them to testify as an expert on gas properties. Mr. A. D. Adams first admits that the returns are never checked by the Commission to see if the returns have been properly, accurately or honestly made, but these matters are left largely to the discretion of the particular companies. He testified:

> "Q. If you think they haven't time down in Massachusetts to see that those companies make proper reports as to the money expended for repairs and renewals, or expended for expense, do you think they have time to check over and determine whether the items expended for the operation of the plant are properly entered and applied under the classification they assume to apply them under? A. Not generally by any means. * * *
>
> "Q. It is left very largely to the company to

make up its own reports about in its own way, excepting they must fill out the standard form? A. The Company, as a matter of fact, exercises a good deal of discretion in making out its report; there is no doubt about that" (Transcript, p. 1265).

But later on in the hearing Mr. A. D. Adams went further into this matter. Because the Massachusetts returns did not bear out certain conclusions which Mr. A. D. Adams deducted as a result of his study of them, he turned on the reports and attaacked them very frankly, asserting that they were falsely and fraudulently prepared by the companies in a dishonest attempt to cover up their earnings. And he further states that this corrupt practice is known to and acquiesced in by the Honorable Commission of the Commonwealth of Massachusetts. His testimony is as follows:

"Q. You have indicated that you thought the commission knew of this practice that you referred to as existing in Massachusetts? A. I know they know; it is brought up repeatedly in the hearings there, there is no 'think' about it, it is just as well known as any practice could be and the commission can't help it.

"Q. They can't help it? A. No, sir.

"Q. They can not change or direct that item to be entered as it should be entered in the returns to the Commission? A. The trouble would be that it would require an army of accountants and engineers to chase up the fifty companies to see what they entered as a repair or as a renewal was in fact an extension; it is the practical enforcement of a regulation of that kind, on a matter involving as much judgment, engineering and skilled judgment as that does, that makes it impossible and impracticable for the Commission to enforce a rule on that matter (Transcript, p. 1265).

"Q. Now, if you think they haven't the time down there in Massachusetts to see that those companies make a proper report as to whether the money expended is for repairs and renewals or ex-

pended for extensions, do you think they have sufficient time to check over and determine whether the items expended for operation of the plant are properly entered and applied? A. * * * Not generally, by any means. * * * (Transcript, pp. 1265, 1288.)

"Q. Now you referred to the matter of repairs and renewals in Massachusetts and said that some of the companies in Massachusetts were in the habit of covering up their earnings by entering as renewals or repairs what were in fact extensions, I think you said? A. Well, that may be a fair summary of what I said.

"Q. Now, do you think the Commission in Massachusetts knows that this is being done? A. "Oh, it is notorious" (Transcript, p. 1265).

Here we have from the witness's own lips a true estimate of the value of the Massachusetts returns, which leaves the witness in this position: He has been a statistician for many years of inadequate and corrupt returns of some gas companies in the State of Massachusetts. It is on this basis that his testimony is offered in a suit to determine whether the City of Lincoln is confiscating the property of Lincoln Gas & Electric Light Company. We confess in all seriousness that the introduction of the testimony of such a man in the capacity of an expert in a suit of such vital importance is a shock to our sense of fairness and justice, and we claimed repeatedly throughout the hearings that the testimony of Mr. A. D. Adams was inadmissible because he was not qualified to speak as an expert.

But we have more serious charges to make against Mr. A. D. Adams and his testimony in this case. We have spoken heretofore only of his qualifications as an expert, and the question of the admissibility of his testimony as a matter of law. But we must now speak of the weight to be attached to his testimony as an expert in

this suit, and point out his attitude and bearing throughout the hearing. We maintain that the bearing of the witness before the Master was such as to warrant the Court in completely disregarding his testimony as untrustworthy and not entitled to consideration.

The evidence shows (Exhibit "414") (Transcript, p. 2036) that on December 25, 1912, Mr. A. D. Adams gave the city attorney the following opinion:

"Lincoln, Neb., Dec. 25, 1912.

"Fred C. Foster, City Atty.,
"Lincoln, Neb.

"Dear Sir:

"The following complies with your request for a statement as to the profit of the Gas Company:

"If the gas sold in Lincoln during the year of 1907 had been at the net rate of $1.00 per thousand feet, the Gas Company would have earned more than 9 per cent. on the value of its plant above necessary operating expenses, including depreciation.

"Since 1907 the gas output has increased constantly, being 26 per cent. greater in 1911 than in 1907, and this implies still larger profits.

"Yours respectfully,
"ALTON D. ADAMS."

This opinion was given to advise the City of Lincoln against a settlement of this controversy with the Company. Mr. Adams testified:

"Q. Did you make any estimate before Mr. Lea testified and furnished his report? A. Why, no, sir; no direct estimate of my own, I looked at the estimates your men made in the case in the United States court and did a little thinking about that, but I didn't make an estimate of my own" (Transcript, p. 1280).

Mr. Lea testified in March, 1913, about three months after the report had been given by Mr. A. D. Adams in

the letter above quoted. Three months after he had written that letter he had yet made no direct estimate of his own. It is clear, therefore, that Mr. A. D. Adams had a motive for testifying so as to sustain his opinion irrespective of the facts of the case and irrespective of what his honest belief may have been concerning those facts. The record discloses what effect this circumstance had upon Mr. A. D. Adams' bearing during all the hearings before the Master. He was straining every nerve and using every means to sustain his opinion. The result was seen in the early stages of the hearing before the Master, when it was requested by the City that Mr. A. D. Adams be permitted to cross examine Mr. Lea. This was consented to at the time by the company, and Mr. A. D. Adams thereupon entered upon the duties of an advocate in addition to those of an expert witness. He claimed to be a graduate of the Harvard Law school, so that perhaps this role was not unfamiliar to him. If the matter had stopped with the cross examination of Mr. Lea we would not deem it of sufficient importance to direct the Court's attention to it; but the witness continued in the service of an advocate throughout all the hearings and persistently cross examined every witness presented by the Company. His cross examination shows that he was not seeking in a broad way to lay before the Court all the facts in a calm, dispassionate manner, but he proceeded to exhibit such signs of vindictiveness toward the Company's witnesses as to call for comment from the Master. The Master interrupted the cross examination, and said:

> "Mr. Adams, I think you inject into your questions comments that are unnecessarily irritating, an irritating vein of sarcasm; I don't want to criticise you but I can see the effect on Mr. Lea and I think we would be better off if you would eliminate that, and if you do that I think Mr. Lea will endeavor to

give you direct and responsive answers to your questions."

Mr. A. D. Adams' cross examination of Mr. Schmidt, the young man from the water department of the City, who kept the records showing the cost of laying the water mains, is full of cunning, and his cross examination of Perry Hahn is an example of the effort of an unscrupulous advocate endeavoring to minimize evidence of important facts.

The courts have quite generally condemned the practice of counsel furnishing through their own evidence the testimony upon which the case is to be tried. Lord Chief Justice Campbell once said in an early case:

> "It is, in my opinion, indispensable to the administration of justice that a witness should not be turned into an advocate nor an advocate into a witness."

In *Wilkinson* v. *People* (Ill.), 1226 Ill., 135, the court said:

> "In the English courts, in several cases, it was held that an attorney can not appear in the same cause in the double capacity of witness and advocate, and it has been so ruled in Pennsylvania and in Iowa, on the circuit. In Indiana it was held by Judge McDonald, now United States district judge, that an attorney in a cause could not be permitted to testify to the general merits of the case. In *Frear* v. *Drinker*, 8 Penn. 521, the court said that it was a highly indecent practice for an attorney to cross-examine witnesses, address the jury, and give evidence himself to contradict the witness; that it was a practice to be discountenanced by court and counsel; that it was sometimes indispensable that an attorney, to prevent injustice, should give evidence for his client. It, however, leads to abuse, but at the same time, there is no law to prevent it. All the court can do is to discountenance the prac-

tice, and, when the evidence is indispensable, to recommend to the counsel to withdraw from the cause. The subject has engaged the attention of other courts and of this court, and, however indecent it may be in practice for an attorney, retained in a case and managing it, to be a witness, also, we can not say he is incompetent, and must leave him to his own convictions of what is right and proper under such circumstances."

Mr. A. D. Adams testified as follows:

"Q. Of course, you feel that the City is your client in this matter? A. I centainly do.

"Q. That you are in the service of the City and you represent the City in this controversy and that you are giving the City the best service you have? A. Yes sir.

"Q. And in its interest? A. Yes, sir.

"Q. But you do not feel free to volunteer information or opinions or judgments to this company for its benefit in this controversy? A. I do not think I am called upon to do that; no, sir.

"Q. Especially in view of the fact that you have participated in pursuing a vigorous cross-examination of witnesses you would hardly be expected to turn around the next day and render assistance, even though you felt that the facts, if fully disclosed, would be to the benefit of the Company? A. Well, I haven't considered any facts that I thought were necessary to the Company, if that is what you are driving at." (Transcript, p. 1266.)

The above testimony not only bears on the weight to be given to the witness' testimony, but it bears on the question settled by the rules of court that an expert witness must retain a position in the case to speak fully and freely of opinions which he is qualified to give. As said in one of the cases, "Expert testimony should be the colorless light of science brought to bear upon any case where it is summoned. It should be impartial, unprejudiced. There should be no half-truths uttered

and supression of the whole truth is in the nature of false testimony.'

That the court may see clearly that the testimony above quoted is a correct expression of the conception that Mr. A. D. Adams had of his connection with this case we will cite a few examples of his testimony to illustrate the point that the witness was at all times biased in extreme; that he was controlled by no principles of fairness whatsoever in estimating value, and that he deliberately sought to utter half-truths and to suppress testimony regarding the whole truth of matters under consideration.

(1) Mr. A. D. Adams estimated the cost of laying 4 and 6-inch water mains in Lincoln at 12.07c per foot. It appears that the water department of the city laid 20,376 feet of such mains during the year 1913 (Exhibit "405"), (Transcript, pp. 2032-2036), in the very streets and under the very same conditions as the Gas Company had laid its own mains. The City's actual cost of laying said water mains was 25.74c per foot, or more than double the estimate of Mr. A. D. Adams. Similarly the total water pipe laid by the City, as shown by its record. (Exhibits "402-405," inclusive), (Transcript, pp. 2032-2036), for the years 1910 to 1913, inclusive, was 85,610.8 feet, at a total cost for labor, trenching, laying and cartage of $27,790.22, or an average cost per foot of 32.46c. For the same pipe for the Company's gas mains, applying the unit cost applied by Mr. A. D. Adams for the particular sizes of mains making up the total of 85,610.8 feet, Mr. A. D. Adams would estimate the cost for trenching, laying and carting at $13,459.85, or below the actual cost paid by the City in the amount of $14,330.37. The average price per foot for labor for the pipe applied by Mr. A. D. Adams to the Gas Company was 15.72c,

as against the City's cost of 32.46c. It would be necessary to add to Mr. A. D. Adams' estimated cost 106.5 per cent to bring it up to the actual cost incurred by the City. Mr. A. D. Adams cut the value of the Company's property in two and returned a valuation of about one-half the actual value of the Company's property by the same method employed by him in reducing the estimated value of the distribution system to one-half of its actual value.

Now it appears that when the Company produced the cost record of the City for laying water mains and introduced them in evidence it developed in the examination of Mr. Schmidt (Transcript, p. 827), the young man from the water department, that Mr. A. D. Adams had been furnished a copy of this cost record about *one year* before he testified; so that at the time Mr. A. D. Adams took the stand and presented his estimated valuation of the Company's property and introduced in evidence his tabulations and exhibits on the cost of gas mains, he had had in his possesion for one year the data from the water department showing the *actual cost* for laying mains to be over twice the amount of his own estimate. Instead of alluding in some way to this data of the water department and explaining why he had not followed it, he ignored it completely in his testimony and failed to mention that he even knew of its existence. But, on the contrary, he produced in support of his estimated cost for mains certain contracts for two concrete reservoirs and a contract for water mains in the town of De Witt. But he maintained a discreet silence as to the fact that he had in his possession the labor costs incurred by the City of Lincoln in laying its water mains on the opposite side of the street from the company's gas mains. If this is not suppressing evidence we confess we do not know the meaning of the phrase. But furthermore, after the

company had procured and introduced these City records in evidence and had brought out the fact that copies of them had been in Mr. A. D. Adams' possession during his testimony, he admitted the fact, but pleaded that he had not had time to analyze the cost and prepare an exhibit (Transcript, p. 1088). However, if the Court will examine Exhibits "402-5" (Transcript, p. 2032 *et seq.*), inclusive, which are copies of the summary in the record of the water department, it will appear at once that a correct analysis can be made of the labor cost as carried separately and the unit cost *in five minutes* for each year. And yet Mr. A. D. Adams had this data in his possession for one year before he testified, and still had not time to make such an analysis. This fact alone stands as an impeachment of his testimony, and when we also consider the fact that this data from the water department showed the exact cost of laying mains under the precise conditions in which the gas mains are laid and that such cost is more than twice as large as Mr. A. D. Adams' estimated figure, we must conclude that there is no moral responsibility behind his estimates.

(2) Mr. A. D. Adams produced what he deliberately labeled a statement of the labor cost for trenching in sewer construction "as compiled by Adna Dobson, City Engineer" (Transcript, p. 1201). This exhibit upon cross examination was shown to be without any value and misleading, if not a deliberate attempt to deceive. The City, during the period covered by the exhibit, did all of this work under contract for the completed job. The contracts were let by the City for the construction of the sewers complete and there was nothing in the contract to tell how much was paid by the contractor for labor or how much for materials. The witness when confronted with this situation said that the labor cost

in his exhibit was his estimate and that he used the contract showing the total cost for labor and materials as a guide to him in estimating the cost of the labor (Transcript, p. 1223). He testified that he did not inquire of the contractors who did the work to learn of their experience or concerning what proportion of the total cost was incurred for labor in constructing the sewers. The exhibition of those estimated costs as coming from the city engineer's office under the label of labor costs for sewer construction, as shown by the records in the city engineer's office, was misleading, until there was written all over those exhibits by the testimony, the fact that they simply represented the estimates of Mr. A. D. Adams for labor costs basd upon contracts for completed work in which the labor costs were not segregated. The exhibits were absolutely without value. The witness could have estimated the labor costs on the sewers with or without those contracts before him equally well. His purpose was to give weight to his estimate by labelling them as something from the City Engineer's office.

(3) As to the value of real estate, on which a gas plant is situated, Mr. A. D. Adams states that he takes 2½ cents per square foot as a true measure of value irrespective of the market value. His testimony is as follows:

> "I may have said that, taking cities of somewhere near this size, that 2½c. a square foot is more than has been paid in recent years for land occupied by gas plants. The answer previously given by me being read—I testified to that. I know about 2½ cents generally is the price." (Transcript, p. 1077.)

The witness stated that the value of real estate for gas plant purposes had been the subject of long observation and study on his part and particularly in the Commonwealth of Massachusetts; that he found from such observation and study that 2½ cents per square

foot was a fair price for such real estate; his attention was directed to his testimony in the Haverhill case on the same subject, in which, basing his knowledge upon like observation and study, the witness stated that he found 15 cents a square foot to be the fair price (Transcript, pp. 1078, 1080); that the value of the land on which the Haverhill plant was located was from $1.00 to $1.50 a square foot—that is the market value, and notwithstanding this fact he concluded to allow the Company 15 cents a square foot as the value of real estate, and undertook to justify a valuation of 15 cents a square foot as against a market value of from $1.00 to $1.50 a square foot (Transcript, p. 1078).

(4) It developed in the course of the hearing that Mr. A. D. Adams had previously testified in valuation cases at Racine, Wisconsin, and Cedar Rapids, Iowa, before he testified at Lincoln. That he had given in his testimony at Racine the assumed life of brick buildings at 100 years; at Cedar Rapids, 80 years, and at Lincoln, 66.6 years (Transcript, p. 1266). That he had given the assumed life at Racine of gas holders at 100 years; at Cedar Rapids, 80 years, and at Lincoln, 66.6 years; that he had given the assumed life of coal gas benches at Racine at 50 years; at Cedar Rapids, 40 years, and at Lincoln, 33.3 years; condensers and scrubbers at Racine at 50 years; Cedar Rapids at 40 years; Lincoln, 33.3 years (p. 3717); mains, Racine, 100 years; Cedar Rapids, 80 years; Lincoln, 50 years (Transcript, pp. 1101-7). Similar differences on other corresponding items of equipment were shown to exist between his testimony in Racine, Cedar Rapids and Lincoln. He testified:

> "Q. Do you recall now where you got the information upon which you based or assumed the estimated life of the equipment at Racine? A. I got it mainly from plants in Massachusetts" (Transcript, p. 1266).

* * * * * * *

"Q. In Cedar Rapids case you brought the buildings from 100 years in Racine to 80 years in Cedar Rapids and in Lincoln you brought it to 66.6 years? A. Oh, yes; which shows that it is consistent" (Transcript, p. 1266).

When these facts were brought to the attention of the witness he insisted that he was growing more conservative in his assumed life of gas plants and equipment and that these variances showed that he was consistent and conscientious. But it was then made to appear that he testified in Cedar Rapids in 1907, Racine, 1909, and Lincoln, 1913. So that his assumed life for a gas holder, for instance, increased from Cedar Rapids, 80 years, to Racine, 100 years, and then fell off again in Lincoln to 66.6 years; and the same was true of his life assumption as to other equipment. Of this he said:

"Q. Is there any standard recognized by engineers as the normal life of equipment such as is found here? A. I haven't been able to discover any uniformity in that regard.

"Q. The engineers don't agree? A. I think that is true.

"Q. Some engineers don't even agree with themselves? A. That might be true, a conscientious engineer sometimes changes his opinion.

"Q. And the oftener he changes his opinion the greater the indication that he is conscientious? A. I should want to know all the facts in regard to that.

"Q. Suppose a gentleman who is an expert testified in Racine, Wisconsin, and gave the life of equipment materially different from what he has given it here, and also testified in Cedar Rapids, Iowa, and gave the life of the equipment the same as this here different from the life he gave for this equipment, would you assume that to be an indication of conscientiousness? A. It might or might not be; I should have to know more of the facts" (Transcript, p. 1266).

Is the testimony of the witness—an expert witness, whose conclusions are subject to such unaccountable variations, entitled to be considered seriously by any Court or Judge?

(5) In Exhibit "210" (Transcript, p. 1419) Mr. A. D. Adams purports to show the weight of pipe, as shown by certain pipe bills of the Company, and, as a result of his tabulations of picked bills for pipe since 1901, shows 4-inch pipe in the amount of 55,788 feet with an average weight of 18.8 pounds; 6,408 feet of 6-inch pipe with an average weight of 31.4 pounds; while he used 17 pounds per foot for the 4-inch pipe and 30 pounds for the 6-inch pipe (Transcript, p. 1110). And parallel in time Mr. A. D. Adams testified in Haverhill, Massachusetts, to a weight of 17.5 pounds per foot for the 4-inch pipe prior to 1901 and 19.4 pounds per foot for the 4-inch pipe subsequent to 1901 (Transcript, p. 1133). In view of the fact that the witness testified to one weight here and another at Haverhill, and both within the same period, we are unable to determine which of the two weights given by the witness he believed to be correct, if either. Time intervened in respect of his testimony as to the life of equipment at Racine, Cedar Rapids and Lincoln, which fact he used as an excuse for the variation. But this is not the case in respect to the weight of pipe. As to this variation he does not even attempt to give an explanation. It is apparent that the attempt to save on the weight of the pipe is an attempt to save in the cost. The pipe in stock in the Company's possession was weighed on the scales, tested by the City's weighmaster before the witness testified. Notwithstanding such weight, the witness estimated the 4-inch pipe at 17 pounds a foot, when it actually weighed 19.7 pounds. And the 6-inch pipe at 30 pounds per foot, when it actually weighed 31.17 pounds; and he estimated the 55,788 feet of 4-inch pipe, shown in the bills included in

his Exhibit "212" (Transcript, pp. 1110-11), purchased since 1901; weighing 18.8 pounds at 17 pounds, and estimated the 6.408 feet of 6-inch pipe, shown in the same exhibit, weighing 31.17 pounds, at 30 pounds. If the witness was unwilling to accept the statement of the U. S. Cast Iron Pipe & Foundry Company, the Sheffield Cast Iron Pipe & Foundry Company, and the Massillon Iron & Steel Company as to the weight of pipe, at least he ought to have accepted the weights shown by actual test. We have no doubt that if the witness had estimated the weight of the pipe above that shown by actual weight or by the statement of the pipe companies, that he would have been satisfied upon that evidence of weight to have instantly reduced the amount of his estimate, or, in other words, that an error so apparent in his estimate would have been corrected by him immediately and brought into harmony with his estimate of 19.4 pounds for the same size of pipe at the same time at Haverhill. The net saving in his estimate by reducing the weight of the pipe per foot, as determined by an extended computation, is 353,556.26 pounds, or about 177 tons of cast iron pipe.

(6) It will be remembered that the greatest source of Mr. A. D. Adams' knowledge of gas properties comes from the Massachusetts returns. He so testifies himself:

> "I have resorted extensively to these returns in the office of the Massachusetts Gas Commissioners to aid me in forming an opinion among other things as to the amount of cost to the Lincoln Company for the various salaries, office and distribution and general expenses of the Lincoln Company apart from its cost of materials and labor involved in making gas and apart from its taxes" * * * (Transcript, p. 992).

Let us see what the record discloses as to how Mr. A.

D. Adams applied the information so gathered from the Massachusetts returns.

He estimates as the proper amount of expenditure for salaries, office, distribution and general expenses for the period 1907 to 1912, inclusive, an average of .1254 per thousand cubic feet of gas sold (Exhibit "342," Transcript, pp. 1592, 1152); as against an actual average expenditure of .2602.

This difference in cents per thousand cubic feet for the period of 1907 to 1912, inclusive, amounts in dollars to $168,592.42. We challenged the competency of this estimate as against the actual expenditures, as shown by the company's books, and we directed the Master's attention to a consideration of the Massachusetts returns, from which Mr. A. D. Adams says he reached his estimate.

Referring to Exhibit "425-V" (Transcript, p. 1392), the Court will note the expenditures of the Massachusetts company for "salaries, office, distribution, and general expenses" in cents per thousand for the year 1911, as follows:

> "Boston, .12367; Brockton, .25321; Cambridge, .13361; Charleston, .11529; East Boston, .20962; Fall River, .16418; Haverhill, .48407; Lawrence, .12062; Lowell, .18419; Lynn, .17054; Malden, .21094; New Bedford, .18362; Newton, .22593; Pittsfield, .24704; Salem, .19547; Springfield, .18330; Suburban, .24633; Taunton, .14671; Worcester, .07172."

For the year, 1912, as follows:

> "Boston, .11232; Brockton, .25800; Cambridge, .12730; Charleston, .10391; East Boston, .19153; Fall River, .13380; Fitchburg, .35039; Haverhill, .30054; Lawrence, .12639; Lowell, .20312; Lynn, .10139; Malden, .15879; New Bedford, 18569; Newton, .22812; Pittsfield, .21865; Salem, .19852; Springfield, .19927; Suburban, .24199; Taunton, .14485; Worcester, .08596" (Exhibit "425-V").

Assuming that Mr. A. D. Adams made a study of the expenditures of the Massachusetts companies, as shown by their returns, for salaries, office, distribution and general expenses, would a study of that item of expense qualify the witness to substitute an estimate of his own, or would his qualifications be limited to producing the results as shown by the reports of the Massachusetts companies with respect to this item? We have taken the burden of producing here in this brief the item of expense involved by the various Massachusetts companies for salaries, office, distribution and general expenses for two years, 1911 and 1912. The court will find in Exhibit "425-V" the abstract showing the expenditures of the Massachusetts companies for this item for the years 1909 to 1912, inclusive. A reference to the item for those years and for all of these companies will show that Mr. A. D. Adams disregarded the experiences of the Massachusetts companies and produced an estimate in this case which does not represent the experience of a single one of the Massachusetts companies. For instance, Haverhill for the year 1911 expended for salaries, office, distribution and general expenses, .48407 per thousand cubic feet of gas. Mr. A. D. Adams in the face of that showing estimates 12 cents per thousand for the Lincoln Company, and criticises an average expenditure of the Lincoln Company for this item since 1907 of .2602. Newton expended .22593 for this item in 1910; Pittsfield, .2704; Brockton, .25321; East Boston, .20962; Malden, .21094; Lynn, .17054. In 1912 Haverhill expended .30054; Fitchburg, .35039; Newton, .22812; Pittsfield, .21865; Surburban, .24199; Brockton, .2580; East Boston, .19153. No expert calculator can take the results of the Massachusetts companies and reach the average figure of .1254 or the figures for 1912 of .12. There is no amount of calculation or no combination of results of the different Massachusetts companies on this

item that will sustain any such absurd estimates. If Mr. A. D. Adams has undertaken to give the results of the experiences of the Massachusetts companies then his conclusions are disproved by an abstract of the returns of those companies offered here in evidence. Why say that 12 cents for this item is proper, based on a study of the Massachusetts companies, when for the same years Haverhill expended over 30 cents and the witness was fresh from testifying in the Haverhill case? It requires more than an expert witness or calculator to approximate 12 cents as a result of the experience of the Massachusetts companies. It takes one who deliberately misinterprets the experiences of those companies to arrive at a figure of 12 cents. The actual figure for that item from the Massachusetts reports completely destroys Mr. A. D. Adams' estimate. It is clearly shown in this record that Mr. A. D. Adams does not know what would be the proper amount for such expenditures except as he may have learned it from a study of those returns. And a study of those returns, which were before the Court so that opportunity for an unbiased and honest inspection was offered, proves that his estimate could not possibly have been based upon said returns.

We submit that as a statistician or otherwise his estimates are discredited by the experiences of the Massachusetts companies; and this fact explains the attempt of the witness near the close of the hearing to impeach the value of the Massachusetts reports and allege that they were dishonestly prepared as the result of corrupt practices on the part of the Massachusetts companies.

If these returns are as valueless as the witness claims them to be, we maintain that the attempt of Mr. A. D. Adams to support his estimates by reference to those returns at the outset of the hearing was a deliberate attempt to deceive the Court.

(7) But in spite of all we have said about Mr. A. D.

Adams, the City's expert witness, nothing he said or did at the hearing can be compared, in consummate absurdity, with the final result he reached. After all his figuring and estimates, his half-truths and concealment, his biased attitude and vindictive cross examination, his deliberate misrepresentation of the Massachusetts returns, and his utter lack of experience as a practical engineer, he reaches a result which brands his entire testimony as unworthy of serious consideration. He concludes that the total present value of the company's investment is $415,208. Now, the city, whose witness Mr. A. D. Adams is, has continued to demand from the company a return of 20 cents per thousand cubic feet of gas sold since January 1, 1907, the date the rate ordinance went into effect, and the company has been compelled to put up a bond for the return of said amount pending the outcome of this suit. The City has also levied an occupation tax against the company, judgment for which had already been entered in the state court. Calculating interest and penalties to July 1, 1914, the City was demanding from the Company the total sum of $430,296.27. In short, the City demands $430,296.27 from the Company, which since 1907 has not paid a dollar in the way of dividends or profits to stockholders, and whose net earnings have been devoted entirely to the cost of manufacturing and distributing gas and making payments of its interest charges. Coincident with this demand for the sum of $430,296.27, the City presents a witness who says the present value of the Company's property is $415,208, so that the net result of the operation of the company for seven years, from 1907 to 1914, is that the entire value of the Company's property will be wiped out and the Company will still owe the City $15,088.27. This is the conclusion of the witness whom the City asks the Court to believe.

The net results of the City's claim is so astounding

that a Court cannot fail to be impressed by the fact that this entire proceeding seems to be a deliberate attempt to confiscate the Company's property.

Now the Master does not make clear in his report how he treats the testimony of Mr. A. D. Adams, or how much weight he attaches thereto. He failed completely to express himself on that point. However, in many instances in his report he quotes Mr. A. D. Adams' figures, which would seem to indicate that he has taken Mr. A. D. Adams' estimates into consideration. Furthermore, practically all of the Master's values are placed (haphazard, it would seem) somewhere between the values submitted by Mr. Lea for the Company and the values given by Mr. A. D. Adams. In consequence it is impossible to aviod a conclusion that the Master must have been influenced by the testimony of the City's witness, and that he must have attached some weight thereto.

(*b*) *Henry I. Lea.*

The Company placed upon the stand as its expert witness-in-chief, Mr. Henry I. Lea, of Chicago, Illinois. We do not think it essential to discuss in great detail Mr. Lea's qualifications as a gas engineering expert, because such qualifications were practically unquestioned by the City. We will content ourselves, therefore, in giving a short summary of the experience from which his knowledge of the gas business is derived (Transcript, p. 389 *et seq.*).

Mr. Lea's first experience was obtained with the gas company at Madison, Wisconsin, beginning in the year 1896. The first year his duties were largely of a clerical nature, although he was at the works all the time. The second year he was works foreman and the third year works superintendent of the manufacturing plant. He was at Madison a little over three years. From there he went to Peoria, Illinois, as superintendent of construc-

tion of the new gas plant there. It appears that an opposition company was invading the field at Peoria and tore down some old buildings to provide a site for the new gas plant. Some of the old buildings had to come down and others had to be modified before beginning laying the foundation for the new plant. Mr. Lea was in charge of that work until the new works were installed and the plant was actually making gas. This was a coal gas plant with a capacity of about 650 M cubic feet per day. In connection with that property it was necessary to install all the machinery for the manufacture of the gas and everything in connection with the installation of a plant new. A distribution system was also installed, but Mr. Lea did not have charge of that work. From Peoria Mr. Lea went to Fon du Lac, Wisconsin, in the employ of the same people (Dawes Syndicate) as were interested in Peoria. They bought the Fon du Lac plant and sent Mr. Lea there as superintendent and manager of the property. The plant was a coal gas plant with a capacity of about 100,000 or 200,000 cubic feet per day. Mr. Lea was at Fon du Lac about four or five months and was then sent by the Dawes Syndicate to Ottumwa, Iowa, to extend a distribution system and do some remodeling of the plant. He was at Ottumwa about eight or nine months during which time he took trips to Keokuk, Iowa, to take charge of some minor alterations there that would enable them to make coal and water gas at the same time. After Ottumwa, the Dawes Syndicate then sent Mr. Lea to Evanston, Illinois, as superintendent of distribution the first year, as general superintendent the second year, and as manager the third year, until the Evanston property was purchased by the parties interested in the Peoples' Gas Company of Chicago. The capacity of the Evanston plant was approximately 650,000 cubic feet per day. After the

purchase of the Evanston plant, Mr. Lea, at his own request, was employed by the Division Street Station, one of the plants operated by the Peoples' Gas Light & Coke Company of Chicago. That plant was sending out between nine million and ten million feet a day, which was all water gas. When Mr. Lea left the Division Street Station he went to Ft. Wayne, Indiana, as assistant to the president and chief engineer of Western Gas Construction Company, which was devoted exclusively to building gas works apparatus in the nature of condensers for coal and water gas and coke oven gas plants, and the like. This company has shops in Ft. Wayne, employing 450 men, consisting of pattern shops, foundry, forge, blower and machine shops. The company manufactured gas holders, purifiers, condensers, washers, scrubbers, both rotary and static, and in fact practically everything that goes into gas works equipment, except small steam engines and blowers. Mr. Lea remained at Ft. Wayne about a year and a half or two years and then went to Pittsburg for Mr. George Westinghouse in an experimental gas works which had been put up for the purpose of developing gas producers for developing power to be used in the place of steam engines. Of this, Mr. Lea said:

> "This plant had not reached any successful commercial stage, and I was placed in charge of the work; I had to build my own organization and had no limit on men, methods or money. While there, I brought out three types of producers that are now being sold by the Westinghouse Machine Company. When I left Pittsburg, we had eleven producers gas plants, of my design in successful operation outside of Pittsburg" (Transcript, pp.. 389-90).

After Mr. Lea left the Westinghouse people he opened an office as consulting engineer in Chicago, which is his present business. When asked his experience in valuing

gas properties and determining the rates of sale or purchase, Mr. Lea testified:

> "I have made valuations for banks, bond houses, gas companies and individuals of properties having reproduction cost today of more than $110,000,000. My work has been in something over seventy different cities. I have also made other examinations for companies who were having operating difficulties; the difficulties in their plants; and I have made examination of properties to determine whether changes in method of equipment would be advisable." (Transcript, p. 390.)

Mr. Lea is a man of unquestioned integrity and widespread reputation in the gas business. His authority to speak as an expert on all matters connected with the gas business is unquestioned.

(*c*) *W. F. Brodnax.*

Mr. Brodnax (Transcript, p. 497) is a gas engineer who made a detailed inventory of all of the company's property. Mr. Brodnax enjoys a high reputation in the gas business. His qualifications as an expert fitted to make this inventory were not questioned at the hearing before the Master. In fact, his inventory was used alike by both parties to the suit. He is one of the two witnesses concerning whose qualifications the Master comments on. The Master said:

> "The property was inventoried by Mr. Brodnax, an employe of the company and a gas engineer of long experience. The work seems to have been done with unusual thoroughness" (Transcript, p. 37).

The Master then makes another statement, which is not quite in accordance with the facts. He said, referring to the inventory of Mr. Brodnax:

"The only error discovered in the course of the long trial was one of inclusion; there were none of exclusion" (Transcript, p. 37).

In order that this misstatement of the Master may be corrected without further misunderstanding, we beg to point out this so-called "error of inclusion" was not such, but was merely a mathematical error in addition occasioned by incorrectly carrying a balance from one page to another in footing the figures representing the length of mains.

Mr. Brodnax's qualifications as an expert may therefore be deemed to be admitted.

(*d*) *Witnesses on Real Estate Valuation.*

The Company introduced the testimony of the following witnesses on the question of real estate valuation: Mr. E. W. Reed, Mr. William A. Green, Mr. C. J. Culbertson, Mr. J. R. Purbaugh.

*Mr. Reed* is employed by the State Railway Commission as right-of-way valuer and statistician. He has handled real estate for ten or fifteen years, particularly at Holdredge, Nebraska, and for the last three and a half years has been employed by the Railway Commission exclusively on right-of-way valuations (Transcript, p. 556). He states further, concerning what study of real estate values he has made in the City of Lincoln:

"I have made an exhaustive study of real estate values in Lincoln and obtained my information from going over very carefully the existing values of property in all parts of the city; by talking with the county assessor and city tax commissioner and real estate men and by observing closely the property which is listed for sales and the prices which are asked and the prices which are obtained upon real estate sales in the city." (Transcript, pp. 556-7.)

* * * *

"I have made returns to the commission upon all the land owned by the various railroads and occu-

pied by them as their terminals in this city." (Transcript, p. 1267.)

* * * *

"I made an appraisal of the real estate, the land or lots owned by the Lincoln Telegraph & Telephone Company."

* * * *

"Q. Have you appraised any portion of block 77? A. Yes, sir; there is .11 of an acre which belongs to the Burlington railroad in block 77." (Transcript, p. 1267.)

"Q. Have you appraised any property adjacent to block 79? A. I have appraised blocks on three sides of it, I think." (Transcript, p. 1267.)

*Mr. William A. Green* is in the real estate business in Lincoln and has been for about 25 years. He swears that he is acquainted with the fair market value of real estate throughout the city and has been so acquainted with those prices during the last six or seven years. (Transcript, p. 559.)

*Mr. C. J. Culbertson* is in the real estate business in Lincoln and has been for more than 20 years. He swears that he is acquainted with the market value of real estate throughout the city. (Transcript, p. 560.)

*Mr. J. R. Purbaugh* is in the real estate business in Lincoln and has been for four years. (Transcript, p. 561.)

All of these men are, we submit, qualified by actual business experience to give the court the closest approximation to the actual market as is possible in estimating real estate values; and their figures are so nearly in accord that the conclusion must necessarily be drawn that they are speaking with knowledge of the facts.

Opposed to these men the City has introduced the testimony of the following witnesses, who are, the City claims, experts on real estate values in Lincoln. They are:

John Lebsock, Henry J. Amen, George Hagensick and

George P. Monagan. The qualifications of these men as experts on real estate valuation can best be determined by an examination of some of the material portions of their testimony, from which will be disclosed that they knew very little about the value of real estate in Lincoln and their values were found by the Master as "obviously too low."

(c) *Witnesses on Rate of Return.*

The Company introduced the following witnesses, whose testimony was given relative to the market value of securities of the same general nature as the securities of Lincoln Gas & Electric Light Company and as experts regarding the rate of return demanded by investors in such securities.

*John E. Miller,* director of the First National Bank, and for some years a director in the City National Bank, who is engaged in the general merchandise business. (Transcript, p. 585.)

*Frank H. Woods,* president of the Lincoln Telegraph & Telephone Company, which company has total assets of about six million dollars. Mr. Woods is also one of the owners of Woods Bros. Silo & Manufacturing Company, a director of the First National Bank, and a stockholder in many industrial corporations. (Transcript, p. 578.)

*M. W. Folsom,* president of the Nebraska State Bank, and at one time secretary of the Nebraska Central Building & Loan Association. Mr. Folsom owned for a short time the Capital Beach & Milford Railroad Company, which operated a street railway between the city and Capital Beach. (Transcript, p. 576.)

*C. B. Towle,* vice-president of Curtis, Towle & Payne Company, a firm which does between $500,000 and $1,000,000.00 worth of business annually. (Transcript, p. 579.)

*E. B. Sawyer,* president of the Cushman Motor Works, whose business extends to all parts of the world (Transcript, p. 580).

*J. D. Lau,* secretary and treasurer and general manager of the H. P. Lau Company, a corporation engaged in the wholesale grocery business and transacting over a million dollars of business annually (Transcript, p. 581).

*P. L. Hall,* president of the Central National Bank, and formerly cashier of the Columbia National Bank (Transcript, p. 581).

*C. H. Beaumont,* cashier of the Nebraska State Bank (Transcript, p. 583).

*Silas H. Burnham,* president of the First National Bank; formerly cashier then president of the American Exchange National Bank of Lincoln (Transcript, p. 587).

*Frank W. Frueauff,* member of the firm of Henry L. Doherty & Company, New York City, public service financiers and operators, president of Denver Gas & Electric Light Co. and president of Lincoln Gas & Electric Light Company (Transcript, p. 777 *et seq.*).

The Company has introduced the testimony of the witnesses above enumerated with a view to place before the Court the average opinion of men engaged in large utility, commercial and banking enterprises, so that the Court in reaching its decision should have at its command ample information with regard to the rate of return demanded by investors in securities such as those of the Lincoln Gas & Electric Light Company.

The City introduced no testimony whatsoever on this subject, except that of Alton D. Adams.

(f) *Witnesses on Valuation of Buildings.*

Beside Mr. Lea, the Company placed upon the stand the following witnesses, whose testimony was introduced as to the valuation of the company's buildings:

*C. P. Hahn,* of Lincoln, a general contractor who has been in that business in Lincoln since 1881. He is the man who built three of the company's buildings, one of them, the generator house, since 1907, and who could testify as to the actual cost on the very buildings in question, as well as give his opinion based on experience (Transcript, p. 1272).

*Ellery Davis,* of Lincoln, an architect, of the firm of Berlinghoff & Davis, which firm has under contract and under construction buildings approximating $2,000,000.00 in value (Transcript, p. 539). As to his qualifications, he testified:

> "Q. Where did you recive your technical education? A. At Columbia University in New York City.
>
> "Q. About what experience have you had in estimating the cost of buildings here in the City of Lincoln? A. It is our custom to make guaranteed estimates of the cost of the work for which we prepare plans.
>
> "Q. To about what extent have you done that sort of work since you have been with this firm? A. For the past six years I have been with Mr. Berlinghoff in his employ and later as a partner and we have estimated beforehand all the buildings we have built, and our estimates in the main have been verified by the figures for the actual cost" (Transcript, p. 1271).

*George K. Abel,* of Lincoln, of the firm of Abel & Roberts, contractors and excavators, who do a great deal of paving for the City and have had large experience in removing dirt in connection with that work (Transcript, p. 547).

*Robert Malone,* of Lincoln, a contractor engaged for some years in the business of public construction, railroading, dirt removing of all kinds and concrete moving (Transcript, p. 538).

In opposition to these men the company offered as wit-

nesses as to the valuation of buildings the following persons: W. J. Assenmacher and James G. Matthews.

Mr. Assenmacher was called as a witness for the City and testified (Transcript, pp. 1230-1242, 1243-4, 1246) that he spent about eight hours in taking measurements and checking up the buildings; that he had no plans and specifications and did not refer to the details as shown in the Brodnax inventory. Mr. Perry Hahn, the contractor who built portions of the Purifying House and portions of the Generator House, was a witness for the company. He had been a public contractor in the City of Lincoln since 1881, and for about thirty-two years has been actively engaged in constructing buildings in the City. He refers in his testimony to the fact that he had built from 75 to 80 important buildings in this City, including the Burlington freight house, Missouri-Pacific station and the Orphanage Home for Bishop Bonacum. His testimony is not referred to in the record of the Master. Mr. Assenmacher had lived in Lincoln about eight years, and during the last seven years had been a general contractor. Mr. Assenmacher did not agree with Mr. Brodnax in the matter of the dimensions of the Purifying House, the thickness of the brick walls, thickness of the stone walls, the number of cubic yards of excavation, the number of brick in the building, or the quantities of other materials. The same is true with respect to the Generator House, Retort House, Booster House, Oil Tank House and Meter Shop.

The Broadnax inventory, which contained the quantities of materials in the buildings, was found by the Master to be correct. The Assenmacher estimate of quantities of materials were at great variance with the Brodnax inventory, and must have been found to be incorrect by the Master.

In his first figure on the Purifying House, Assenmacher had 1,000 cubic yards in excavation; stone wall, 10

feet, 6 inches in height, and had no figure for cost of stairways, gutters, down spouts, plastering, electric wiring, or for the cost of plans and specifications, which he subsequently estimated at 3 per cent of the cost of the building; no details of any steel in the roof, indicating that there were just a few rods, which he had included in the lumber item. On a re-examination of the building, at the request of the Company, he found steel trusses in the roof; found the excavation to be 1,463 cubic yards; found the stone wall to be 11.3 feet high, but refused to change his figure as originally given. In his estimate for the Retort House, he figured a shingle roof, giving the number of M. shingles, but discovered later that the building did not have a shingle roof. In his original figure he had not taken into account the concrete floor in the basement, and did not know that there was one, but refused to change his original figures. In the Generator House he originally estimated 12 cubic yards of concrete in the footings. On discovering that there was 410 feet of wall, he increased the number of cubic yards of concrete for the footings, but stood by his original estimate of cost. He produced a figure of $3,308 net construction cost for the Generator House, as against an actual cost shown by the records of the Company of $4,551.51. The Generator House was built in 1907. Mr. Assenmacher estimated 45 cubic yards of excavation for the Oil Tank House. The house was 35 ft. 3 in. by 24 ft., and was 10 feet from the top of the ground to the bottom of the pit. The roof came down to a level with the ground. Notwithstanding this situation, Assenmacher testified to a flight of six or seven steps leading up to the door entering the Oil Tank House (2191). He refused to make any change in his original estimate of the cost after a re-examination and after being advised as to the character of the structure involved. He estimated the cost of the Booster House at

33d street without being able to get inside of the house. He testified that he looked through the window and could see down into one corner of the basement. He had no brick in the foundation, while the Brodnax inventory showed 5,829 brick. He showed a net construction cost of his original figure of $471.25, as against $721.00 shown by Lea, and refused to make any change in his figures. In none of the buildings did he estimate any cost for piping for water, and his estimated cost of the brick in the Generator House, built during the pendency of this suit, was $7 a thousand, as against an actual cost to the contractor of $7.50. The testimony of Assenmacher as to the cost of these buildings was on a par with the testimony of the witness, Matthews, presented by the City for the purpose of showing the cost of excavation. It was valueless and ought not to have found its way into the report of the Master. The contractor, who constructed the brick portions of the buildings and the record of the actual cost of the buildings to the Company, should have been shown in the Master's report, if the cost of the buildings was to be considered as a factor showing present value.

Mr. Matthews proved, upon examination, to know so little about the subject on which the City attempted to qualify him as an expert, that the weight of his testimony was, to say the least, negligible. Whatever of value there was to the evidence introduced through him, merely tended to corroborate the Company's witnesses; and this fact was so obvious that the Master, upon the completion of Mr. Matthews' testimony, remarked that the expense of introducing said testimony ought to be charged to the Company.

(g) *Witnesses on Valuation of Works Equipment.*

Besides Mr. Lea, the company placed upon the stand the following witness, whose testimony was introduced

as to the valuation of the company's works equipment:

*Edward M. Steinmueller* (Transcript, pp. 516 *et seq.*), who is at present connected with the Western Gas Construction Company. That company manufactures and installs everything for a gas plant. He testified as to his own qualifications that he has been connected with the gas business for twenty-five years. For eighteen years he had been with the firm of Bartlett, Haywood & Company, who are manufacturers of the larger equipment used in gas plants such as gas holders and appliances for the manufacture of coal gas. They are the only concern who manufacture for instance the larger gas holders from five to fifteen million feet capacity. Mr. Steinmueller was connected with said firm from 1889 to 1906. He commenced as assistant to the general manager and afterwards took care of the estimating and part of the sales; that is, estimating the value of the different apparatus entering into the construction of the plant. In 1906 he became associated with Cruse-Kemper, of Philadelphia, manufacturers of plate metal works, connected with gas works, such as gas holders, steel purifiers, oil tanks and works of that character. The witness was the manager of that plant during which time he did the designing for the construction of the equipment that firm manufactured. In 1908 Mr. Steinmueller went with the Kerr-Murray Manufacturing Company of Ft. Wayne, Indiana. This firm built, designed and installed coal gas equipment, gas holders, condensing apparatus, purification apparatus, iron works for benches, etc. In fact, they are practically the oldest manufacturers of gas works equipment in this country. Mr. Steinmueller was the assistant to the general manager and had charge of the engineering department designing equipment. In 1909 he went with the Chicago Bridge & Iron Works, which firm decided

to enter into manufacture of gas holders. During his connection with this firm he provided them with designs and details of every description and secured contracts and equipped and installed during his stay with them about eleven holders. In 1911, he became associated with his present company, the Western Gas Construction Company, and was at the time he testified the manager of their eastern territory with headquarters in New York City. This company supplies the entire North American continent and is in competition with all the manufacturers of gas equipment therein.

This witness has so equipped himself by his long training to qualify as an expert in valuing gas equipment that there can not be the slightest question as to his qualifications as such. As to his attitude and bearing during the taking of his testimony at the hearing it is worthy to comment that counsel for the City personally remarked upon his perfect fairness.

Beside the testimony of Mr. Lea and Mr. Steinmueller, on the valuation of the Company's works equipment, the company introduced, through the witness O. R. Mallat (its purchasing agent) evidence of the actual price which the Company had paid for its equipment in recent years.

The City introduced no testimony on this subject except that of Mr. A. D. Adams.

(h) *Witnesses on the Valuation of the Distribution System.*

Beside Mr. Lea, the Company placed on the stand the following witnesses, whose testimony was introduced as to the value of the Company's distribution system:

*George L. Campen,* whose qualifications to testify as an expert are as follows (Transcript, p. 527): He has held the office of Assistant City Engineer, City Engineer, Sewer Engineer, Sewer Inspector, Plumbing In-

spector, Building Inspector and Superintendent of Public Works of the City of Lincoln. This was all between the years 1891 to 1898 and 1901 to 1906. He was the Superintendent and Water Commissioner for the canal zone on the Isthmus of Panama, and Assistant City Engineer of the City of Omaha for three years. As City Engineer of Lincoln he had charge of the construction of the paving. The greater portion of the business district of the city was paved while he was City Engineer. During his service in these various capacities he had acquired accurate knowledge as to the values and weights of mains.

*Wilber C. Sunderland* (Transcript, p. 564), who has been connected since 1907 with the Western Supply Company, engaged in the business of wholesale plumbing, steam supplies and water goods, which includes pipe fittings and steam valves of all sorts.

Robert Malone and George K. Abel, above referred to, testified as to the cost of excavation.

The City introduced no testimony on this subject except that of Mr. A. D. Adams.

(i) *Witnesses on Amount of Overhead Charges and "Going Value."*

Beside Mr. Lea, the Company placed upon the stand the following witnesses, whose testimony was introduced as to overhead charges and "going value."

*L. E. Wettling*, a public accountant, who has been in the employ of the Nebraska State Railway Commission and the Attorney General of Nebraska since 1906 (Transcript, p. 793). He testifies:

> "I have had much experience with the analysis of accounts of public utilities and an analysis of valuation figures and contentions generally that come in litigations and hearings on matters of that nature before the Nebraska State Railway Commission and

before the courts in several rate cases and tax cases" (Transcript, p. 1271).

In connection with his profession he has had access to the original records, accounts and vouchers of public utility companies as well as the exhibition of that information in hearings before the commission and the courts.

"I have had occasion to refer to tax books, law books and reports of commissions in various states in the Union generally" (Transcript, p. 1271). * * *

"Q. Outside of your specific duties for the Railway Commission proper, have you had occasion to examine the testimony offered in railroad rate cases and the like of that? A. I have; and have assisted in the analysis and writing of briefs in several cases.

"Q. Does that include the famous case of *Shepperd* v. *The Great Northern* in the circuit court of Minnesota, the so-called Minnesota-Missouri rate case? A. I wrote an *Amicus Curia* brief in the Missouri rate case" (Transcript, p. 1271).

* * * * * * * *

"Q. How long have you followed the vocation of a public accountant? A. For most of all the time since 1885 * * *" (Transcript, p. 1271).

While associated with the Farmers & Merchants Insurance Company, which company had been an investor in the securities and stock of the Lincoln Gas Company, he had, as representative of the insurance company, become a member of the board of directors of the Lincoln Gas & Electric Light Company, and in his capacity as a director had kept in touch in a general way with the affairs of the Gas Company.

In conjunction with his work for the Railway Commission of Nebraska, he kept in close touch with the engineering department of said commission.

"Q. You are entirely familiar with the practices of the companies and different theories which obtain

in matters of valuing a company? A. Yes, sir.

"Q. As held by engineers, courts and commissions? A. Yes, sir.

"Q. And as experienced by public utility companies in actual practice? A. Yes, sir" (Transcript, p. 1271).

*E. C. Hurd,* who is in the business of engineering, for the past five years has been in charge of the valuation of the utility properties for the Nebraska State Railway Commission, but at the time he testified he was engaged in private practice along similar lines with the firm of Hurd, Gerber & Wettling (Transcript, p. 812). As to his practical experience he said:

> "I have erected several hundred miles of steam railroad, about 50 miles of electric railway, and have engineered four separate electric light and fuel plants and two hydro-electric plants, and have taken part in the business management of an electric property and have done some little work on gas plants, but I don't make any pretense of being a gas engineer, and I have acted in various capacities in the handling of such properties for bankers and brokers" (Transcript, p. 813).

As to his valuation experience he testified:

> "We (the commission) valued the entire railway properties in Nebraska, except street railways; practically all of the telephone properties, and express company properties; and the interurban railway properties; in valuing the steam railroad properties you are valuing almost every conceivable class of property that you can think of, everything connected with the steam railway, even electric light plants, gas plants and all kinds of things" (Transcript, p. 813).

The City introduced no testimony whatsoever as to the method of calculating "going value." Mr. A. D.

Adams was the only witness whose testimony was introduced by the City as to "overhead charges."

(j) *Witnesses on Operating Expenses and Revenue.*

Beside Mr. Lea, the company placed upon the stand the following witnesses, whose testimony was introduced as to operating expenses and revenue and gas properties:

*Frank W. Frueauff*, a member of the firm of Henry L. Doherty & Co., of New York City, and president of the Denver Gas & Electric Light Company and the Lincoln Gas & Electric Light Company. (Transcript, p. 778.) In addition to the qualifications which these positions naturally afford, he testifies as follows:

> "I am a member of the firm of Henry L. Doherty & Company, whose business is the operation, ownership and financing of gas, electric and street railway properties. (Transcript, p. 778.)
>
> * * * *
>
> "We operate about 108 different properties covering from 150 to 175 towns in the United States and Canada." (Transcript, p. 778.)
>
> * * * *

*B. C. Adams*, who, at the time he testified, was general manager and vice-president of the Lincoln Gas & Electric Light Company, and had been connected with that Company since 1906 in various capacities.

The Master describes Mr. B. C. Adams as "an exceptionally efficient and capable man having a thorough technical and general knowledge of the gas business." (Transcript, p. 51.)

*George A. Montgomery*, who was at the time he testified, the manager of the Lincoln Gas & Electric Light Company, and was formerly superintendent thereof. (Transcript, p. 739.)

Aside from Mr. A. D. Adams, the City introduced the testimony of no witnesses whatsoever on operating ex-

penses and revenue, the City's testimony in this regard being confined largely to tabulations of the supposed results of operation as alleged to have been shown by the Massachusetts returns.

We have gone, with some care, into the above discussion of the qualifications of the more important witnesses who testified in this case, and we justify ourselves in taking the Court's time to do so because the Master's report notably fails to enlighten as to the Master's view of the qualifications of the various witnesses or the weight which he attaches to the testimony of each. In a suit of this importance the personal equation is so essentially a consideration that we would not feel that we had fulfilled our duty in aiding the Court in considering the matter by this brief, unless we had summarized the qualifications of the opposing witnesses. It seems to us a fundamental proposition that where experts disagree, the first inquiry of the court should be: Who of the testifying witnesses is best fitted to speak on the matters concerning which he purports to be an expert and on whose opinion is the court justified in relying? Since the Master, in his report, has completely failed to enlighten the Court on this matter we deem it our duty to assist the Court in reaching its own conclusions.

The only inkling which the Master gives in his report as to the general effect which the evidence has on his conclusions is contained in the following language under his heading, "Preliminary Observations":

> "The evidence, which is for the most part opinion evidence and generally unreconcilable, makes my conclusions in regard to values, at best, nothing more than fair approximations." (Transcript, p. 36.)

We submit that, in view of the admission of the Master as above quoted, it is doubly important for him to

have stated whose opinion of all of the witnesses had weight with him. It surely could not have been that the Master struck out blindly in the dark at some valuation between the two expressed by the opposing witnesses. And yet, for all that is contained in the report, we can only conclude that this was the precise method that the Master adopted. We submit that the Master's own statement conclusively establishes the vital importance of discussing the testimony, a duty which the Master has signally neglected. We deem it a self-evident proposition that if two witnesses posing as experts give valuations which are widely divergent, and it appears that one of the experts is grossly incompetent, that any judge of the fact must completely disregard the testimony of the incompetent witness and adhere strictly to the values submitted by the other, or else give good reason why the latter witness' estimated values were not convincing. But merely to pick out at random some figure between the two submitted values, *without explanation*, especially where the competency of one witness is so directly and insistently assailed, is, we submit, a method of determining value difficult to justify.

**It is respectfully submitted that the decree of the Court below should be reversed.**

Respectfully submitted,

EDMUND C. STRODE,
CHARLES A. FRUEAUFF,
Solicitors for Appellant.

## SUBJECT INDEX.

PAGE

STATEMENT OF CASE ..... 1-5

POINT I.—Petition for leave to file bill of review should be made to Appellate Court ..... 5-10

POINT II.—The petitioner has asserted his right at the earliest possible moment and is free from negligence and laches....10-15

POINT III.—The granting of leave to file a bill of review or supplemental bill in the nature of a bill of review is within the sound discretion of the Court, but is granted in all equity cases where justice requires and no mischief is done to adverse parties .....15-20

POINT IV.—The Court below if it dismissed the bill should have dismissed it without prejudice to reinstate the case for subsequent hearing after the one dollar rate had been put to actual trial and test..20-28

POINT V.—In view of the Master's finding as to the company's rate of earnings in 1907, it is of particular importance that evidence of the actual operation of the one dollar rate should be before this Court upon the final hearing of the merits of this appeal .....29-30

PAGE

POINT VI.—The Master failed to report and find as instructed by the Supreme Court of the United States .....30-34

POINT VII.—The granting of the leave prayed for will not hinder or delay the hearing of this cause in its due and orderly course .....34-35

POINT VIII.—Conclusion .....35-36

| LINCOLN GAS & ELECTRIC LIGHT COMPANY, Appellant, *against* THE CITY OF LINCOLN *et al.*, Appellees. | No. 744. |

**Brief of Appellant on Petition for Leave and Right to File Bill of Review and on Defendants' Motion to Advance Cause.**

## Statement of Case.

This case is here pending upon appeal from a final decree upon the merits affirming the master's report and denying an injunction against the enforcement of an ordinance of the City of Lincoln, Nebraska, fixing a charge to consumers of gas of one dollar net per thousand cubic feet.

The decree of the lower Court was absolute in its terms, giving no opportunity to the appellant to reopen the case or to submit to the Court any further evidence or facts as to what the result would be upon an actual trial and test of the rate fixed by the ordinance.

As shown in appellant's petition for leave to file a bill of review, the rate of one dollar per thousand cubic feet, being the rate per thou-

sand cubic feet required by the ordinance in controversy, has been in effect since May 1, 1915, and the practical and important question now involved in said litigation is whether the company should be required to return to consumers, funds collected while the injunctive orders herein were in force, and which question hinges upon the confiscatory character of the ordinance. Realizing that the best test of the confiscatory character of an ordinance was its practical operation, it was the desire of appellant to produce to this Court, for its consideration, at the time of its consideration of the record herein, the actual operations under the ordinance for as long a period of time as could be presented. Appellant was advised that the said cause would not be reached for consideration in this Court for a considerable time, and if the time should be shortened by an order from this Court advancing said cause for hearing, appellant would not be able to present to this Court the actual conditions of operation as above mentioned, in the event that this Court were willing to permit the same to be presented. If, in the opinion of this Court, this hearing involving the repayment to individuals, is one which should be advanced, the appellant does not desire to object to such advancement provided that this Honorable Court will set such advanced hearing for such a time as will, in the event appellant's petition be granted, permit the taking of the testimony involved therein.

This brief is respectfully submitted by appellant on appellees' motion to advance this cause and in support of a petition of appellant for leave to file a bill of review or a supplemental bill in the nature of a bill of review for the pur-

pose of bringing upon the records of this cause, and for a proper determination and decision of this Court upon appeal, a showing of its receipts and earnings and other matters involved in the actual experiment under the one dollar rate placed into effect by the appellant upon the 1st day of May, 1915.

Approximately two years have elapsed since the one dollar rate was placed in effect and this appeal is about to be submitted on the record now on file in this Court, but there is no evidence in the record, as it now stands, as to the effect of the reduced rate upon the sales, revenue and earnings of the company. All evidence and findings of fact in the record, upon that question, being purely hypothetical and not based upon the actual facts as they can be made to appear from the trial and test of said rate since the date of placing it into effect.

The appellant feels under the circumstances and in light of the decisions of this Court in cases involving a reduction in rate, wherein the remunerativeness of the reduced rate was in question, that it is its duty at this time and before the submission of the appeal in this case on the record as it now stands, to call the attention of the Court to the said trial and test and of the results which the period of test shows, and the bearing which the experiment under the reduced rate has had upon the revenue of the appellant for the following reasons:

1.—Such actual knowledge and evidence is now in the possession of the appellant.

2.—The failure or neglect on the part of the plaintiff to call the Court's attention to the said

facts at this time might subject appellant to a charge of laches, neglect and bad faith toward the Court if the decree of the Court below should be affirmed without instructions for further proceedings and thereafter this appellant should petition this Court for leave to file a bill of review in the Court below.

3.—The result of said trial rate would materially aid and assist this Court in its consideration and review of the decree of the Court below.

4.—The review of this case below on such new matter may result in a modification of said decree and avoid the necessity of this Court reviewing the same.

5.—The result of said trial of the one dollar rate is new matter in the nature of newly discovered evidence arising since the decree below and the appeal to this Court, which the appellant could not have produced on the trial of the said cause because the same was not in existence.

6.—The actual trial and test of said rate is the best, most satisfactory and convincing evidence that the reduction in the price of gas per thousand cubic feet did not result in increased consumption sufficient to render the appellant a reasonable return upon its investment, and was not compensatory and would not render a return to this appellant which is compensatory.

7.—It is the established practice of this Court to have before it evidence of the actual operation of a rate ordinance before passing upon its validity, if possible to secure the same.

8.—In view of the master's findings as to the company's earnings in 1907 (the first year in

which the rate ordinance was to be effective) it is particularly important that evidence of the actual operation of the one dollar rate should be before this Court.

9.—The granting of the leave prayed for will not hinder or delay the hearing of this cause in its due and orderly course.

## POINT I.

**Petition for leave to file bill of review should be made to the Appellate Court.**

When new matter in the nature of newly developed or newly discovered evidence has arisen since the decree, and after appeal has been taken, the proper practise is to petition the Appellate Court for leave to file in the Court below a bill of review or supplemental bill in the nature of a bill of review:

> "The Appellate Court has power to allow its own decree to be reviewed in the Court below and in causes pending on appeal it has the power to send the record back so that the cause my be reviewed on newly discovered evidence in the Court of original jurisdiction. But it is absolutely necessary in every case that leave of the Appellate Court should first be obtained. The application for such leave may be made in the Appellate Court while the cause is there pending or even after it is finally adjudicated and the mandate of the Appellate Court has been returned to the lower Court and entered as its own decree."
>
> Street's Federal Equity Practice, Vol. 2, page 1284, Paragraph 2179.

In Southard *v.* Russell, 16 How., 546, 569-570, the Court said:

> "As already stated, the decree sought to be set aside by this bill of review in the Court below was entered in pursuance of the mandate of this Court, on an appeal in the original suit. It is therefore the decree of this Court, and not that primarily entered by the Court below, that is sought to be interfered with. The better opinion is, that a bill of review will not lie at all for errors of law alleged on the face of the decree after the judgment of the Appellate Court. These may be corrected by a direct application to that Court, which would amend, as matter of course, any error of that kind that might have occurred in entering the decree. Nor will a bill of review lie in the case of newly discovered evidence after the publication, or decreee below, where a decision has taken place on an appeal, unless the right is reserved in the decree of the Appellate Court, or permission be given on an application to that Court directly for the purpose. This appears to be the practice of the Court of Chancery in the House of Lords, in England, and we think it founded in principles essential to the proper administration of the law, and to a reasonable termination of litigation between the parties in Chancery suits."

*In re* Gamewell Fire Alarm Tel. Co. *et al.*, 73 Fed., 908, at page 911, the Court says:

> "In some of these cases before us it was so clear that the application had no equity that we refused it; but in none of them has the rule, or the proper practice under it, been fully stated. First, we will observe that the Supreme Court has made no distinction arising out of any question whether the application is made before or after judgment, or be-

fore or after mandate issued, or before or after the close of the term at which the judgment is rendered. In some of the cases to which we have referred, it is stated that the application may be made after judgment; and, unless it can be made after a mandate has gone down, and even after the term has adjourned at which the judgment was entered, there would evidently arise instances of the grossest injustice for which there could be no relief. We have no doubt that an application may be made, as in this case, after the judgment, after the issue of the mandate, and after the close of the term at which the judgment was entered, subject to certain limitations as to time arising out of the equitable doctrine of laches, and other possible exceptional limitations" (Ricker *v.* Powell, 100 U. S., at p. 109).

In Society of Shakers v. Watson, 77 Fed., 512, 513, in which case a petition for rehearing was denied, a petition for certiorari denied and the decree of the lower Court affirmed, and finally on the ground of new matter and newly discovered evidence, a petition for leave to file a bill of review in the Court below was filed in the Appellate Court, Justice Lurton delivering the opinion of the Court said:

"As the decree sought to be reviewed is in fact the decree of this Court, the application for leave to file a bill of review is properly made here. (Southard *v.* Russell, 16 How., 546; Kingsbury *v.* Buckner, 134 U. S., 650, 671; 10 Sup. Ct., 638; Bank *v.* Taylor, 4 C. C. A., 55, 53 Fed., 854.) On a mandate from this Court the Circuit Court can only record our decree and proceed with its own decree as affirmed, or upon the decree it was directed to enter, and has no power to alter, rescind or modify such decree unless leave to

> do so is reserved, or first had and obtained by application to this Court. The decrees and mandates of this Court have precisely the same finality as the decrees and mandates of the Supreme Court" (Bissell Carpet Sweeper Co. *v.* Goshen Sweeper Co., 19 C. C. A., 25, 72 Fed., 545).

In Sheller *v.* Alexander, 211 Fed., 544, 546, the Court said:

> "(3) While the cases are not fully in accord as to the proper procedure to be followed when an application is made for a rehearing on account of newly discovered evidence, it is apparent from the decisions that if a decree has been entered in the lower Courts, and an appeal has been taken therefrom to the Circuit Court of Appeals, so that the Appellate Court has jurisdiction, the proper proceeding is for the petitioner to file a petition duly verified and addressed to the Appellate Court, and praying for leave to file in the lower Court a supplemental bill in the nature of a bill of review" (*In re* Gamewell, 73 Fed., 908, 20 C. C. A., 111; Westinghouse Co. *v.* Stanley, 138 Fed., 823, 71 C. C. A., 189; Bliss *v.* Reed, 106 Fed., 318, 45 C. C. A., 304; Boston Railroad Company *v.* Bemis Co., 98 Fed., 121, 38 C. C. A., 661).

In Watson *v.* Stevens, 53 Fed., 31, 34, the case which had been heard and decided upon September 6th, 1892, upon appeal, and new matter and newly discovered evidence was discovered before the mandate went down, and upon the 28th of September, the appellees filed in the Circuit Court of Appeals a petition supported by affidavits and showing the new matter and newly discovered evidence, the Court ordered as follows, *per curiam*:

"Ordered, that whereas, it appears from the suggestion of the counsel for the appellees made in open Court, and accompanied with a verified petition and affidavits, that the appellees conceive that they will have just cause for application for leave to file a bill of review and to proceed with such bill, this Court reserved to the appellee's liberty to file such application, and proceed thereon and on such bill of review in the Circuit Court, as the Circuit Court may determine; and this order shall form a part of the mandate in this cause, which shall issue forthwith."

In Kimberly *v.* Arms, 40 Fed., 548, the Court at pages 550-551 says:

"The bill of review, which defendants now apply for leave to file, seeks to open, vacate, and set aside that decree. But before making said application the defendants, during the term of Court at which said decree was rendered, prayed an appeal to the Supreme Court which was allowed upon their giving bond, with sureties, to be approved by the Court. Such appeal-bond was duly executed and approved, and said appeal, so far as this Court is concerned, was thereby perfected before defendants presented this application for leave to file a bill of review. It is, however, stated in the bill of review which defendants asked leave of this Court to file that it is not the purpose of defendants, as at present advised, to perfect their said appeal by filing the record and docketing this cause in the Supreme Court, as required by the rules of practice of that Court. This averment does not, of course, amount to an abandonment of said appeal, nor to a definite purpose or intention to do so, but leaves the question of its further prosecution to the option of appellants. No new proceedings

having been had in this Court between the mandate of the Supreme Court and the decree based thereon, said appeal by defendants was no doubt improvidently taken and allowed. Still it has the effect of transferring the cause, and the decree sought to be reviewed, into the Supreme Court, where it will remain until heard and disposed of on the merits, or dismissed, under the provisions of the ninth rule of said Court, for appellants' failure to file the record and docket the cause. * * * With said appeal pending in the Supreme Court whether rightly or improvidently, this Court clearly has no authority or jurisdiction to entertain a bill of review to impeach said decree, over which it has, for the present, at least (no jurisdiction)."

## POINT II.

**The petitioner has asserted his right at the earliest possible moment and is free from negligence and laches.**

While the time within which a bill of review should be filed is not fixed by statute or rule, the Courts have stated that the bill may be filed so as to present the matters involved at the time of hearing on the merits.

In Clark *v.* Killian, 103 U. S., 766, the syllabus reads:

> "A bill of review is the proper mode of correcting errors apparent on the face of the record and it was in this case filed in time, less than two years having elapsed since the original decree was passed."

In this case, decrees were rendered, upon February 17th, 1875 and June 18th, 1875, adjudging certain conveyances null and void. Upon January 4th, 1877, a bill of review was filed for the purpose of setting aside the decrees for errors of law apparent on the face of the record.

Mr. Justice Harlan, page 783 said:

> "Taking all the circumstances to be as they are set out in the pleadings, it is perfectly clear that the Court in adjudging the conveyances of the lots above named null and void and ordering them to be sold in satisfaction of Clark's judgment erred in point of law. Consequently, a bill of review was the proper mode of remedying that error. The present bill was filed in time. Thomas *v.* Harvie, 10 Wheat, 146."

In Jorgenson *v.* Young, 136 Fed., 378, the Court says in its opinion, at page 381:

> "The rule is well settled in courts of equity of the United States that a bill of review must ordinarily be filed within the time limited by statute for taking an appeal from the decree sought to be reviewed where the review sought is not founded on matters discovered since the decree."

In Thomas *v.* Harvie's Heirs, 10 Wheat, 146.

Mr. Justice Washington delivered the opinion of the Court, and said, pages 150-151:

"It must be admitted that bills of review are not strictly within any act of limitations prescribed by Congress; but it is unquestionable that courts of equity acting upon the principal, that laches and neglect ought to be discountenanced and that in cases of stale demands its aid ought not to be afforded, have always interposed some limitations to suits brought in those Courts. It is stated by Lord Camden in the case of Smith *v.* Clay (Ambl., 643, 3 Bro. C. C., 639, note) 'that as the court of equity has no legislative authority it could not properly define the time of bar by a positive rule, but that as often as Parliament had limited the time of actions and remedies to a certain period in legal proceedings, the Court of Chancery adopted that rule and applied it to similar cases in equity.' * * * These principals seem to apply with peculiar strength to bills of review in the Court of the United States, from the circumstance that Congress has thought proper to limit the time within which appeals may be taken in equity causes, thus creating an analogy between the two remedies by appeal and a bill of review so apparent that the Court is constrained to consider the latter as necessarily comprehended within the equity of the provision respecting the former."

And further, at page 151, said:

"Whether a bill of review founded upon matter discovered since the decree is in like manner barred by the lapse of five years after such decree is a question which need not be decided in the present case, since we are all of the opinion that it is in the discretion of the Court to grant leave to file a bill of review for that cause, and that such leave ought not to be granted in a case where it appears that the plaintiff is not aggrieved

by the decree on account of the error so assigned."

In Westinghouse Electric and Manufacturing Company *v.* Stanley Instrument Co., 138 Fed., 823, the syllabus reads:

> "Where it is claimed that a patent in a suit, and against an infringement of which an injunction is sought, expired pending an appeal because of the expiration of a foreign patent for the invention, the facts in relation thereto should be presented to the Appellate Court on or before the hearing on the merits, and the defendant is charegable with laches if he fails to so present them, which will warrant the Court in denying him leave to file a supplemental bill in the nature of a bill of review to enable him to present the question, after the case has been finally determined on the merits, unless on terms named in the opinion."

At page 825, the Court in its opinion, says:

> "Under the circumstances, it was the duty of the petitioner to have brought these facts to our attention at or before the time the appeal was argued on its merits, and it failed in its duty in allowing us to proceed to hearing an issue with regard to an injunction which from the standpoint of the petitioner had ceased to involve anything except moot questions."

In Novelty Tufting Mach. Co. *v.* Buser *et al.*, 158 Fed., 83-84, the Court says:

> "if upon the case made, we have a strong impression that the decree which we have directed to be entered in the Circuit Court ought to be reopened and reviewed in that Court, we will release the lower court

from its obligation to observe our mandate to the extent of allowing it to entertain the application and decide upon its merits, but not otherwise. The decree entered upon the direction of the Appellate Court though in form it is the decree of the lower court, yet it is in substance its own decree, and it ought not for light reasons be allowed to be disturbed.

Nevertheless, if it is seen from circumstances coming subsequently to light that the decree is probably contrary to the justice and right of the case and there has been no negligence or other fault on the part of the aggrieved party the Appellate Court ought not to permit its mandate to stand in the way of the correction of the decree which it has caused the lower court to enter."

Mr. Justice Story, in Section 423 of his Equity Pleadings, says:

"It seems to me to be a general rule that a supplemental bill for newly discovered matter should be filed as soon after the new matter is discovered as it reasonably may be. If, therefore, the party proceeds to a decree after a discovery of the facts upon which the new claim is founded he will not be permitted afterwards to file a supplemental bill in the nature of a bill of review founded on those facts, for it was his own laches not to have brought them forward at an earlier stage of the cause."

In Hill *v.* Phelps, 101 Fed., 650, Sandburn, J., citing Justice Story, approvingly says:

"If, therefore, the party proceeded to a decree after the discovery of the facts upon which the new claim is founded, he will not be permitted afterwards to file a supplemental bill in the nature of a bill of review founded on those facts, for it was his own laches not

> to have brought them forward at an earlier stage of the cause."

As hereinbefore stated appellant was desirous of producing to this Court the actual operations under the reduced rate for as long a period as possible, in order that the said rate might be given a fair trial, and appellant, therefore, believes that it has not been guilty of laches or negligence in not before calling the attention of this Court to the said experiment under the one dollar rate.

And appellant in this case feels that as it has knowledge of the result of a trial and test of the one dollar rate for approximately a period of twenty months, it might be possibly open to a charge of laches and bad faith if at this time it did not call this Court's attention to the facts and if thereafter it should petition for leave to file a bill of review or endeavor to bring before the Court in some other subsequent proceeding such facts.

## POINT III.

**The granting of leave to file a bill of review or supplemental bill in the nature of a bill of review is within the sound discretion of the Court, but is granted in all equity cases where justice requires and no mischief is done to adverse parties.**

In the case of Hopkins *v.* Hebard *et al.*, 235 U. S., 287, Mr. Justice McReynolds said, page 291:

> "The function of a bill of review filed for newly discovered evidence is to relieve a meritorious complainant from a clear mis-

carriage of justice where the Court is able to see, upon a view of all the circumstances, that the remedy can be applied without mischief to the rights of innocent parties and without unduly jeopardizing the stability of judicial decrees. The remedy is not a matter of absolute right but of sound discretion. Thomas *v.* Brockenbough, 10 Wheat, 146; Ricker *v.* Powell, 100 U. S., 104, 107; Craig *v.* Smith, 100 U. S., 226, 233; 2 Dan. Ch. Pr., 1577; Story Equity Pleading, Paragraph 417, Street Federal Equity Practise, Paragraphs 2143, 2156, 2159; Gibson suit in Ch., Paragraphs 1058, 1062."

In Wiggins Ferry Company *v.* Ohio & Mississippi Railway Company, 142 U. S., 396, Mr. Justice Brown said, at page 413:

"When the facts of the case show the plaintiff to have an equitable title for relief, this Court, while it may be unable to afford such relief upon the case made by the bill, has in several instances asserted its power to remand the case to the Court below for an amendment of the pleadings, and such further proceedings as may be consonant with justice."

And further upon page 416 he said:

"Rules of pleading are made for the attainment of substantial justice and are to be construed so as to harmonize with it if possible. A mistaken view of one's rights or remedies should not be permitted wholly to defeat a claim founded upon principals of equity and justice and if the pleadings can be so amended as to admit proof of such claim and such amendment does not introduce a new cause of action, though it may set up a new measure of damages or work a real hardship to the party defendant, it is within the discretion even of the Appellate Court to permit such amendment to be made."

And again in the case of U. S. *v.* Coe, Chief Justice Fuller, citing Wiggins Ferry Company *v.* Ohio & Mississippi Railway Company, 155 U. S., 76, said at page 84:

> "* * * And in respect of allowance of amendments when the ends of justice require it, the course has been to remand the cause with directions."

In Hardin *v.* Boyd, 113 U. S., 756, Mr. Justice Harland, at page 761, said.

> "In reference to amendments of equity pleadings the Courts have found it impracticable to lay down a rule that would govern all cases. Their allowance must, at every stage of the cause, rest in the discretion of the Court; and that discretion must depend largely on the special circumstances of each case. It may be said, generally, that in passing upon applications to amend, the ends of justice should never be sacrificed to mere form, or by too rigid an adherence to technical rules of practise. Undoubtedly, great caution should be exercised where the application comes after the litigation has continued for some time or when the granting of it would cause serious inconvenience or expense to the opposite side. And an amendment should rarely, if ever, be permitted where it would materially change the very substance of the case made by the bill, and to which the parties have directed their proofs."

In the case of Ballard *v.* Searls, 130 U. S., 50, Mr. Justice Bradley, at page 52, said:

> "These facts, however, are of such a character that the appellant may be subjected to great injustice if the cause should go to hearing on the appeal in the present condition of the record; and as they have

occurred since the appeal was taken, there seems to be no mode of affording relief to the appellant except by sending the cause back to the Circuit Court for the purpose of allowing supplementary proceedings to be had in that Court."

And further, upon page 56, the Court proceeds:

"Our decision is that the cause be remanded to the Circuit Court with instructions to allow the appellant, defendant below, to file such supplemental bill as he may be advised in the nature of a bill of review, or for the purpose of suspending or avoiding the decree, upon the new matter arising from the reversal of the decree in the former case of Anson Searles *v.* Alva Worden and John S. Worden, and that such proceedings be had thereon as justice and equity may require. And it is so ordered."

In Seymour *v.* White County, 92 Fed., 115, in the Seventh Circuit, the Court declares the better practice to be for the Appellate Court to grant leave as a matter of course to file a bill of review in the Court below. The Court said, page 115:

"For the necessity of obtaining such leave reference is made to Bank *v.* Taylor, 9 U. S. App., 406, 4 C. C. A., 55, and 53 Fed., 854, in which Southard *v.* Russell, 16 How., 547, 570, and Kingsbury *v.* Buckner, 134 U. S., 650, 671, 10 Sup. Ct., 638, and other cases, are cited. A copy of the bill which it is proposed to file accompanies the petition, but, without consideration of its merits, it is deemed the better practice, unless for special reason to the contrary, to grant the petition as of course. To the extent, therefore, that the leave of this Court is necessary and may be granted, it is ordered that the petitioner have leave to file in the Court below the bill

> proffered, or such other or amended bill or petition as he may be advised, and that the costs of this proceeding be taxed against the petitioner."

In Novelty Tufting Machine Co. *v.* Buser, 158 Fed., 84, *supra*, on a petition for leave to file a bill of review in the Court below before Lurton, Severens and Richard, Circuit Judges, it was said:

> "Nevertheless, if it is seen from circumstances coming subsequently to light that the decree is probably contrary to the justice and right of the case and there has been no negligence or other fault on the part of the aggrieved party, the Appellate Court ought not to permit its mandate to stand in the way of the correction of the decree which it has caused the lower Court to enter."

We respectfully submit that justice requires that the appellant should be allowed the right to bring upon the records of this case the evidence of the effect that the reduction in rate has had upon the earnings and revenue of the appellant, and that by the bringing of the said facts upon the records of this Court no injustice or mischief or inconvenience will be done to the City of Lincoln, appellee, or to any consumer of gas or inhabitant within the City of Lincoln. In the event that the ordinance as passed by the Council of The City of Lincoln should be declared to be operative and binding, the City of Lincoln and the consumers of gas within that City entitled to refund in that event, are fully protected and have been protected at all times by a bond filed in this cause with approved sureties, so that whatever the effect of a refund to the consumers might

have upon the appellant, Lincoln Gas & Electric Light Company, the consumers will not suffer. However, in the event the ordinance at this time should be sustained, and the appellant required to refund such excess charges to the consumers, that refund will be made in small amounts to many hundreds of different persons, and it would be practically impossible for this appellant or for the sureties upon the said bond to later recover the amount so paid to the individual consumers, in the event that at a later date the ordinance was held to be confiscatory. We, therefore, say that no injustice or injury can be suffered by the appellee, the City of Lincoln, or any consumer of gas within the said City, in any manner or form, if the leave prayed for be granted, and that the only injury which may be sustained by anyone would be to your appellant, if the leave be denied, and that equity and justice are with the appellant in this matter, and the Court should in its sound discretion grant the leave as petitioned.

## POINT IV.

**The Court below, if it dismissed the bill, should have dismissed it without prejudice to reinstate the case for subsequent hearing after the one dollar rate had been put to actual trial and test.**

All the evidence submitted as to the effect of a reduction in rate upon the earnings of the appellant and the effect of the said reduction in the consumption and additional sales of gas within the City of Lincoln were based solely upon conjecture. The ordinance had not been put into operation and the conclusion of the master and

the Court below was based solely upon evidence and theories projected into the future. We submit that the best and most satisfactory evidence as to the effect of a reduction in rate is an actual trial and experiment under the reduced rate.

The master in his findings reported to the Court that the appellant would receive, with gas selling at one dollar per thousand cubic feet, a return of 5.12% upon its investment in 1907. He found "a considerable number of witnesses testified with respect to the return upon capital invested in banking, merchandising and other businesses in the City of Lincoln, and from their testimony I find that eight per cent. is the lowest rate sought and generally obtained in such businesses." But that "I cannot believe that a rate not lower than six per cent. upon their invested capital could be regarded as confiscatory."

The actual return to this appellant as found by the master was at that time confiscatory, but he found that: "All human experience has shown that increased consumption follows quickly a reduction in the price of commodities, and the evidence in this case satisfactorily shows that gas is no exception to the rule. I find that with gas selling at one dollar per thousand cubic feet, plaintiff would have received since December 1st, 1906, when the rate ordinance was to be effective, not less than six per centum per annum upon the value of the property employed by it in serving the people of Lincoln."

Therefore, finding as he did that the return which appellant would receive upon its investment in 1907, was confiscatory, or at least there was grave doubt as to whether or not it was compensatory, and as the value of the property was

an estimate and is greatly disputed, and much less as found by the master than the value as shown by the appellant by competent testimony, the Court, if it dismissed appellant's bill and dissolved the temporary injunction, should have dismissed it without prejudice to a rehearing, and given the appellant an opportunity to place before the Court below the actual facts resulting from an experiment under the reduced rate. We respectfully submit that this is the accepted doctrine and rule as laid down by this Court in confiscatory rate cases.

Mr. Justice Moody, in delivering the opinion of the Court in the City of Knoxville *v.* Knoxville Water Company, 212 U. S., 1, at page 15, said:

> "The precise subject of inquiry was what would be the effect of the ordinance in the future. The operations of the preceding year, or of any other past fiscal year, were valueless if the year was abnormal, and were only of significance so far as they foretold the future. If as in this case sufficient time has passed so that certainty instead of prophecy can be obtained, the certainty would be preferable to the prophecy. In this case there could be no absolute certainty, because the ordinance had never been put in operation. But evidence of the operation of the years succeeding to the ordinance is relevant and of great importance, and by a consideration of such evidence a much greater degree of certainty could be obtained. Suppose, by way of illustration, that before bringing suit the company had put the ordinance into effect and had observed it for a number of years and the result showed that sufficient net income had been realized, is it possible that a suit could be brought and the evidence

confined to a period prior to the ordinance and by a process of speculation the conclusion reached that the ordinance would be confiscatory? Some evidence regarding the income of the company after the passage of the ordinance is in the record, but it subsequently was excluded from consideration. It showed an increase of gross and net earnings, but also an increase in the property devoted to the public use. We are unable to say what the effect of the evidence excluded would be; all we can say is that the inquiry was unduly limited by the exclusion of the evidence of the operation of subsequent years."

The Court further says upon page 17:

"Where the case rests, as it does here, not upon observation of the actual operation under the ordinance, but upon speculation as to its effect based upon the operations of a prior fiscal year, we will not guess whether the substantial return certain to be earned would lack something of the return which would save the effect of the ordinance from confiscation. It is enough that the whole case leaves us in grave doubt. The valuation of the property was an estimate and is greatly disputed. The expense account was not agreed upon. The ordinance had not actually been put into operation. The inferences were based upon the operations of the preceding year; and the conclusion of the Court below rested upon the most unsatisfactory evidence, the testimony of expert witnesses employed by the parties."

Upon page 18, the Court proceeds:

"The slight gain to the consumer which he would obtain from a reduction in the rates charged by public service corporations is as nothing compared with his share in the ruin

which would be brought about by denying to private property its just reward, thus unsettling values and destroying confidence. On the other hand, the companies to be regulated will find it to their lasting interest to furnish freely the information upon which a just regulation can be based.

If hereafter it shall appear under the actual operation of the ordinance, that the returns allowed by it operate as a confiscation of property, nothing in this judgment will prevent another application to the Courts of the United States or to the Courts of the State of Tennessee. But as the case now stands, there is no such certainty that the rates prescribed will necessarily have the effect of denying to the company such a return as would avoid confiscation. For these reasons:

*The decree is reversed and the case remanded to the Court below with directions to dismiss the bill without prejudice."*

In the case of Willcox *et al. v.* Consolidated Gas Company, 212 U. S., 19, Mr. Justice Peckham delivered the opinion of the Court, filed upon January 12th, 1909. On January 4th, 1909, Mr. Justice Peckham made an announcement and in that announcement, as shown in a foot note upon page 23, he said:

"Where as in this case in an action brought before the rate takes effect, complainaint fails to sustain the burden of clearly showing that a rate act is confiscatory, the bill should be dismissed without prejudice to the right of the complainant to bring another action after the rate goes into effect, if it then proves to be confiscatory."

Upon page 42, of the opinion, the Court said:

"The value of real estate and plant is to a

considerable extent matter of opinion and the same may be said of personal estate when not based upon the actual cost of material and construction. Depreciation of the value of the plant, mains and pipes is also to some extent based upon opinion. All these matters make questions of value somewhat uncertain, while added to this, is an alleged prospective loss of income from a reduced rate, a matter also of much uncertainty, depending upon the extent of the reduction and the probable increased consumption, and we have a problem as to the character of a rate which is difficult to answer without a practical test through actual operation of the rate. * * * But where the rate complained of shows in any event a very narrow line of division between possible confiscation and proper regulation as based upon the value of the property found by the Court below, and the division depends upon opinions as to value, which differ considerably among the witnesses, and also upon the results in the future of operating under the rate objected to, so that the material fact of value is left much in doubt, a court of equity ought not to interfere by injunction before a fair trial has been made of continuing the business under that rate, and thus eliminating as far as is possible the doubt arising from opinions as opposed to facts."

And the Court proceeds upon page 48, saying:

"There is no particular rate of compensation which must in all cases and in all parts of the country be regarded as sufficient for capital invested in business enterprises. Such compensation must depend greatly upon circumstances and locality; among other things, the amount of risk in the business is a most important factor, as well as the locality where the business is conducted, and the rate

expected and usually realized there, upon investments of a somewhat similar nature with regard to the risk attending them."

And on page 51, the Court said:

"* * * but it is equally true that a reduction in rates will not always reduce the net earnings, but, on the contrary, may increase them. The question of how much an increased consumption under a less rate will increase the earnings of complainant, if at all, at a cost not proportioned to the former cost, can be answered only by a practical test."

Upon page 54 of the same opinion the Court proceeded, saying:

"It may possibly be, however, that a practical experience of the effect of the acts by actual operation under them might prevent the complainant from obtaining a fair return, as already described, and in that event complainant ought to have the opportunity of again presenting its case to the Court. To that end we reverse the decree with directions to dismiss the bill without prejudice and it is so ordered."

In Northern Pacific Railway Company *v.* North Dakota 216 U. S., 579, Mr. Justice Holmes said, page 581:

"It seems to us that the nearest approach to justice that can be made at this time is to follow the precedent of Willcox *et al v.* Consolidated Gas Co. 212 U. S., 19, as nearly as may be, and affirm the decree but without prejudice to the right of the Railroad Company to reopen the case by appropriate proceedings, if after adequate trial it thinks it can prove more clearly than at present the confiscatory character of the rates for coal."

*In re City of Louisville*, 231 U. S., 639, a petition for a writ of mandamus to compel the Judge of the District Court of the United States for the Western District of Kentucky to vacate a supplemental order retaining the case for an actual experiment after the Federal Supreme Court had reversed without prejudice a decree of the District Court enjoining as confiscatory the enforcement of a Municipal ordinance fixing telephone rates, Mr. Justice McKenna in delivering the opinion of the Court said, pages 645-6:

> "* * * The Court considered the opinion and decree of this Court permitted a discretion to retain the case for an actual experiment of the rates. * * * We think the discretion was properly exercised. * * * An actual experiment of the rates had been voluntarily undertaken and had been in effect for more than eight months before the order under review was entered, and the Court conceived that observation of the experiment might secure greater accuracy and confidence in the result and besides inform the Court of matters as they progressed. We repeat, we think the Court did not exceed the discretion permitted."

In the case of the City of Louisville *v.* Cumberland Telephone & Telegraph Co., 231 U. S., 652, a case decided upon the same day as *in re* City of Louisville, the decision was governed by the principles announced *in re* City of Louisville, *supra*.

In Des Moines Gas Co. *v.* City of Des Moines, 238 U. S., 153, Mr. Justice Day said, page 173.

> "While we agree with the Court below that it was right to confirm the Master's report and dismiss the bill, we think in view of the

> fact that the attack upon the rates was made before the ordinance went into effect and before actual application of the rates could demonstrate whether they were remunerative or not, that the Court should have followed the recommendation of the Master and dismissed the bill without prejudice. We think this is particularly so in view of the fact that ordinarily time alone can satisfactorily demonstrate in a case like this whether or not the rates established will prove so unremunerative as to be confiscatory, in the sense in which that term has been defined in rate making cases. The Master's suggestion has the support of the judgment of this Court in Knoxville *v.* Knoxville Water Co., 212 U. S., 1, and Willcox *v.* Consolidated Gas Co., 212 U. S., 19.
>
> "With the modification that the bill be dismissed without prejudice instead of as the Court below directed, with prejudice, the decree is affirmed with costs."

In the light of the law as it has been established by the Supreme Court of the United States in confiscatory rate cases, and in view of all the circumstances of this case, and especially of the fact that the rate herein questioned has been in effect for approximately a period of two years, and that at this time and before the final submission of this case to this Court upon appeal the results of the actual trial and experiment are in existence and can be placed in the record for further enlightenment of the Court, and are the best, most satisfactory and convincing evidence of the remunerativeness of the rate, we respectfully submit that equity and justice permit this appellant to file the bill as it has herein requested to file, or such pleading or bill as it may be advised by its counsel or this Court.

## POINT V.

**In view of the master's finding as to the company's rate of earnings in 1907, it is of particular importance that evidence of the actual operation of the one dollar ($1) rate should be before this Court upon the final hearing of the merits of this appeal.**

The master came to the following conclusion in regard to the rate of return upon the Company's invested capital in the City of Lincoln: "I cannot believe that a rate not lower than 6% upon their invested capital could be regarded as confiscatory."

The master also determined, according to his own figures of valuation, that the company actually earned in the year 1907 (the first year when the rate ordinance was to have been effective), only 5.12% upon its investment as he found it. But the master justifies sustaining the validity of the rate ordinance on the ground that if the $1 rate had been put into effect, an increased consumption of gas together with an increase in earnings, would follow the reduction in price, and he concludes that if gas had been offered for sale at $1 per thousand cubic feet during the year 1907, the company would have received not less than 6% upon the value of its investment. He said:

> "All human experience has shown that increased consumption follows quickly a reduction in the price of commodities and the evidence in this case satisfactorily shows that gas is no exception to the rule. I find that with gas selling at $1 per thousand cubic feet, plaintiff would have received since De-

> cember 1st, 1906, when the rate ordinance was to be effective, not less than 6% per annum upon the value of the property employed by it in serving the people of Lincoln."

It would seem, therefore, that the entire value of the master's decision depends upon the correctness of his hypothesis that a reduction in the rate would have resulted in an increase of consumption thereby increasing the earnings.

But now that the $1 rate has been in effect for a period of twenty months there is no further necessity for estimating the effect of the reduction on the company's earnings as it is now possible to secure direct evidence on this point and place the exact facts before this Court at the time the merits of this bill come on for final hearing.

For these reasons the appellant deems it particularly important in this case that a bill of review be granted because it contends that the evidence with regard to the actual operating effect of the $1 rate should be before this Court in order to enable it to properly pass upon the questions involved in this bill.

## POINT VI.

**The master failed to report and find as instructed by the Supreme Court of the United States.**

In Lincoln Gas & Electric Light Company *v.* The City of Lincoln, 223 U. S., 349, Mr. Justice Lurton, in delivering the opinion of the Court, said, at page 364:

"There should be a full report upon past depreciation, past expense for reconstruction or replacement and past operating expenses, including current repairs. We should be advised as to the gross receipts for recent years and just how these receipts have been expended. Then the amount to be set aside for future depreciation will depend upon the character and probable life of the property, and the method adopted in the past to preserve the property. It can readily be seen that the amount to be annually set aside may be such as to forbid rate reductions because of the requirement of such a fund. The matter is one first for a skilled master, who should make a full report upon the value of the property, the receipts and the expenses of operation and the sums paid out on reconstruction and replacements and in dividends in recent years.

For the reasons indicated we direct that the decree be

*Reversed*, and the cause remanded to the District Court to refer the case to a competent and skilled master to report fully his findings upon all questions raised by either party separately, and with leave to both parties to take any additional evidence they may wish within a time to be fixed by the Court, and that that Court upon such report proceed as equity shall require."

The master in his report failed to make a full report upon past depreciation, past expense for reconstruction or replacement and past operating expenses, including current repairs. He says:

"In computing depreciation I have, so far as reliance has been placed upon arbitrary hypothesis, used what is known as the straight line method as being the most ap-

> propriate to the actual situation and condition with which we have to deal and the one best calculated to bring about a right result."

And cites in support of this position Hayes on Public Utilities and Foster Engineering Valuation of Public Utilities and Factories, quoting from each authority.

It will be noted, however, that in the quotation as used by the master, Mr. Hayes, in Section 162, says:

> "If there is plant alone as representative of the property of the undertaking, the straight line method *when age and life have been determined with accuracy* will show the absolute loss in value and consequently this loss in value gives the true depreciation of the property."

And Mr. Foster in his work as quoted by the master, says:

> "By far the most commonly used method of depreciating machinery and plant is that known as the straight line. By this method *a length of life of the particular apparatus under consideration is estimated and determined by the best experience and judgment available, then this length of life divided into one hundred will give the rate at which the depreciation is to be computed."*

While the master says in his report:

> "The life, age, present condition, fitness and scrap value of the various portions of the plant as shown by the evidence should be taken into account and given due consideration, and as far as practicable that is what has been done in this case,"

yet his report is entirely silent as to the character

and probable life of the property. There are no definite findings on these matters even though both the company and the City placed numerous witnesses on the stand and through them introduced evidence as to the character, age, and probable life of each item of the company's equipment so that the master had abundant material upon which to base and set forth a finding as to these matters, in accordance with the direction of this Court.

Likewise, his report is entirely silent as to the method adopted in the past to preserve the property, in that he has failed throughout his entire report to show the past expense of reconstruction and replacement and current repairs. Although he has dealt at some length with the past operating expenses of the company, he has in all respects failed to in any way separate or show so that the appellant may be informed, or the Court in this case can ascertain, the length of life as assumed by the master in arriving at his depreciation.

Covering the item of money expended for reconstruction and replacement, including current repairs, the master frankly admits that he is unable to make the calculation, although the company's records in recent years were in evidence. In arriving at his amount of depreciation to be allowed for future years he merely sets forth an arbitrary amount of money, without, as is above stated, showing in any way the probable life of the property or the method he has used in arriving at said arbitrary amount. This certainly cannot be said to be in accordance with the instructions of this Court, and is no more enlightening to this Court than the previous decree in this case which was reversed by this Honorable Court. The previ-

ous decision allowed $8,000 per annum and the master's present findings allowed $10,000 per annum, but there are no more facts given this Court for its review than previously.

These questions were raised separately by the parties and a full report was asked of the master in respect to those details. The report as affirmed by the Court below can certainly not be said to be in accordance with the instructions of this Court which stated that there should be a *full report upon past depreciation*, past expense for reconstruction or replacement and past operating expenses, including current repairs, and that the amount to be set aside for future depreciation will depend upon the character and probable life of the property and the method adopted in the past to preserve the property.

The master has failed to make a full report upon the value of the property and a complete summary of the evidence and his deductions therefrom and his reasons therefor, and frankly states:

> "A summarization of this evidence is quite impossible and would, as far as I can see, aid neither Court nor counsel in testing the correctness of the conclusions which I have reached."

## POINT VII.

**The granting of the leave prayed for will not hinder or delay the hearing of this cause in its due and orderly course.**

At the time this case was placed on the docket the appellant intended to petition this Court for leave to file a bill of review or supplemental bill in the nature of a bill of review, for the purpose

of showing this Court the actual operation of the one dollar rate over as long a period as possible. There was ample time to file such petition and to have the evidence taken pursuant thereto, before the hearing of the appeal of this case would be reached in the ordinary course of the docket. Appellant is making the motion at this time because of the motion made on behalf of the appellee to advance the hearing of this cause.

If the petition of the appellant is granted and appellant is given leave to file a bill of review or supplemental bill in the nature of a bill of review, the taking of the evidence pursuant thereto will be completed and the record thereof will be returned to this Court before the hearing of this cause is reached in the ordinary and usual course of the docket. Appellant, therefore, submits that the granting of its petition by this Court will not hinder or delay the hearing of this cause in its due and orderly course.

## POINT VIII.

### Conclusion.

From the foregoing authorities it is clear that this Court has jurisdiction at this time to grant appellant the right to file a bill of review in the Court below. That the appellant has made timely application to this Court for such leave. That regardless of the disposition this Court shall make of this case on its merits, leave should be granted. That in the event this Court affirm the decree of the Court below without taking into consideration the facts as result from a trial and test of such reduced rate, great injustice will

be done to the appellant. That while the filing of a bill of review is within the discretion of the Court to which it is addressed under chancery practice, such right is never denied where no mischief, inconvenience or injustice is suffered by the adverse party and where substantial justice will be accomplished.

Wherefore, we respectfully submit that this Honorable Court should remand the case to the Court below with such instructions as to further proceedings as may be proper to enable said Court to take the proofs and bring upon the record of this cause, the result of the actual trial and test of said one dollar rate.

Respectfully submitted,
CHARLES A. FRUEAUFF,
E. C. STRODE,
Solicitors for Appellant.

## SUPPLEMENTAL BRIEF OF APPELLANT.

### POINT I.

### Effect of Stipulation.

It has just been brought to our attention by telegraphic communication from local counsel in Lincoln that the appellees have set up in their brief in opposition to the petition for a bill of review (which at the time of the preparation of this brief, we have not had an opportunity to examine), the fact that a stipulation was entered into by the parties at the time the one dollar rate for gas was put into effect. This stipulation was entered into on approximately May 1st, 1915, at the time the one dollar rate was put into effect by Lincoln Gas and Electric Light Company.

We submit that this stipulation, construed in the light of the circumstances under which it was entered into, and the intention of the parties at

the time, has no bearing whatsoever upon the present petition of the company for leave to file a bill of review.

When the stipulation was entered into, the Master had filed his report containing his findings, but the report had not come before the District Court for hearing on the objections of the Company to the report, although it was expected that a hearing on the Master's report would be shortly held. As a matter of fact, this hearing on the Master's report was held in the following month, to wit, June, 1915.

The stipulation was entered into with the intention that the fact that the one dollar rate had been put into effect would not be taken to be an admission as an acceptance of or compliance with the ordinance of 1906; and furthermore, that neither party would bring to the attention of the Court upon the hearing on the Master's report the fact that the one dollar rate was then effective.

We submit that this intent clearly appears from the stipulation itself. It is entitled in the Court below, and reads, "The action of the Gas Company in establishing such new rate shall not be shown in evidence or presented to *the Court* in the above entitled cause, or used in any way by either party to influence the action of the Court in the disposition of the case involving the validity of said 1906 gas ordinance." "The Court" referred to in the stipulation was the District Court, and the particular proceeding which the parties had in mind in drawing up the stipulation was the hearing before the District Court on objections to the Master's report.

We submit that it is idle to now argue that this stipulation was intended to bind the com-

pany from ever showing the effect of this one dollar rate at any time in the future; because it is apparent that even if the decision of the Court below should be affirmed by the Supreme Court of the United States upon the hearing of the appeal, this Honorable Court would not dismiss the bill without prejudice, but in conformity with its established policy, would permit the company, at any time in the future, to bring further proceedings to test the compensatory character of the rate fixed by the ordinance after an actual trial and test of the rate showed what its effect was upon the company's earnings. These further proceedings would be supplementary to the present case, and its object would be to obtain an amendment at the foot of the decree modifying the decree to such extent as would be justified by the showing made after the actual trial and test of the rate. According to the construction now attempted to be put upon this stipulation by counsel for the City, it would seem that they are trying to prevent the company from ever raising the question of the actual operation of the rate ordinance. This is, we submit, clearly erroneous and quite foreign to the intention of the parties when the stipulation was entered into.

Confirming our view that the intention of this stipulation was merely to cover the hearing before the District Court on objections to the Master's report, we beg to point out that counsel for the City in the proceedings to determine the amount of the bond on appeal after the District Court had confirmed the Master's report, called the attention of the District Court to the fact that this one dollar rate had been put into effect and used this fact as one of the factors to be con-

sidered in determining the amount of the bond. At that time under date of November 17th, 1915, they wrote a letter to the Hon. Page Morris, who was considering the amount of the appeal bond, they said:

> "In addition to the matters submitted in the oral statement to Judge Elliott, one important element should be submitted, namely, while the company has voluntarily reduced its rate to approximately the rates prescribed by the ordinance, it is to be remembered that as a matter of law the ordinance is not recognized by the company, and in the event that the company should so desire they could advance the rates again any time they choose to the old figure of $1.20 in which event even a $600,000.00 bond would be wholly inadequate."

Counsel for the company at that time raised no objection to the mention of this matter by counsel for the City to the District Court, because it was so thoroughly in accordance with the view of the company's counsel that the stipulation was merely intended to affect the hearing on the objections to the Master's report; and we submit that the action of counsel for the City in bringing to the attention of the District Court at the time of fixing the amount of the appeal bond the fact that the one dollar rate had been placed into effect by the Company, shows conclusively that it was their construction of the stipulation that it was merely so intended to affect the hearing before the District Court on the objections to the Master's report.

This stipulation was entered into by local counsel at Lincoln on behalf of the company, and if this Honorable Court deems the matter of the

stipulation to be of such serious moment that it would affect the company's petition for leave to file a bill of review, we request that decision be left open until the company has an opportunity to file another brief prepared by local counsel who is thoroughly familiar with the circumstances surrounding the stipulation, in order that he may present fully his views in respect of this matter.

## POINT II.

**Bill of review or supplemental bill in the nature of a bill of review is the proper method of procedure in this case.**

The Master found that while the ordinance rate would have been confiscatory at the time, he presumed there would be an increase in use of gas because of the reduction in rate. This point was, therefore, one of those in direct issue in the original proceedings, but the character of evidence which could then be produced was entirely speculative. However, now through the actual trial of the reduced rate, exact evidence can be produced which will rebutt the Master's presumption, therefore, this evidence is newly discovered and properly presentable through the medium of a bill of review or supplemental bill in the nature of a bill of review, and does not require the filing of a new bill or supplemental bill.

Respectfully submitted,
CHARLES A. FRUEAUFF,
Solicitor for Appellant.

---

LINCOLN GAS & ELECTRIC LIGHT COMPANY,
APPELLANT,

V.

THE CITY OF LINCOLN, ET AL., APPELLEES.

---

## SUPPLEMENTAL BRIEF OF APPELLANT.

---

Counsel for the City of Lincoln filed two supplements to their brief on the oral argument, and by the consent of the counsel on behalf of the City, this additional or supplemental brief is filed by the Company.

### I.

### THE MASTER'S VALUATION AS OF JANUARY 1, 1907.

The valuation of the Company's properties as of January 1, 1907, and the net earnings of the Company for the year 1907 are of first importance in testing the validity of the ordinance in question.

The Master found a total present value of $436,565.00 as of January 1, 1907, and found that the Company, at the $1.00 rate would earn 5.12 on that valuation for the year of 1907.

The valuation of $436,565.00 found by the Master includes (1), working capital, (2), going value, and (3), presumably twelve and one half per cent (12½%) over-head on the net construction cost as of January 1, 1907. It is impossible from the Master's findings to determine (1), the present value of the physical properties of the Company as of January 1, 1907, or (2), the reproduction cost of such properties, or (3), the amount of the accrued depreciation considered, and the depreciation by the Master from the replacement costs new to reach the present value, the basis employed by the Master in his valuation as of January 1, 1913. It is also impossible to determine from the Master's valuation of 1907 the amount included, (1), for working capital and (2), for going value, and (3), the amount of overhead expense added to the construction costs of the physical properties.

Judge W. H. Munger, upon the former hearing, found the replacement costs of the Company's properties excluded going value and interest during construction and certain other items of properties and values claimed by the Company, but included working capital of $50,000.00 in the amount of $616,073.59, and found the accrued depreciation to be $49,688.17, leaving the present value as of January 1, 1907, at $566,073.59 (Trans., p. 25). To this valuation so found by Judge Munger, should be added going value and interest during construction. With these two elements properly included in Judge Munger's valuation it will be seen that the Master's valuation for 1907 is approximately $200,000.00 below the figure fixed by Judge Munger.

The Company submitted a detailed valuation of the physical properties including working capital, upon the hearing before Judge Munger in the former trial, showing a valuation of $904,000.00 for the physical properties, including working capital, but excluding going value (Trans., p. 263). That testimony, as well as all testimony submitted to Judge Munger upon former trial was submitted to the Master.

The Company offered, upon the hearing before the Master, the testimony of Mr. Lea, whose testimony was largely the basis for the Master's findings, in the Des Moines Gas Case reviewed by this Court, showing a reproduction cost as of January 1, 1907 in the amount of $904,141.00 and a present value of $784,682.00.

The Master's lump sum figure for 1907 is clearly $200,000.00 below the then present value of the Company's properties as shown by the conclusive and overwhelming weight of the evidence and the net earnings of 5.12 per cent. upon such low valuation as fixed by the Master is clearly confiscatory.

TheMaster's valuation for 1907 utterly fails to comply with the order and direction of this court in the reversal of the case upon former hearings, to the effect that the Master should (1), report fully his findings upon all questions raised by either parties separately and that (2), he should make a full report upon the value of the properties, (3), the receipts and expenses of operation, (4), the sums paid out upon reconstruction and replacement, and the depreciation in past years and (5), a full report upon past depreciations, past expense for reconstruction and reproduction and past operating expenses, including current repairs. A lump sum valuation for 1907 of $436,565.00, including both tangible and intangible properties without any separation or segregation, and without any indication as to the amount of depreciation or the replacement costs new in the properties or any portion of the properties and without any findings as to how much the Company had expended for reconstruction or repairs prior to 1907, or how much the properties had depreciated at that time is a total and utter failure on the part of the Master to comply with the directions of this court.

The Company in its exceptions to the Master's report, pointed out specifically the above failure on the part of the Master (Exc. 1, Trans. p. 70). The Company also filed an application to recommit the case to the Master in order that specific findings should be made in the above matters (Request No. 17, Trans. p. 73).

*Construction Account:* The construction account of this Company shows a net amount of $784,307.49 at the close of the year of 1912, and $589,887.84 at the close of the year of 1906 (Trans. p. 1896).

The question was asked by Justice Brandeis on the oral argument as to whether the construction account showed the total investment of the Company undepreciated in 1912. The evidence referred to in the City's brief and also in our brief, page 100, shows that in case of replacements the new equipment taking the place of the old equipment was charged in the construction account with the difference between the cost of the new and the cost of the old, so by that process all completed depreciation was charged off, the new equipment by this method absorbed the depreciation in the old in the deduction in which it was charged in the construction account. The construction account to the extent of such completed depreciation does not reflect the total investment, but reflects the total investment less the total completed depreciation. The effect of deducting from the new equipment the original cost of the old is to charge the new equipment with all of the depreciation in the old. Further the evidence shows (Trans. pp. 2037-2061) deductions in addition to the deductions covering depreciation in the construction account as above indicated, further credits or deductions, in the amount of $59,754.15. These credits in the construction account have been deducted, leaving a balance in 1912 of $784,307.49, and at the close of 1906 the amount of $589,887.84. The construction account does not include working capital which the Master fixed at $60,000.00 in 1912 nor the twelve and one-half per cent overhead allowed by the Master, nor anything for going value.

## II.

## MASTER'S VALUATION FOR 1912.

With respect to the Master's 1912 values of $676,565.00 including working capital and going value, the difference between

the Master's present value on the physical properties including working capital and the present value of such properties as determined by Mr. Lea, exclusive of paving over mains and services is $68,859.00, as follows:

| | Master. | Lea. | Difference. |
|---|---|---|---|
| Real Estate | $16,250.00 | $18,350.00 | $2,000.00 |
| Buildings | 29,381.00 | 30,967.00 | 1,586.00 |
| Work Equipment | 179,310.00 | 196,759.00 | 17,449.00 |
| Distribution System | 351,624.00 | 387,445.00 | 35,821.00 |
| Working Capital | 60,000.00 | 72,038.00 | 12,038.00 |
| Total Difference | | | $68,859.00 |

The Master excluded from the value of the distribution system $30,484.00, representing payments made by consumers on house services, which is included, however, in Mr. Lea's figure and which if deducted from Mr. Lea's valuations would leave a net difference of $38,411.00 in the valuation of the physical properties, including working capital.

The error in the City's tabulation submitted at the close of the argument showing a net difference of $11,000.00 in the values of the physical properties results from deducting from the present value undepreciated, going value and overhead items in Lea's valuation, and by including and deducting as a separate item $33,000.00 organization expense which is a portion of Lea's overhead. By its deducting as a separate item, after deducting overhead, a double deduction for this item occurs.

## III

## THE MASTER'S 1912 OPERATING EXPENSES.

The Company complains of the Master's 1912 finding more particularly because of the deductions made by the Master in the operating expenses for 1912, amounting to $23,000.00, which represented money actually expended by the Company in the operation of its properties.

The exclusion of more than $7,000.00 from the operating expense in the new business department we believe was not justified and particularly in view of the fact that a large portion of the total expenditures of the new business department would be incurred by the Company necessarily if there was no new business department.

Expenditures of the Company in holding and getting business under serious competition on the part of the City should be considered with some degree of liberality in a contest with the City and the Company should have considerable latitude in the exercise of its judgment as to necessary expenditures to preserve, protect and extend its business, and should not be held to limitations or restrictions proposed by the City. The Master's restrictions on such expenditures would have been unnecessary in the absence of such competition since it is fair to assume that such expenditures would not have been incurred in the absence of competition. The Master we believe attached too much importance to the results in getting new business, and not enough importance to the efforts of the Company to hold old business. The Company would be doing well to hold its volume of business by such expenditures in view of the growth of the City of 4,000 in ten years, and in view of the aggressive competition on the part of the City and Traction Company in the electric field. The field for expansion by reason of the small increase in growth in City was very limited and the Company was doing well to hold its own even with the expenditures in the new business departments.

Further expenditures of the character in question would necessarily belong either to the operating expenses or capital account of the Company. They were either an operating expense or a capital investment. The Master excluded the amount so expended to the extent indicated in his report from both accounts. In this the Master clearly was in error.

An analysis of the new business department account is found in the record (Trans. pp. 1537-1559), showing that the expenditures charged to this department include portions of

the (1), rent, heat, lighting, telephone charges, (2), barn expenses, (3), labor expenses in connection with setting and resetting meters and connections and (4), rebates and allowances. The appliance account standing alone (Trans. pp. 1543-1551) shows a gain of more than $1,000.00 in 1912, and more than $5,000.00 in 1913 (Trans. p. 2062, Sub. G 15). The City's contention that the handling of appliances in 1912 was at a loss of $7,301.93 is reached by charging alone the appliance account with the expenditures of the new business department, which expenditures were incurred not in the sale of appliances alone, but in getting and holding business, including certain salaries for the new business department, wages, labor, advertising, etc. It is apparent that if the total expenses of the new business department is charged against the receipts from the sale of appliance which is only a subdivision of the new business department the profits on the appliance account would have to be sufficient to carry the total expenses of the new business department or a loss would be shown. A fair comparison would be to consider the appliance account standing alone showing the amount of money paid by the Company for the appliances purchased, and showing the amount of money realized upon appliances sold and the expenses involved in making the sale, and if the appliances were sold for more than the Company paid for them, plus such expenses, to the extent of such difference a profit would result from the handling of appliances which in turn could be used by the Company in defraying other expenses of the new business department.

In 1912 the expenditures of the Company to the extent of $19,692.64 were charged to the new business department. In 1913 this amount was reduced to $10,399.90. This reduction, however, was due in part to the fact that the sale of the appliances standing alone resulted in a profit of more than $5,000.00 (Trans. p. 2062, Sub. G 15). The sales of gas in Lincoln, however, dropped from 227,297 M. cu. ft. in 1912 to 220,000 M. cu. ft. in 1913.

The manager of the Company, found by the Master to be competent and skilled approved the expenditures of the Company charged to the new business department. The Master eliminated $7,692.64 of the $19,692.64 expended in the year of 1912 in that department. There is, we believe, no fair basis or justification for the elimination of $7,692.64 of the expense of the Company so incurred in 1912. The Master may as well have eliminated all of it as any part of it so far as having any basis in the record for his action is concerned.

The Master also eliminated an expenditure in 1912 of $3,000.00 paid the chairman of the board of directors, and $600.00 paid New York counsel, a total of $3,600.00. The total executive salaries of the Company, including president, vice-president, chairman of the board of directors, manager, secretary, assistant secretary and treasurer for the year 1912, chargeable to the gas department was $8,917.30. This expense was approved by the manager. There is no testimony in the record showing the amount to be excessive or unreasonable or unnecessary. The exhibits compiled from the Massachusetts companies show the total executive salaries to have been moderate and in fact low and there is nothing in the record to support the elimination or any part of it. We have already pointed out that the Master eliminated the whole of the particular salaries in question when only a portion was charged to the gas department, in which the Master clearly erred.

*Electric Department General Expenses:* The table set out in the City's brief, page 142, purporting to show the general expense in the electric department for the years 1903 to 1912 inclusive, is for the purpose of showing that certain expenditures of the Company in common between the gas and electric departments had increased in the gas department and decreased in the electric department. The Master found that certain expenses in common between the two departments should be apportioned on the basis of the relative number of consumers in the two departments.

The record shows that prior to April, 1908, the expenditures in question were apportioned and charged, fifty per cent. to the gas department and fifty per cent. to the electric department (Trans., pp. 137 and 769). But it developed upon the former trial that this apportionment of the common expenses should be readjusted upon the basis of the relative number of consumers in the two departments which at the time stood eighty per cent gas and twenty per cent electric. Prior to that time no particular attention had been given to the matter of proper division of these common expenses and too great a portion of such expenses were being charged to the electric department. The result of making the change in April, 1908, from a basis of one-half to the gas department and one-half to the electric department to eighty per cent. to the gas department and twenty per cent. to the electric department necessarily increased the amount charged to the gas department and decreased the amount charged to the electric department. The basis for charging these common expenses as made in April, 1908, was approved by the Master. The net result of the table set out in the City's brief is to show the decrease in the electric department between 1908 and 1912, which at first thought appears important but with the fact in view that the decrease was due to a readjustment between the two departments on a proper basis, the result is neither important nor unexpected.

With respect to the increase of the expenditures of the legal department referred to in the City's brief, it should be borne in mind that all claims such as personal injury claims or claims on account of injuries to property were charged to this department (Trans. p. 163).

The evidence shows that in 1907, $1500.00 of a personal injury judgment was charged to the account of legal expenses (Trans. pp. 163 and 2062, Sub. G 14), and in 1913 settlements in the amount of $2200.00 were charged to this account; in other words it is an acocunt that does not represent simply the

salaries paid for legal services, and in so far as it represents settlements or judgments against the Company neither the increase nor the decrease of the amount could be controlled by a rate ordinance. The evidence shows that in 1906 the total legal expenses in this account chargeable to the gas department was $757.43 (Trans., p. 1386, Sub. 483), while in 1907 the amount was $2,160.31 (Trans., p. 1386, Sub. 487), and in 1912 it was $7,954.73 (Trans., p. 1386, Sub. 492). The evidence shows important litigation outside of personal injury suits, claims and settlements and outside of this gas rate ordinance. The Company has pending a suit brought on behalf of the City of Lincoln to terminate its right to do business and to furnish gas at any price, claiming that the Company's franchise has expired. Such a suit is of great importance to the Company and involves practically the total investment of the Company, and the Company would necessarily be required to pay for the services of competent counsel. The City also brought suits against the Company involving occupation taxes in which judgments were recovered against the Company in the amount of something over $80,000.00, which were appealed to the Supreme Court by the Company and presented there with the results as indicated by the City in its brief. The record shows that the expenses of the preparation and hearing before the Master on this rate ordinance are not a part of the expenses involved in any of the years from 1907 to 1912, inclusive, but that a special account carrying all such expenses was opened January 1, 1913 (Trans., p. 1559) so that such expenditure are not involved in the expenditures considered by the Master in his 1912 valuation or his 1907 valuation.

*Working Capital:* It is argued in the City's brief that the Master allowed too much working capital and that the proper amount would be represented by the average monthly pay-rolls plus the average monthly vouchers. The argument being that if the total amount paid for labor and material,

including supplies, for twelve months should be divided by twelve the result would represent the necessary working capital.

The record shows that the Company was required and did keep on hand a large amount of supplies ($16,000, Trans. p. 1300), including pipe, meters, etc., and also was required and did keep on hand a large amount of coke and coal and oil. The record shows that in 1907 at the time the inventory was taken the Company had on hand more than three thousand tons of coal. It was necessary that the Company protect itself at all times against traffic conditions, weather conditions and trade conditions and was obliged to keep ample supplies of all of its materials on hand so that in case of temporary delays or shortage from any cause, the Company could go on for a considerable period and serve the public. The City's basis of determining the working capital would limit the Company to the amount necessary for one month and where the Company had three thousand tons of coal on hand the City would consider only that part on hand as a part of the working capital which would represent the average monthly consumption of coal for the year, which would not represent the amount the Company had invested in coal and had on hand during any of that time, but would represent about one-third or one-fourth of it.

*Depreciation:* It is argued in the City's brief that Mr. Lea presented the sinking fund method of taking care of the depreciation for the purpose of gaining some advantage for the Company in this case. The fact is that the City on the former hearing presented Professor Beemis as its expert, who came into the case for the purpose of advocating for the City the sinking fund method of determining and providing for depreciation (Trans., p. 217). The Company through Mr. Lea's testimony presented in detail throughout the valuation of the Company's property both the straight

line depreciation and the sinking fund annuity (Trans. p. 1304, Sub. 1 to 22). The two methods are completely and definitely set out in Mr. Lea's valuation. Depreciation is an operating expense and the Company took the position that if the straight line method was employed then it would be necessary to provide a larger amount in operating expenses to take care of it than if the sinking fund method was employed and we were indifferent as to which method was used. The operating expenses would be increased or decreased according to the amount of the depreciation. The City first used the sinking fund method and urged its adoption (Trans. p. —) on the former hearing and before this Court as is shown by a reference to the brief presented to this Court by the City, but later upon the hearing before the Master adopted the straight line method. Its expert witness applied the straight line method of depreciation to the physical property, assuming a life and accepting the Company's statement for the ages of the property so far as past depreciation was concerned, but as to future depreciation and for the years of 1907 to 1912 attempted to measure it by a certain number of cents per thousand feet of gas sold, which method the Master found to be improper, bearing no direct relation to the subject of depreciation. It is evident that neither the straight line method nor the sinking fund method can be properly applied without qualification to past depreciation in reaching present value. Either the straight line method or the sinking fund method would be proper in measuring past depreciation in so far as it applies to service value. Either method would be proper in measuring depreciation in the future, because you have an established value, which represents the actual present value, and we assume that the actual present value less depreciation will continue during the time the prescribed rate based upon that value continues. But as to past depreciation either method cannot be applied without qualification. If we assume the water gas set has a life of twenty years, and was purchased ten years ago at a cost of $20,000.00 and would cost

new at this time $10,000.00, applying the straight line method of depreciation to the present cost, we would have a result of $5,000.00, whereas if applied upon a rate fixed at the time the equipment was purchased, we would have a value of $10,000. If the same water gas set ten years ago cost $10,000.00 and has a life of twenty years, and at this time would cost $20,000.00, then by the application of the straight line method of depreciation the present value would be $10,000. The straight line method or the sinking fund method in measuring future depreciation assumes because the rate is established on the present value, that the rate will continue in effect as long as the present value continues less the depreciation and for that reason may be properly applied to future depreciation, but the courts and commissions in determining past depreciation accrued prior to the rate in question determine the actual depreciation, not theoretical depreciation. Judge Munger upon the former hearing found that the property in 1907 as a whole had depreciated in the amount of $49,688.17 which was ten per cent of the value of physical property new exclusive of real estate and working capital. This $49,688.17 did not represent either the straight line or the sinking fund depreciation but represented the actual accrued depreciation as found by the court.

The amount of the depreciation should not fluctuate with market changes in the cost of equipment, but rather should measure the exhaustion in the equipment which should be compensated for in the operating expenses for depreciation based upon the original investment so that the original investment will remain unimpaired. The Company's property revalued as today would probably be fifty per cent greater than the valuation as of January 1, 1913, with depreciation deducted for the four years intervening because of the advances in the cost new equipment. The City valued the Company's gas mains in 1912 from $24.00 to $26.00 per ton and applied the straight line depreciation for the time the mains had been in use to the $24.00 to $26.00 per ton whereas

the mains cost the Company from $30.00 to $36.00 per ton and if the straight line depreciation had been applied to the $30.00 to $36.00 per ton, a much higher present value would have resulted. The cost at this time would probably be from $40.00 to $50.00 per ton and if the straight line depreciation was applied to that value covering the time the mains had been in use, the result would approximate the original cost notwithstanding the depreciation. The original investment when properly and fairly made should not be subjected to impairment by such radical changes as have occurred in the market value of equipment by making such market value the basis for the application of either the straight line or sinking fund depreciation without some qualification.

## IV.

## VALUATION AND RATE OF RETURN FOR THE YEARS 1907 TO 1912 INCLUSIVE.

The sales in 1912 in cu. ft. were 227,297 M. cu. ft. The actual operating expense with depreciation added as determined by Mr. Lea and exclusive of the occupation tax was $197,277. From this total operating expense the Master made the following deductions:

1. The expense of the new business department for the year 1912 was $19,692.64. The Master allowed $12,000.00 for this item of expense actually incurred by the Company or a reduction of $7,962.64 from the $197,277.00 total operating expenses, including depreciation.

2. The Master deducted $3,300.00 because of expenditures of the Company in common between the electric department and the gas department wherein certain expenditures in common were apportioned between the gas department and the electric department on the basis of eighty per cent to the gas department and twenty per cent to the electric department. The Master apportioned these expenses on the basis of seventy-three per cent to the gas department, and twenty-seven per

cent to the electric department, resulting in a deduction of $3,300.00. The number of consumers in the two departments varied somewhat from year to year, and in 1907 stood in a ratio of eighty per cent gas and twenty per cent electric consumers, and for the ten years 1902 to 1912 inclusive, the average was seventy-nine per cent gas and twenty-one per cent electric, which we assume to be the fair basis of apportioning the common expenses (Trans. p. 1849). If the seven per cent deduction resulted in $3,300.00 then one per cent would result in one-seventh of that amount or $471.42 and the one per cent would represent the difference between eighty per cent and twenty per cent and seventy-nine per cent and twenty-one per cent so that the deduction in any event should not have been for more than $471.42 in place of $3,300.00.

It is evident the Master considered the common expense which he apportioned on the basis of seventy-three per cent to the gas and twenty-seven per cent to the electric departments in the amount of $47,142.00 upon which amount seven per cent reduction would result in $3,300.00. It is impossible to determine from the report or the record what constitutes the $47,142.00 of common expenses.

In 1907 the common expense was apportioned on the basis of fifty per cent electric department and fifty percent gas department, but the Master made no correction in the apportionment for 1907 and in this his report was clearly in error if his basis for apportionment was correct in 1912. And had the correction been made by the Master, the common expense in 1907 would have been increased in the gas department thirty per cent, which would have decreased the net earnings $14,142.60 and would have reduced the Master's net earnings for that year from $27,179.00 with the occupation tax eliminated to $13,036.40 considering the common expense in the amount of $47,142.00 assumed by the Master in 1912, and would have rseulted in the net earnings on the Mas-

ter's valuation of 2.7%. If it was proper for the Master in 1912 to apportion the common expense upon the basis of the relative number of consumers in the gas and electric departments then there could be no escape from the necessity for making the same apportionment in 1907 on the same basis notwithstanding it would result to the disadvantage of the City.

3. The Master deducted $3,600.00 covering the salaries of Mr. Henry L. Doherty and Mr. Charles A. Frueauff, representing the total amount for the year 1912 paid to Mr. Doherty and Mr. Frueauff. The total amount in any event should not have been deducted by only seventy-nine per cent thereof or $2,884.00.

4. Mr. Lea included in the $197,277.00 depreciation in the amount of $20,865.03. The Master allowed for depreciation in 1912, $12,000.00 which would result in a deduction of $8,865.03 bringing the total operating expense down to $177,314.33.

5. To the $177,314.33 should be added the occupation tax of three per cent on $227,297.00 at the $1.00 rate, or $6,818.91, which results in a total operating expense on the Master's basis with the corrections in his figures, as above indicated, $184,128.24, leaving the net earnings for 1912 at $43,169.00. The Master in making the computation by reason of the errors above noted, reached the figure of $46,658.00. The errors, however, are apparent.

The Master does not give the value of property for any of the intervening years between 1907 and 1912, and so far as the operating expenses are concerned gives only the amounts for such years as shown by the Company without any definite deductions, so that no exact figure can be made of the net earnings for such intervening years. However, the Master found that the total depreciated value of the property added between the years 1907 to 1912 inclusive, was $240,000.00.

The construction account (Trans. p. 1896) shows the total construction for 1907 in the gas department to have been

$16,017.70; for 1908, $73,638.84; for 1909, $23,031.93; for 1910, $50,248.06; for 1911, $20,033.10! for 1912, $27,167.72, which is exclusive of the $30,484.43 paid on house service by consumers during said period (Trans. p. 1826).

In view of these expenditures shown in the construction account and in the absence of any findings of value, by the Master for the intervening years, it is necessary to assume an apportionment of the $240,000.00 added depreciated value for the years covered by the expenditures. For the purposes of the calculations which are here submitted we have apportioned the $240,000.00 equally between the six years, 1907 to 1912, being $40,000.00 for each year. If the $40,000.00 is deducted from the valuation found by the Master at the close of the year of 1912 and $10,000.00 added covering the depreciation on the property for that year exclusive of the $240,000.00 depreciated value added between 1907-1912 inclusive, we would reach approximately the Master's value of the property at the beginning of the year of 1912 before the $40,000.00 additional depreciated value had been added and before the $10,000.00 depreciation had been taken off and by the same process working back to 1907 we can reach approximately a value for each of the years on the Master's basis of valuations for the year 1912.

The operating expenses for the intervening years we must necessarily assume to be the amount actually expended by the Company as we have no deductions by the Master except for the year 1912, the 1907 operating expenses being allowed by the Master as reported by the Company. The 1913 operating expenses were offered in evidence as shown in Exhibit "424," page 2060, and the new construction in 1913 more than offset the depreciations so that it is altogether fair to the City to assume the present depreciated value in 1913 the same as found by the Master in 1912. The table below shows the valuation, net earnings and per cent of net earnings on the valuation for each of the years 1907 to 1912 inclusive, prepared as above stated.

## MASTER'S VALUATIONS.

1.

Master's Valuation as indicated above not including the $100,000.00 of going value found by Master but excluded.

| Year | Valuation | Actual Net Earnings | Per Cent. |
|---|---|---|---|
| 1913 | $676,567 | $23,791 | 3.4% |
| 1912 | 676,565 | 23,257 | 2.4% |
| 1911 | 646,565 | 35,309 | 5.4% |
| 1910 | 616,565 | 39,569 | 6.4% |
| 1909 | 586,565 | 51,076 | 8.7% |
| 1908 | 556,565 | 41,982 | 7.5% |
| 1907 | 496,565 | 27,179 | 5.4% |

2.

Master's Valuation including the $100,000 of going value found by Master, but excluded.

| Year | Valuation | Actual Net Earnings | Per Cent. |
|---|---|---|---|
| 1913 | $776,567 | $23,791 | 3. % |
| 1912 | 776,567 | 23,257 | 2.9% |
| 1911 | 746,565 | 353,091 | 4.7% |
| 1910 | 716,565 | 39,569 | 5.5% |
| 1909 | 686,565 | 51,076 | 7,4% |
| 1908 | 656,565 | 41,982 | 6.3% |
| 1907 | 596,565 | 27,179 | 4.5% |

## LEA'S VALUATION.

| Year | Valuation | Actual Net Earnings | Per Cent. |
|---|---|---|---|
| 1913 | $1,090,913 | $23,791 | 2.1% |
| 1912 | 1,090,913 | 23,257 | 2.1% |
| 1911 | 1,051,172 | 35,309 | 3.3% |
| 1910 | 985,878 | 395,690 | 4. % |
| 1909 | 926,712 | 51,076 | 5.5% |
| 1908 | 830,120 | 41,982 | 5. % |
| 1907 | 784,682 | 27,179 | 3.4% |

The two and one-half occupation tax under the ordinance for the years 1907, 1908, and 1909, has been excluded from the operating expenses in the above table. The occupation tax of three per cent for the years of 1910, 1911 and 1912, at the one dollar rate has been included as the case involving the validity of that ordinance is awaiting a determination of the rate in order to fix the amount on which to compute it.

The average for the period according to the Master's findings as above in tabulation one would be 5.7%, and in tabulation two would be 4.9% and the average for the period as shown by the Company's valuation and its actual operating expenses would be 3.6%.

The evidence shows that in 1904 the Company was struggling to get money for its operating expenses and for extensions and betterments on its 7% notes secured by double the amount of the notes in bonds plus 2% commission on the notes and was unable to get money on that basis and the stockholders advanced $100,000.00. The rate of gas in Lincoln about that time had been reduced 30c per thousand. The evidence shows that in 1909 the Company's first mortgage bonds in the amount of $333,000.00 would mature the following year and the Company, in order to get the money to take up said bonds, was obliged to issue short time 6% notes, for which the bonds were held as collateral secured by a first mortgage in the amount of $333,000.00 on the combined properties of the gas and electric departments. On that basis it was necessary for the Company to suffer a discount and the notes were sold under the order of the Railway Commission on the basis of 96c on the $1.00 resulting in an interest charge of 7.6%. The evidence also shows that when those notes matured it was necessary for the Company to take them up by another note issue under like conditions. It is absurd to say that a fair rate of return upon investment in the properties would be 5% or 6% in face of the fact that in financing the Company's needs for money where the security was a first mortgage lien limited to

$333,000.00 on the combined properties of the gas and electric departments, the Company was obliged to pay 7.6%. If the Company was obliged to pay 7.6% for money to maintain its business and properties and for betterments and extensions in 1909 to 1912 a rate or return short of that amount would be confiscatory, because it would not be a fair rate of return determined by the actual experience of the Company.

In conclusion we want to again urge upon the attention of the court that enforcement of the ordinance against the Company would result in confiscation of practically the entire property of the Company. The 20 cents per thousand refund with interest amounts to approximately $525,000.00. The entire earnings of the property between the years 1907 and 1912 were devoted to (1) payment of bond interest and, (2) the maintenance and operation of the property. The application to the Railway Commission for permission to issue the $500,000.00 of notes shows that the difference between the $333,000.00 of bonds retired and the $500,000.00 was to cover money furnished for extensions and betterments in the property. The Master's valuation as of January 1, 1913, was $676,565.00. In this situation the confiscatory character of the rate ordinance in question appears to be clearly and conclusively demonstrated.

Respectfully submitted,

STATEMENT OF CASE:

I. LEGAL PROPOSITIONS:

1. Weight to be given to master's report..... 4
2. Items usually included in "Overhead cost"..... 5
3. "Straight line" method most commonly used.... 5
4. Actual figures should be produced as to "Overhead cost" ..... 5
5. Working capital equals average monthly payroll and vouchers ..... 5
6. "Going Value," to what extent allowable..... 5
7. The value of the business must be excluded..... 6
8. Condemnation case and rate case distinguished.. 6
9. Paving over mains, excluded..... 6
10. Property not used or useful, excluded..... 6
11. Failure to produce Sloan & Huddle report..... 6
12. Cost of exact reproduction of obsolete equipment no criterion ..... 7
13. Past blunders cannot be taken care of by an allowance out of current operating expense..... 7
14. Complainant's duty to make full disclosure.... 7
15. Lincoln city council had authority to enact this ordinance ..... 7
16. Burden on complainant to show fair division of expense between gas and electric departments; also to show how far renewals and extensions have been charged to operation..... 7
17. Rate may be unreasonable yet not confiscatory... 8
18. Extensive replacements cannot be charged to current operating expense ..... 8
19. New construction should be paid for by the company's own funds ..... 8
20. Renewals and extensions must be excluded from operating expense or from the property valued. 8

PAGE

21. Meter connections and service pipes paid for by consumers not part of company's property for rate purposes ..... 8
22. Capitalization as evidence of present value..... 9
23. Probable effect of new rate on increased sales... 11
24. Commission on sale of bonds and bond interest not proper operating expense, nor part of capitalization ..... 12
25. The rate having been attacked in advance of a practical test, burden on complainant to show rate confiscatory beyond any just or fair doubt. 12
26. What the company is entitled to ask by way of return ..... 13
27. The public not concerned with whether complainant uses its own funds or borrows them, nor can a return be demanded upon watered stock. 13
28. This court will not interfere even though it may consider the rate under the ordinance slightly too low, unless the rate has been given a practical test ..... 14
29. Master not bound to follow expert testimony.... 15
30. Master not required to furnish a summary of the evidence ..... 16
31. As to the qualifications of Alton D. Adams to testify as an expert ..... 17
32. Not necessary for master to separate findings for separate items of works equipment..... 19
33. Validity of complainant's franchise cannot be determined here nor can its value be included as a part of its assets for rate purposes..... 20
34. Organization expense cannot be capitalized..... 24

II. ARGUMENT:

1. General discussion as to the record..... 25
2. Master's valuation, as of January 1, 1913..... 26
3. Master's valuation and conclusions for year 1907. 29
4. Burden of proof on complainant..... 32
5. Real estate valuation ..... 35
6. Valuation of buildings..... 38
(a) As of January 1, 1907..... 41
(b) As of January 1, 1913..... 41
7. Valuation of works equipment..... 42
8. Valuation of distribution system..... 46
(a) Excessive "overhead," paving over mains, and service pipes paid for by consumers eliminated ..... 53
9. Overhead charges ..... 55
(a) Engineering, etc. ..... 56
(b) Organization and legal expense..... 61
10. Working capital ..... 67
11. Going value ..... 69
12. Depreciation ..... 79
(a) Amount to be deducted in arriving at present value ..... 80
(b) Amount to be allowed out of income to care for future depreciation ..... 92
13. Revenue ..... 106
14. Operating expense ..... 109
(1) As reported by the company..... 109
(2) Deductions which should be made..... 148
(a) Excessive items ..... 148
(1) Expense of New York office..... 148
(2) Incidental expense ..... 154
(3) Excessive legal expense..... 157
(4) Expense of present litigation.... 159
(5) Sundry expense ..... 160

### STATEMENT OF CASE.

In the fall of 1906 the city council of the city of Lincoln, Nebraska, passed an ordinance reducing the price of gas from $1.20 to $1.00 per one thousand cubic feet. The ordi-

nance was to take effect December 1st, 1906. Complainant refused to comply with said ordinance and on the 27th day of December, 1906, filed its bill in the Circuit Court of the United States, in and for the District of Nebraska, against the city of Lincoln and its then mayor and city attorney, praying an injunction against the enforcement of said ordinance on the ground that the rate fixed was not compensatory and that the ordinance was therefore violative of the 14th Amendment to the Constitution of the United States. In its bill, as an incident to the main purpose, complainant also sought to restrain the enforcement of an ordinance of said city providing for an occupation tax of 2 1/2 per cent of its gross receipts from the sale of gas. This last mentioned ordinance has never been complied with by complainant, its excuse being the one set up in the bill in this case, namely, that it was discriminatory and void.

The cause was tried to the court without the aid of a master. The court found the occupation tax ordinance to be discriminatory and void and enjoined its enforcement, but held the gas rate ordinance valid. A restraining order had been issued against the enforcement of the gas rate ordinance at the commencement of the suit and this was ordered to remain in force, pending an appeal to this court by complainant, upon its execution of a bond with sureties approved by the clerk of the court conditioned for the repayment to gas consumers of the difference between the old rate and the new in the event the gas rate ordinance should finally be upheld. The bond was given and the appeal was perfected. The case was submitted to this court at the December term, 1911. This court reversed the judgment of the lower court and ordered the case remanded with directions to appoint a special master to take such additional evidence as the parties might wish to offer and to make

findings of fact and conclusions of law and for such other proceedings as a proper disposition of the case might require.

When the matter of the appointment of a Special Master came before District Judge W. H. Munger, the attorneys for the respective parties were called together, and the names of a number of eminent lawyers of the state were submitted to them, with the request that they endeavor to agree upon some one of the attorneys thus suggested. Without hesitation, Judge John J. Sullivan was selected, and duly appointed by the court. We are sure that counsel for the plaintiff will agree with us that Judge Sullivan is one of the ablest, and most eminent lawyers of our state. He is a lawyer of wide experience, and has the respect of the bench and bar of Nebraska, and is widely known throughout the state as a man of unquestioned legal ability and integrity. He was at one time associate justice and then chief justice of our supreme court. No one who knows Judge Sullivan and is acquainted with his history as a lawyer, as a district judge, and as a member of our supreme bench, will deny that any conclusion reached by him either upon a legal question or upon any question of fact based upon the consideration of conflicting evidence is entitled to very great weight.

Complainant excepted to substantially all of the findings of fact and conclusions of law contained in the master's report. The exceptions were heard before Federal District Judge Morris of Duluth, who overruled them so far as they related to the validity of the gas rate ordinance, but sustained them so far as they related to the occupation tax ordinance. It will be remembered that at the former trial Judge W. H. Munger held that the occupation tax ordinance was void, whereas the master in his report at the present trial held it valid and allowed the complainant to in-

clude such tax in its operating expenses notwithstanding it had never paid any tax under the ordinance and was then litigating it not only in this suit, but in the state courts. Judge Morris took the view of Judge Munger rather than that of the master and held against the occupation tax ordinance. A decree was entered upon the master's report dismissing the bill as to the gas rate ordinance. Complainant then applied for an order reinstating the restraining order pending an appeal to this court, which order was granted upon condition that complainant should file a bond with the clerk of the court in the sum of $575,000 conditioned for the repayment to gas consumers of the difference between the old rate and the new in the event the gas rate ordinance should finally be sustained. The bond was filed and approved and the appeal to this court was perfected. This court advanced the case for hearing at the October, 1917, term.

## I.

## LEGAL PROPOSITIONS INVOLVED.

### 1. Weight to be given the master's report.

**We concede that the report of a master may be set aside by the court, modified or corrected in any manner not inconsistent with the justice of the case. This power, however, is not to be exercised except for good cause shown.**

*Jafrey* v. *Brown*, 29 Fed. 477.
*Carey* v. *Lovell*, 31 Fed. 346.
*National Folding Box Paper Co.* v. *Dayton, etc.*, Co. 91 Fed. 824.

**The report, so far as the facts are concerned, is given the effect of the verdict of a jury. We doubt if any case can be found where the master's report has not been followed where his findings were in favor of the rate complained of.**

*Gerard etc. Co.* v. *Cooper, et al.*, 162 U. S. 529, 40 L. Ed. 1062.

*Des Moines Water Co.* v. *City of Des Moines*, 194 Fed. 557.

*Crawford* v. *Neal*, 144 U. S. 585, 36 L. Ed. 552.

*Peter L. Kimberly* v. *Chas. D. Arms, et al.*, 129 U. S. 512, 32 L. Ed. 764.

*Emil Boesch, et al.*, v. *Albert Graff, et al.*, 133 U. S. 697, 33 L. Ed. 787.

*John T. Davis, et al.*, v. *John H. Swartz, et al.*, 155 U. S. 631, 39 L. Ed. 289.

**2. As to what items are usually included in "overhead cost."**

*Whitten, Valuation, etc.*, Sec. 240.

*Foster, Engineering Valuation, etc.*, p. 17.

**3. That "straight line" method of depreciation is the one most commonly employed.**

*Hayes, Pub. Utilities*, secs. 139 and 162.

*Foster, Eng. Val.*, p. 20-21.

**4. That actual records and figures should be produced as to overhead costs, rather than to rely on opinions and theories of engineers.**

*Whitten*, Sec. 240.

*Cumberland Telegraph & Tel. Co.* v. *City of Louisville*, 187 Fed. 637.

**5. "Working capital equals average monthly payroll and average monthly vouchers."**

*Foster, Eng. Val.*, p. 22.

**6. That such value as inheres in the physical property because it is connected up with an established business may be included and is presumed to have been included by the witnesses on value.**

*Des Moines Gas. Co.* v. *Des Moines*, 238 U. S. 153, 59 L. Ed. 1244.

*Cumberland Tel. & Tel. Co.* v. *City of Louisville*, 187 Fed. 637.

*Cedar Rapids Gas Light Co.* v. *Cedar Rapids*, 223 U. S. 655, 56 L. Ed. 594.

**7. Going value in the sense of business value not a proper element to be included as an asset in a rate case.**

*Minnesota Rate Cases*, 230 U. S. 352, 57 L. Ed. 1511.

**8. Going value allowed in Omaha water case was business value such as described by Mr. Lea. The Omaha case recognizes a distinction between a rate case and a condemnation case in respect to going value.**

*Omaha* v. *Water Co.*, 218 U. S. 180, 53 L. Ed. 991.

**9. That paving over mains should be excluded.**

*People* v. *Wilcox*, 104 N. E. 911.

*Des Moines Gas Co.* v. *Des Moines*, 238 U. S. 153, 59 L. Ed. 1244.

**10. That the unused real estate and equipment should be excluded.**

*Cedar Rapids Gas Light Co.* v. *Cedar Rapids*, 120 N. W. 966, 138 A. S. R. 299.

*Spring Valley Water Co.* v. *San Francisco*, 165 Fed. 667.

*Pietee* v. *Brooklyn, etc., Co.*, Pub. Utility Rep. 1915A, p. 46.

**11. Failure to produce the Sloan and Huddle report creates a presumption that it would have been unfavorable to plaintiff's case.**

*Jones on Evidence*, Sec. 19.

*Fonda* v. *St. Paul City Ry. Co.*, 70 A. S. R. 341.
*Barnes* v. *Shreveport City R. R. Co.*, 47 A. S. R. 400.
*Star Mills* v. *Bailey*, 140 A. S. R. 370.

**12. That Mr. Adams was right in estimating what it would cost to construct modern out-of-doors purifying boxes rather than the present ones.**

*Cedar Rapids Gas Light Co.* v. *Cedar Rapids*, 138 A. S. R. 299, (308).

**13. That the Company cannot demand rates high enough to make up for past blunders and bad management resulting in failure to provide for accrued depreciation.**

*Knoxville* v. *Knoxville Water Co.*, 212 U. S. 1, 53 L. Sd. 371.

**14. Duty of plaintiff to make a full, fair and complete showing of its operating expense and to establish that they are necessary and reasonable.**

*State* v. *Adams Express Co.*, (Neb.) 122 N. W. 691.
*Chicago & Grand T. R. Co.* v. *Wellman*, 143 U. S. 339, 36 L. Ed. 176.

**15. Section of Nebraska statutes giving Lincoln city council power to regulate gas rates.**

*Revised Statutes* 1913, Sec. 4476.

**16. In all cases of joint use of property, or joint expense of the two departments, the burden is on the Company to show that correct division has been made. Also to show to what extent renewals and extensions have been made from current receipts and charged to operating expense.**

*Railway Commission* v. *Cumberland Tel. & Tel. Co.*, 212 U. S. 414, 53 L. Ed. 577.

**17. Rate may be unreasonable yet not confiscatory.**

*San Diego L. & T. Co.* v. *Jasper,* 189 U. S. 439, 47 L. Ed. 892.

*Southern Pac. Co.* v. *Bartine,* 170 Fed. 725.

**18. That extensive replacements, such as the rebuilding of the benches and the station meter, should be spread over a period of time equal to the life of such improvements has been settled by this court, in Illinois Cent. R. Co. v. Interstate Commerce Com., 206 U. S. 441, 51 L. Ed. 1128, where the rule is stated thus:**

> "Expenditures for permanent improvements and equipment should not be charged to current or operating expenses of a single year for the purpose of testing the reasonableness of an increased freight rate."

**19. It is the duty of a public service corporation to provide its own funds to take care of new construction and all permanent improvements, and these should not be charged to operating expenses.**

*Illinois Cent. R. Co.* v. *Interstate Commerce Com.,* 206 U. S. 441, 51 L. Ed. 1128.

*Wyman Pub. Service Corp.,* Sec. 1163.

**20. Where items of this character have been paid for from current receipts and charged to operating expense, they should be excluded from consideration in estimating the value of the property upon which the Company is entitled to earn dividends, or excluded from the operating expenses of a single year.**

*San Diego Water Co.* v. *San Diego,* 118 Cal. 556 (574), 62 A. S. R. 261 (275).

*Illinois Cent. R. Co.* v. *Interstate Commerce Com.,* 206 U. S. 441, 51 L. Ed. 1128.

**21. As to the matter of meter connections and service pipes, these are paid for by the consumers and do not represent an outlay by the Company at all. It is charged to operating expenses in the**

**first instance and then collected from the customer (Honeywell, bottom p. 151, Vol. 1), and under no view of the matter can this item be included for any amount.**

*San Diego Water Co.* v. *San Diego,* 118 Cal. 556, 62 A. S. R. 261, (275).

See, also, *Smyth* v. *Ames,* 169 U. S. 466, 42 L. Ed. 819.

### 22. Capitalization as Evidence of Present Value.

In *Knoxville* v. *Knoxville Water Co.,* 212 U. S. 1, 53 L. Ed. 371, the weight to be given to nominal capitalization, in an inquiry as to the value of the tangible property of a corporation, where the same is largely fictitious, was stated in the third paragraph of the syllabus, thus:

> "Capitalization affords no guide to the present value of the tangible property of a waterworks company which is objecting to the rates fixed by municipal ordinance as confiscatory, where substantially all the common and preferred stock was issued under construction contracts entered into with persons who controlled the corporate action, and was greatly in excess of the true value of the property furnished under the contracts."

See, also, *Smyth* v. *Ames,* 169 U. S. 466, 42 L. Ed. 819.

A public service corporation, regardless of the amount of its stocks and bonds, is only entitled to a fair return on the value of the property at the time used for the convenience of the public. When this return has been received by the corporation, it becomes the property of the corporation to be applied to interest upon bonds and the balance distributed in dividends. If the net income is not sufficient to pay the interest on bonds, then it is the misfortune of the bondholders and not of the public. If there is only enough of a net income to pay interest on bonds, and nothing is left for dividends, this is a misfortune of

the stockholders. This matter is well stated by Judge Garoutte in *San Diego Water Company* v. *City of San Diego,* 118 Cal. 556, 62 A. S. R. 261, in the following language:

> "But as to the amount of the bonded indebtedness, or the amount of interest annually accruing thereon, we fail to see their materiality in determining the value of the plant, or the sum total of revenue to be raised from the sales of water. It is not a question in which rate payers are concerned, whether the water company has no outstanding indebtedness, or is floundering under a bonded debt which threatens to sink it at any moment. If the municipality is required to establish a scale of rates which will produce a revenue sufficient to pay interest upon outstanding bonds, this provision of the constitution would not only be a perpetual guaranty to the bondholders for the payment of their annual interest, but a constant incentive to additional issues of bonds. Such conditions were never contemplated by anybody. It is the duty of the municipality, when it has arrived at a determination as to the valuation of the plant, to determine the necessary outlay for the ensuing year; then to determine what would be a reasonable, just, and fair compensation to the company, based upon the valuation of the plant, and thereupon to fix a schedule of rates which will produce that sum of money. If there be outstanding bonds, the company may apply its income to the payment of interest thereon. If there be no outstanding bonds, this income may pass to the pockets of the stockholders in the shape of dividends declared. A municipality must fix a fair and just rate for the water, based upon the valuation of the plant, and when it has done this, its duty has been performed, and the revenue collected under such rates is the property of the company, to do with as it seems best."

The public should only be required to pay a fair and reasonable return upon the present reasonable value of the Company's property used at the time for the convenience of the public, and can not be required to provide,

in addition thereto, for the payment of interest upon bonded or other debts; *and the rate should be the same whether the works are acquired or constructed by the Company from its own resources, or with money borrowed from others.*

See, *Redlands, etc., Water Co.* v. *Redlands,* (Cal.) 53 Pac. 843, 844.

**23. Probable Effect of New Rate.**

It is quite probable that the effect of the reduced rate would somewhat reduce the earnings of the Company during the first year, but all experience shows and this court has recognized in many cases that the probable effect of a reduced rate on such commodities as gas would be to greatly increase the consumption without a corresponding increase of expense, and that in time the increased consumption of gas, resulting from the reduced rate, would be sufficient to more than overcome the amount of the reduction.

See testimony of Professor Bemis in relation to this subject (pp. 229-30 vol. 1, printed record).

As Mr. Honeywell testified, the Company voluntarily reduced the rate from $1.35 net, after allowing discount for prompt payment, or $1.50 without the discount, to $1.20 per thousand (pp. 173-77, printed record). It will be seen that the net rate for gas from July, 1900, to June, 1904, was $1.50 for light and $1.25 for fuel, and from the latter date the net rate has been $1.20 for both.

The following table (Exhibit "122," p. 304, vol. 1, printed record) shows that, notwithstanding said reduction, the net earnings very greatly increased:

| Year | Cubic feet of gas sold | Average net price per-1000 | Gross gas earnings | Operating expense | Net earnings |
|---|---|---|---|---|---|
| 1902 | 75,680,800 | $1.3833 | $104,766.66 | $ 74,164.96 | $30,601.70 |
| 1903 | 98,343,300 | 1.3664 | 134,471.06 | 81,582.79 | 52,888.27 |
| 1904 | 117,429,858 | 1.3015 | 152,846.15 | 101,472.85 | 51,373.30 |
| 1905 | 143,690,700 | 1.2086 | 173,619.03 | 105,421.95 | 68,197.08 |
| 1906 | 153,663,600 | 1.2090 | 185,778.26 | 127,049.24 | 58,729.02 |
| 1907 | 179,366,300 | 1.2031 | 215,776.20 | 141,924.37 | 73,851.83 |

Judge W. H. Munger, in his opinion in the case at bar at the first trial (Vol. 1, p. 24, Printed Record), referred to this matter in the following language:

> "The record shows that in June, 1904, complainant voluntarily reduced its rates from approximately $1.50 per thousand to $1.20, and the amount of gas consumed and net profits resulting considerably increased. The inquiry in cases of this character is not alone what has complainant theretofore earned, but it is what will be the effect of the ordinance reducing the rate upon the future net earnings of the company, and it devolves upon complainant to show, not that the past rates have not produced a reasonable return, but that the rate prescribed by the ordinance will not in the future produce a reasonable return."

In *Wilcox* v. *Consolidated Gas Co., supra*, this court, at page 51 of the opinion, recognized the strong probability that the earnings would increase under the reduced rate as a factor to be considered.

**24. No allowance can be made for commission on sale of bonds, nor can bond interest nor cost of paying it be charged to operation.**

> "No distinction can be made between corporations which have completed their works with their own money and those which have borrowed money for that purpose from others. In either case, the money actually and reasonably invested is the basic criterion of the revenue to be allowed."
>
> *San Diego Water Co.* v. *San Diego,* 118 Cal. 556, 62 A. S. R. 261.

**25. The rate fixed by this ordinance not having been put to a practical test, but having been suspended by this injunction, the ordinance will be upheld unless the case is one leaving no just or fair doubt that the rate, if enforced, would be confiscatory.**

*Wilcox* v. *Consolidated Gas Co.*, 212 U. S. 19, 53 L. Ed. 382.

*Knoxville* v. *Knoxville Water Co.,* 212 U. S. 1, 53 L. Ed. 371.

*Ex Parte Young,* 209 U. S.. 123, 52 L. Ed. 714.
*San Diego L. & T. Co.* v. *Jasper,* 189 U. S. 439, 47 L. Ed. 892.

**26. "What the company is entitled to ask is a fair return upon the value of that which it employs for the public convenience. On the other hand, what the public is entitled to demand is that no more be exacted from it for the use of a public highway than the services rendered by it are reasonably worth."**

*Smyth* v. *Ames,* 169 U. S. 466, 42 L. Ed. 819.

"What the company is entitled to demand, in order that it may have just compensation, is a fair return upon the reasonable value of the property at the time it is being used for the public. The property may have cost more than it ought to have cost, and its outstanding bonds for money borrowed and which went into the plant may be in excess of the real value of the property. So that it cannot be said that the amount of such bonds should in every case control the question of rates, although it may be an element in the inquiry as to what is, all the circumstances considered, just, both to the company and to the public."

*The San Diego Land & Town Co.* v. *National City,* 174 U. S. 739, 43 L. Ed. 1154.

**27. In the opinion handed down by the lower court, in San Diego L. & T. Co. v. National City, 74 Fed., on pp. 87, 88, the court said:**

"Nor can it make any difference that the complainant in the construction of its plant and the carrying on of its work borrowed $300,000, on which it pays interest and for which, it may be, it issued its bonds. The buyer of such bonds, like the loaner of money on mortgages on real estate, does so with his eyes open. The loaner of money on a mortgage knows that conditions may be such as to increase the value of his security, or they may be such as to decrease its value. He takes the chances that everybody must take who engages in business transactions. The buyer of bonds issued by a water company, such as the complainant, has the like knowledge and the further knowledge that

the law, which every one is presumed to know, prescribes that the rates to be charged for the water furnished by the company, shall be established and fixed by a special tribunal."

In *Smith* v. *Ames, supra*, Mr. Justice Harlan, relative to the same subject, says:

> "If a railroad corporation has bonded its property for an amount exceeding its fair value, or if its capitalization is largely fictitious, it may not impose upon the public the burden of such increased rates as may be required for the purpose of realizing profits upon such excessive valuation or fictitious capitalization."

In *re Grain Shippers* v. *Railroad Co.*, 8 I. C. C. Rep. 158, it is said:

> "Whatever of wastefulness or mismanagement there may have been in the construction or antecedent history of the railroad, whatever of jobbery or of thievery even, it is apt to find its way into the capital account, until it is eliminated by some process of reorganization, and in the reorganization itself the capitalization has no relation ordinarily to the actual value of the property, but it is made to depend upon the convenience or even the whim of those who manipulate the reorganization scheme. To make the capital account of our railroads the measure of their legitimate earnings, or a rule, would place the corporation which has been honestly managed from the outset under enormous disadvantages.'

**28. In the recent case of City of Louisville v. Cumberland Telephone & Telegraph Co., 225 U. S. 430, 56 L. Ed. 1151, the lower court had granted an injunction against a new telephone rate because it found that the new rate would reduce the income of the Company to 3.6 per cent on its investment as found by him. This court disagreed with the lower court as to some items of valuation, and reversed the judgment of the lower court, using the following language:**

> "We express no opinion whether to cut this telephone company down to 6 per cent by legislation would or would not be confiscatory. But when it is remem-

bered what clear evidence the court requires before it declares legislation otherwise valid void on this ground, and when it is considered how speculative every figure is that we have set down with delusive exactness, we are of opinion that the result is too near the dividing line not to make actual experiment necessary. The master thought that the probable net income for the year that would suffer the greatest decrease would be 8.60 per cent on the values established by him. The judge, on assumptions to which we have stated our disagreement, makes the present earnings 5 10/17 per cent, with a reduction by the ordinance to 3 6/17 per cent. The whole question is too much in the air for us to feel authorized to let the injunction stand. Decree reversed without prejudice."

**29. The master was not bound to follow the expert testimony; he had the right, and it was his duty, to fix values in the light of all the evidence before him, tested by his own experience, at such figure as his best judgment dictated.**

**30. The Master's failure to Furnish a Summary of the Evidence.**

In his preliminary observations, beginning on page 36, vol. 1, of printed record, the master explains that a summarization of the evidence is quite impossible and would, in his opinion, be of no assistance to court or counsel. It is to be remembered that there was a very large number of witnesses produced and the testimony at the last hearing amounts to almost five thousand pages of typewriting, to say nothing of the very great number of exhibits and tabulations. To summarize this evidence would be impossible, and any attempt to do so would require weeks, if not months of labor. The master did the only practical thing under the circumstances to make his findings with respect to small subdivisions and to cite evidence, and give his reasons, only when necessary, to make clear his actual findings. The master certifies all of the evidence and filed the same with his report and that is the best that could be done in the premises. The order of reference did not require the master to summarize the evidence, and in the absence of such an order it was not necessary for him to do so.

> "The evidence, however, need not be stated or incorporated in the report, nor generally even the facts themselves."
>
> 34 *Cyc.* 846.
>
> "Except where so required by the order of reference, or where so required by the provisions of the statute, controlling the reference, the referee in making his report of the proceedings, had, under the rule, or order of reference, is not required to, and should not report the evidence."
>
> 34 *Cyc.* 843, and cases cited.
>
> *Welsh* v. *Briggs*, (Mass.) 90 N. E. 1146.
>
> "According to the practice, it would not have been proper for the master to report the entire evidence before him, as there was no order from the court to

that effect, nor to report even such portions of the evidence as related to the exceptions, without a request from the party excepting."

*Massie W. T. Co.* v. *Enterprise Tr. Co.*, 175 Fed. 6 (10)

"A master's report need only state (1) the ultimate facts, by reference to the pleadings, or otherwise, (2), his conclusions on the questions of law without discussion or argument and (3) make computation of the amount due."

*Manowsky* v. *Stephen*, (Ill.) 84 N. E. 354.

**31. As to the Qualifications of Alton D. Adams to Testify as an Expert.**

We quote the following from *Jones on Evidence*, (2nd Ed.), Sec. 368:

"It now becomes necessary to discuss at some length the conditions under which expert testimony may be given. While it is clear that the witness in order to be competent as an expert must show himself to be skilled in the business or profession to which the subject relates, there is no precise rule as to the mode in which such skill or experience must be acquired. Thus, the witness may have become qualified by actual experience or long observation without having made a study of the subject. *On the other hand he may be an expert although his knowledge has been derived from the study of the subject, and not from actual experience or practice in the business or profession.* Thus, it has sometimes been held that a physician may give opinions as to matters connected with his profession or with medical science, although in his own practice he may not have had experience as to such matters, and although his knowledge in respect thereto is derived from study only, even though he may not have made the disease under inquiry a specialty. On the same principle one who is familiar with the diseases of man may be allowed to testify as an expert concerning the disease of animals. The law of a foreign country or sister state may be proved not only by jurists and lawyers who have practiced their profession in that jurisdic-

> tion, but also by those not lawyers who, from their official position or business relations, have become acquainted with such laws. Courts will take notice that certain pursuits are so intimately connected with others as to give those following one of such pursuits unusual facilities for becoming acquainted with the other; and if the occupation and experience of the witness have been such as to give him the requisite means of knowledge of the subject, he may be competent as an expert, although engaged in some other occupation or even if he has abandoned the business to which the inquiry relates. It is necessary that the witness should possess the requisite skill either from actual study, experience or observation. The mere opportunity of obtaining such skill does not suffice.'

Numerous citations are given in the foot notes in support of the above quoted text, from which it will be seen that the Wisconsin cases, upon which counsel for the Company rely, are not in line with the holdings of other courts.

In *Central Ry. Co.* v. *Mitchell*, 63 Ga. 173, it was held that the opinion of a civil engineer derived solely from books was properly admitted.

The true rule is stated by the Indiana supreme court in *Isenhour* v. *State*, 62 N. E. 40, 87 A. S. R. 228, as follows:

> "If a witness exhibits such knowledge, gained from experiments, observation, standard books, or other reliable source, as to make it appear that his opinion is of some value, he is entitled to testify, leaving to the court, in its discretion, to say when such knowledge is shown, and to the jury what the opinion is worth."

**32. Failure of Master to Find and Certify Reproduction Cost, Age, Etc., of Separate Items in Works Equipment and Distributing System.**

It was not necessary that the master should include any of these matters in his findings. He was only required to find the present value of complainant's property, and each and all of said matters were but steps or processes leading to the final result. The plaintiff is entitled to a reasonable return upon the reasonable present value of its property, and that was the value found by the master. According to all authorities, the cost of reproduction, original cost, and market value are not the sole tests, but are matters to be considered in arriving at the fair present value. In the Minnesota rate case, 230 U. S. 352, 57 L. Ed. 1511, Mr. Justice Hughes quotes with approval the following from *Smyth* v. *Ames:*

> "In order to ascertain that value, the original cost of construction, the amount expended in permanent improvements, the amount and market value of its bonds and stock, the present as compared with the original cost of construction, the probable earning capacity of the property under particular rates prescribed by statute, and the sum required to meet operating expenses are all matters for consideration, and are to be given such weight as may be just and right in each case. We do not say that there may not be other matters to be regarded in estimating the value of the property. What the company is entitled to ask is a fair return upon the value of that which it employs for the public convenience."

The master expressly states in his report that he considered all of these matters in arriving at the present value of the plant. The master was not required to state the mental processes by which he arrived at his results, nor to give reason for any of his findings of fact.

> "Where, by order of reference the whole issues are referred, the referee is substituted for the court. The trial is to be conducted in the same manner as a trial by the court, and the referee's report stands as the decision of the court. His findings should contain just what the findings of the court should contain, nothing more and nothing less. Like the court, he is not required to find upon any other facts than those necessary to cover the issues in the case, and which enter into and form the basis of the judgment to be rendered upon his report. He is required to find upon the issues only, and not to report the evidence, or to explain the means or process by which he arrives at his conclusions."
>
> *Landell* v. *Cheney*, (Minn.) 52 N. W. 819 (919).

33. **Franchise.**

Neither the question as to whether plaintiff's franchise is valid nor as to whether it is or is not perpetual is involved here.

> "Whether such franchise was acquired or is held rightfully, is to be determined only in a direct proceeding to oust the corporation, or in a proceeding to which someone who claims a better title is a party."
>
> *Bronson* v. *Albion Telephone Co.*, (Neb.) 93 N. W. 201.

Judge W. H. Munger, at the former trial of this case, excluded franchise as an element of value in appraising plaintiff's property for rate purposes. His reasons for so doing are thus stated in the opinion:

> "I do not allow anything as the value of complainant franchise. It does not appear from the allegations of the bill or proofs that anything was paid for the franchise. The City simply granted to complainant,

without compensation, the right to use the public streets and alleys for the purpose of constructing and operating its plant. This was a mere right and privilege to complainant, and did not involve the expenditure of money. While it is true a franchise is a property right, which will protect complainant in its use of the streets and alleys for the purpose expressed, yet it involves no investment of money, complainant's investment being in its tangible property under authority of the franchise, and the public ought not to be taxed for a privilege which it has voluntarily granted. I do not think there is anything in the case of *Wilcox* v. *Consolidated Gas Co.*, 129 Sup. Ct. Rep. 192, which conflicts with this view. In that case the legislative enactment providing for consolidation of various companies expressly required that a value should be given to the franchise of the respective companies. For that reason the court sustained the value of the franchise thus fixed, but refused to recognize any increased value accruing during subsequent years by reason of the large increase in the tangible property from extensions, etc."

It is conceded that special franchises, such as this, partake of the nature of, and are regarded as property by the courts. Whatever value such a franchise has is based upon the earning power of the Company, and it has no value which can be estimated separate and apart from such earning power. We have not been able to discover that this court has ever passed upon the exact point here raised, viz., whether, in estimating the capital of a public service comporation for the purpose of fixing a basis for testing the validity of established rates, a separate valuation may be placed upon the special franchise separate and apart from the value of its tangible property, and included in the sum upon which the corporation is entitled to earn dividends.

In the case of *Wilcox* v. *Consolidated Gas Co.*, 212 U. S. 19, 53 L. Ed. 382, the company was allowed the value of the franchises of the several companies which were consolidated, the value allowed being that fixed by them at the time of the consolidation in 1884, under legislative authority,

and which entered into the new capitalization. The increase found by the lower court was rejected, but this, as we read the opinion, was upon the ground that the amount of the increased value was not properly arrived at. We are, therefore, left in doubt as to what this court would have done had the lower court had competent evidence before it as to the value of the franchise and had based its findings thereon.

The learned district judge who tried the Wilcox case below stated that his personal convictions were against placing any value upon such franchises in considering the compensatory character of rates, but felt constrained to follow the reasoning of former adjudications in which such franchises were recognized as property. His personal views were stated in this language:

> "For these reasons I believe that, on principle, a franchise should be held to have no value except that arising from its use as a shield to protect those investing their property upon the faith thereof, and that, considered alone and apart from the property which it renders fruitful, it possesses no more economic value than does an actual shield possess fighting value, apart from the soldier who bears it."

In *Wyman on Public Service Corporations*, the matter of franchise valuation is discussed in the light of the most recent authorities. The author lays down the rule that the value of the franchise should not be considered in regulating rates.

Section 1104 of that work reads as follows:

> "It should be clear that in estimating the capital upon which a public service company is entitled to a fair return the value of a franchise enjoyed by the company cannot be considered. The value of the franchise is based upon the capacity of the company to earn profits; and it becomes greater when the earnings of the company are increased. If, therefore, a high rate

of income could be justified on account of the great value of the franchise, this fact would in turn enhance the value of the franchise itself and so justify a still higher charge; and there would be no limit to the legal charge to the company which could be enforced should such franchise value be permitted to increase in this way, the capital charges. As Mr. Justice Savage in a late Maine case involving this point: 'In connection it should be noted that to say that the reasonableness of rates depends upon the rates which may be reasonably charged, seems to be arguing in a circle. If we should say that reasonableness of rates depended solely upon the value of the property, and that the value of the property depended solely upon the rates which may be reasonably charged, such would be the case. But neither proposition is true.' It unquestionably follows that such franchise values can not stand in the way of rate regulation. As Mr. Justice Peckham recently said in the supreme court of the United States, as to a valuation of the property of the Consolidated Gas Company, which included some millions for its franchises: 'Its past value was founded upon the opportunity of obtaining these enormous and excessive returns upon the property of the company, without legislative interference with the price for the supply of gas, but that immunity for the future was, of course, uncertain and the moment it ceased and the legislature reduced the earnings to a reasonable sum the great value of the franchise would be at once and unfavorably affected.'"

The language of Mr. Justice Hughes in the Minnesota rate case (230 U. S. 352, 57 L. Ed. 1511), in dealing with another matter, is quite applicable here, and is in accord with the doctrine of *Wyman on Public Service Corporations*, above quoted. On page 461 of the opinion Mr. Justice Hughes said:

"The value of the use, as measured by return, cannot be made the criterion when the return itself is in question. If the return, as formerly allowed, be taken as the basis, then the validity of the states' reduction would have to be tested by the very rates which the state denounced as exhorbitant. And, if the return as

> permitted under the new rates be taken, then the state's action itself reduces the amount of value upon which the fairness of the return is to be computed."

It seems to us that the rule should be that franchises of this character should be treated as property only to the extent necessary to protect the holder in the exercise of the rights granted therein, and upon the faith of which the company has expended its funds; but where the franchise is a mere voluntary grant by the public, for which no money has been paid, and where the Company has nothing invested therein, that no value should be placed thereon as an element in determining the compensatory character of rates. The Company has no actual investment in the franchise, and why should it be permitted to demand a return from the public upon a mere right to occupy the public streets which the public has gratuitously granted?

The Company's expert, Henry I. Lea, at the present trial gave it as his emphatic opinion that there is no franchise value to be included here.

He says (p. 1295, vol. 4, printed record):

> "There isn't any franchise value. Whether the Company has a franchise or not there is no value to the franchise that should be included in determining the value of the property as a whole, unless the Company has actually paid a specific sum for a franchise, and I know of no such payment having been made here for a franchise."

### 34. Organization Expense Cannot Be Capitalized.

There was no evidence whatever as to what, if any, expense was incurred in the organization of this company. The present company can have no claim for the expenses of organizing the original company in any event. For aught that appears in the evidence the initial cost of organizing the present company as well as its predecessor

may have been repaid long ago in the form of excessive earnings. At all events, the master included all such items in his overhead cost. This was in harmony with the usual practice of courts and commissions.

> *Whitten on Valuation of Public Service Corporations,* Sec. 262.

The cost of organizing the Company was not a proper capital charge.

> "Nothing can be allowed for the promotion and organization of the company, for it is immaterial by whom the plant may be owned in estimating its value."
>
> *Cedar Rapids Gas Light Co.* v. *Cedar Rapids,* (Ia.) 120 N. W. 966, 138 A. S. R. 299.

## II.

## ARGUMENT.

### 1. General Observations.

The testimony taken at the first trial of this case consisted of one large volume of printed matter containing 580 pages. The testimony taken at the last trial consisted of four large volumes of typewritten matter, amounting to almost five thousand pages, and in addition to this there were over four hundred exhibits, consisting of intricate and complicated tabulations by experts, maps, charts, blue prints, letters, telegrams, photographs, and various other documents. There were forty-eight witnesses sworn and examined and the master, Judge Sullivan, heard this testimony when it was introduced, saw the witnesses while on the stand, heard the explanations of the various tables and documents introduced, and heard the experts and the attorneys propound and explain their different theories as the case progressed. The taking of testimony continued at intervals for a little over one year. After the evidence was closed, counsel for

the respective parties spent weeks in digesting the evidence and preparing and printing briefs. There was an oral argument before the master which consumed four full days. After the submission of the case, the master took this enormous record consisting of the evidence taken at both trials, together with the briefs submitted, and, after several weeks of hard labor on his part, produced and filed the report now under consideration.

On nearly every question of fact involved in this case the evidence widely differed and was sharply conflicting, especially as to all property values and as to what should be allowed as legitimate operating expenses.

In later portions of this brief we shall undertake to show that the master was more than liberal with complainant, not only as to values, but as to its operating expenses. We shall point out large items of property which he valued as a part of the property upon which he estimated complainant's rate of return under the ordinance in question, which are neither used nor useful as part of complainant's gas plant. We shall show, also, that in the matter of operating expenses the master allowed numerous substantial items which should have been excluded.

The valuation placed by the master on practically all of complainant's property, though somewhat lower than that assigned to it by the company, is substantially higher than the valuations made by the witnesses for the city.

**2. The Master's Valuation of Complainant's Property, as of January 1, 1913.**

In that part of the master's report at page 52 of the printed record under the caption "Revision" will be found not only his valuation of the property as of January 1st, 1913, but

also his deductions as to complainant's rate of return under the $1 rate for the year 1912. His valuation was as follows:

| | |
|---|---|
| Real estate | $ 16,250 |
| Buildings | 29,381 |
| Works equipment | 179,310 |
| Distribution system | 351,624 |
| Working capital | 60,000 |
| Going value | 40,000 |
| Master's total value as of Jan. 1, 1913 | $676,565 |

It will be seen by reference to the above cited page of the record, that the master found that, with gas selling at $1.00, as fixed by the ordinance, complainant's gross receipts would have been $227,297, and that the legitimate operating expenses would have been $180,639, leaving the net income for 1912 at $46,658, or 6.9 per cent on the valuation fixed by the master.

It will appear by reference to the first sentence of the master, under the caption "Revision," that he allows an item of $8,195 occupation tax as a part of the operating expenses for the year 1912. We contended before the master, and in the lower court, that this was not a proper item as it was not being paid by the company, but was being contested in the state courts. Since the trial below the Nebraska supreme court sustained the complainant's plea in abatement and suspended action in the state courts to collect the occupation tax under an ordinance passed subsequent to the one involved in the first trial, holding that the validity of this second ordinance was necessarily involved, and was being litigated in this "Dollar Gas" suit in the federal courts.

The burden being upon complainant to show that the rate fixed by the ordinance is confiscatory, it cannot aid itself in its contention by including, as an item of operating expense,

an occupation tax which it is disputing and refusing to pay, and payment of which it is resisting in the courts. It is not sufficient for the company to show that it *may* be required to pay this occupation tax. It has assaulted this rate ordinance and one of the vital elements involved here is the legitimate and *actual* operating expense of the company and not what they *may* be. A similar question was presented and decided in *San Diego Water Co.* v. *City of San Diego*, 118 Cal. 556, 62 A. S. R. 261-275. We quote from the opinion on page 275, of the last cited publication:

> "The finding that the expenses of the company for the year in question were $40,000 is also attacked. The books of the company put the amount at $44,255.30. Of this amount, appellant objects to items of about $5,000 as unnecessary and improper, and objects particularly to an item of $12,800, being an unpaid bill which is disputed by plaintiff, and on which its liability is left doubtful. Counsel for respondents have not attempted to answer these points. As the evidence is presented to us in an unsatisfactory shape, we will say no more than that it does not support the finding. Whether all of the items complained of are proper or improper cannot be determined upon this record, but some of them are not shown to be proper."

If we eliminate this occupation tax of $8,195 and add it back to the receipts for the year 1912 the net receipts as per the master would be $54,853, which would be over 8 per cent upon the valuation fixed by the master.

The master's valuation also included a working capital of $60,000, which is almost four times the working capital actually used by the company, as we shall hereinafter point out, and an item of $40,000 going value, which we contend was improper.

### 3. The Master's Figures for the Crucial Year, 1907.

At page 52 of the printed record, under the heading "Valuation, Operating Expense and Net Income for 1907," will be found the master's valuation and conclusions as to net income for the year 1907. That is the crucial year for the purposes of this suit. The operations of years subsequent to that time are important only as they bear upon the validity of the rate when it was to go into effect. Fortunately for the city, the company was unable by its manipulation of operating expenses, and its unwarranted and unnecessary additions to its plant, far in excess of present demands, to make a showing for the years during which this suit has been pending that would in any way indicate that this dollar rate would operate to confiscate its property. The showing most favorable to the complainant is the one made for the year 1907.

The master arrives at his valuation for 1907 by deducting from his valuation for January 1st, 1913, all value, tangible and intangible which he finds was added to the plant after the year 1907. In this way he fixes his valuation for the latter year at $436,656.

It is to be noted that the amount deducted by the master in arriving at his 1907 valuation was $240,000. This was the *depreciated* value of all property, tangible and intangible, which the master found had been added to the plant after the year 1907, for he expressly states that the $240,000 is the value of such additions *as of January* 1, 1913. At the hearing below, on the exceptions to the master's report, counsel insisted that the master deducted the undepreciated amount of the additions found from the *depreciated* value found by him for the year 1913, and that in this way the amount deducted was larger and the value for 1907 smaller than it should have been. The master's report is not open

to that criticism. It is perfectly plain that the $240,000 deducted by the master is the depreciated value of the additions, and since his valuation as of January 1, 1913, ($676,565) was the *depreciated* value, the master was right in first finding the *depreciated* value of the additions before deducting them from his 1913 valuation in arriving at the 1907 valuation.

In his calculations as to the 1907 income the master found that at the $1.00 rate the gross income for that year would have been $178,626, and that the legitimate operating expenses should have been $156,277, leaving a net return for that year under the rate fixed by this ordinance of $22,349, or 5.2 per cent on the valuation found by him for that year. This, however, is upon the basis of the actual sales for that year under the old rate and does not take into account increased sales which would probably follow, and which all experience tells us would follow, a reduction of the gas rate. It is also to be remembered that that the master's calculation for 1907 included a substantial amount for going value, since there was $40,000 included in the 1913 valuation which was added on top of and in addition to the tangible property, and in the total for 1913 is included said sum of going value, from which the master made his deductions of added value in getting his valuation for 1907. He found that the construction account of the company showed additions to the property since 1907 amounting to $210,437, and he increased this amount sufficiently to cover going value and other intangible items and fixed the value of the additions at $240,000 as of January 1, 1913 (that is, the depreciated value), and this when deducted from his depreciated value for the whole plant for January 1, 1913, left his valuation for 1907 which, of course, included an allowance for going value up to that year.

Aside from the question whether a separate item of going value should be included, and, for the present discussion, leaving the valuation at the figures fixed by the master, we call attention to the fact that the master included in the 1907 operating expenses an item of $4,466 to cover the occupation tax provided by the occupation tax ordinance which was in force when this suit was begun and which was attacked by the bill in this case. The master allowed this in spite of the fact that no such occupation tax had ever been paid by complainant and in spite of the fact that complainant was resisting payment, not only by its attack in this litigation, but was also resisting payment in litigation then pending in the state courts wherein the city was attempting to enforce collection. Judge Morris, before whom the exceptions to the master's report were heard, disagreed with the master as to the validity of the occupation tax ordinance and held that it was void. Since the hearing in the court below, the Nebraska Supreme Court, in a suit wherein the city was attempting to enforce the collection of the occupation tax under said ordinance, held the ordinance void. (See *City of Lincoln* v. *Lincoln Gas & Electric Light Co.*, 100 Neb. 182).

There is, therefore, no longer any basis for contending that complainant has the right to have included in its operating expenses for 1907 said sum or any other sum to cover the occupation tax. Eliminating this one item from the operating expenses for 1907, allowed by the master, the net income for that year on the master's figures would be $26,815, or a little over 6.1 per cent on the master's valuation for that year.

We shall, in a later portion of this brief, point out many substantial items included in the operating expenses by the master which should have been excluded. The master admits in his report that many of these items were not proper

but he states that he did not find it necessary to eliminate them since his finding sustained the rate without such elimination. (See pages 50-51 and last half pafe 53 and top page 54, printed record.)

The master made no detailed calculations as to the rate of return for the intervening years between 1907 and 1912, but, with reference to these years he says, on page 53 of the printed record:

> "I do not go into the accounts for the years between 1907 and 1912 as the calculations made by Mr. Lea show beyond question that the net income was for each of these years from 50 per cent to 100 per cent greater than in 1907."

**4. Burden of Proof on Complainant.**

In the case of *Wilcox* v. *Consolidated Gas Co.*, 212 U. S. 19, 53 L. Ed. 382, the attitude of this court in such cases was clearly defined. The third section of the syllabus states the rule thus:

> "The case must be a clear one before the courts should be asked to interfere by injunction, with state legislation regulating gas rates, in advance of any actual experience of the practical result of such rates"

On page 51, in the body of the opinion, Mr. Justice Peckham, speaking for the court, said:

> "Of course there is always a point below which a rate could not be reduced and at the same time permit the proper return on the value of the property; but it is equally true that a reduction in rates will not always reduce the net earnings, but, on the contrary, may increase them. The question of how much an increased consumption under a less rate will increase the earnings of complainant, if at all, at a cost not proportioned to the former cost, can be answered only by a practical test. In such a case as this, where the other data upon which the computation of the rate of

> return must be based, are, from the evidence, so uncertain, and where the margin between possible confiscation and valid regulation is so narrow, we cannot say there is no fair or just doubt about the truth of the allegation that the rates are insufficient."

And in the case of *Knoxville* v. *Knoxville Water Co.*, 212 U. S. 1, 53 L. Ed. 371, the same question was gone into and many statements in the opinion make it plain that where it is sought by injunction to suspend the enforcement of a rate in advance of an actual trial of its effect, the court will decline to interfere unless the showing is sufficiently strong to put the confiscatory character of the rate beyond any just and fair doubt. In the course of the opinion, Mr. Justice Moody, on page 16, said:

> "The jurisdiction which is invoked here ought, as has been said, to be exercised only in the clearest cases. If a company of this kind chooses to decline to observe an ordinance of this nature and prefers rather to go into court with the claim that the ordinance is unconstitutional, it must be prepared to show to the satisfaction of the court that the ordinance would necessarily be so confiscatory in its effect as to violate the constitution of the United States. In *Ex parte Young*, 209 U. S. 123, 52 L. Ed. 714, the last word of caution by this court was said (p. 166): 'Finally it is objected that the necessary result of upholding this suit in the circuit court will be to draw to the lower federal courts a great flood of litigation of this character, where one federal judge would have it in his power to enjoin proceedings by state officials to enforce the legislative acts of the state either by civil or criminal action. To this it may be answered, in the first place, that no injunction ought to be granted unless in a case reasonably free from doubt. We think such rule is and will be followed by all the judges of the federal courts.'"

And on the same page, the following from the opinion in *San Diego Land & T. Co.* v. *National City*, 174 U. S. 739, 43 L. Ed. 1154, was quoted with approval:

> "Judicial interference should never occur unless the case presents, clearly and beyond all doubt, such a flagrant attack upon the rights of property under the guise of regulations as to compel the court to say that the rate prescribed will necessarily have the effect to deny just compensation for private property taken for the public use."

And again on page 17 of the same opinion the writer repeated with approval the following expression of the court in the case of *San Diego L. & T. Co.* v. *Jasper*, 189 U. S. 439, 47 L. Ed. 892:

> "In a case like this we do not feel bound to re-examine and weigh all the evidence, although we have done so, or to proceed according to our independent opinion as to what were proper rates. It is enough if we cannot say that it was impossible for a fair-minded board to come to the result which was reached."

And again, on page 17, the court sums up the whole matter in this manner:

> "We do not feel called upon to determine whether a demonstrated reduction of income to that point (4 per cent) would or would not amount to confiscation. Where the case rests, as it does here, not upon observation of the actual operation under the ordinance, but upon speculations as to its effect based upon the operations of a prior fiscal year, we will not guess whether the substantial return certain to be earned would lack something of the return, which would save the effect of the ordinance from confiscation. It is enough that the whole case leaves us in grave doubt."

In other words, it is the settled policy of this court to discourage, as far as possible, the practice on the part of public service corporations of rushing into the courts, and attempting to suspend rate regulation without first giving the rate a practical test, thereby eliminating speculation and prophecy based upon opinion evidence, and substituting

facts gleaned from actual trial and experience, and to refuse to interfere by injunction, except in those cases where there is no just or fair doubt of the confiscatory character of the rate complained of.

### 5. Real Estate Valuation.

The master not only valued the real estate of the complainant at a much higher figure than we think was justified by the evidence, but he included several tracts which are neither used nor useful in the gas business of complainant.

We contend that the block on which the gas manufacturing plant is located is the only real estate which is either used or useful in the operation of this plant for the Lincoln service. This is block 79 in the Original City of Lincoln, and contains twelve lots. There are some lots in other blocks near the plant which the company has included in its inventory, but which are not used by the company in connection with the gas business. The lots in Peck's Grove are partly used for the East Lincoln holder, and part of them are not used at all by the Gas Company, but are rented for residence purposes. Of course, it goes without saying that the lots which are not used at all, but are being rented, cannot be included in this valuation. As to the Peck's Grove lots whereon the East Lincoln holder is located, there is a controversy between the city and the company as to whether this East Lincoln holder forms a necessary part of the Lincoln service. The East Lincoln holder is located on lots from 6 to 15, inclusive, in block 2, Peck's Grove, and these lots cost the Company, at the time it erected the East Lincoln holder, $1,000 (B. C. Adams, p. 626, printed record). The lots have not increased in value since that time, but, as a matter of fact, there has been a slump in the value of real estate in that vicinity. One thousand dollars

would, therefore, be a fair valuation for the six lots upon which the East Lincoln holder is located, in case the court should find that this property, or any part of it, should be included. All of the other Peck's Grove lots were purchased to satisfy objecting owners in that location, as the evidence cited will show, and are not used in the gas business, and they should not be inventoried as a part of the property upon which rates are to be paid.

The remainder of the real estate is disconnected from any part of the plant or property used in any way in connection with the manufacture or distribution of gas. This disconnected property is rented to tenants. There is no present nor contemplated use for any of it. Such real estate was excluded in *Cedar Rapids Gas Light Co.* v. *Cedar Rapids*, 144 Ia. 426, 120 N. W. 966, 138 A. S. R. 299, which was affirmed by this court in 223 U. S. 655, 56 L. Ed. 549. See also: *Petee* v. *Brooklyn & C. B. Light & W. Co. Pub. Utility Rep.* 1915A, p. 46, decided by Maryland public service commission, January 15, 1915, where it is said:

> "Suffice it to say that we think the sum of $150,000, upon whic hthis estimate of a proper return is based, is too high, especially when we consider that in the construction of its plant in Brooklyn, the respondent provided a plant sufficiently large not only to take care of the present prospective customers in that territory, but also all customers that might be added by the future development and provement of the property in and around Brooklyn for a number of years to come. In doing this, the apparatus at its pumping station was materially enlarged and its mains were run through certain sections in Brooklyn where the property is unimproved, but which the defendant hoped would be improved in the future. This additional outlay the defendant preferred to make, and perhaps wisely so, rather than increase the capacity of the plant as new demands were made upon it; but certainly the present users cannot be expected to pay a rate sufficiently high to yield a fair return on the money invested in excess of the

amount necessary to properly provide for the present consumption. If the company elects to make this outlay now, rather than wait until there is a demand for it, then the company, and not the users, should stand the interest on this amount."

See also:

*Southern Pac. Co.* v. *Bartine*, 170 Fed. 725, (767).

*Long Brach Commission* v. *Tintern Manor Water Co.*, 70 N. J. Eq. 71, 62 Atl. 474.

*Ely* v. *Ely Light & Power Co.*, 3d Am. Rep. Nev. P. S. C. 295, (298).

*San Diego L. & T. Co.* v. *Jasper*, 189 U. S. 439, 47 L. Ed. 892.

If we eliminate the unused real estate and include only the lots in block 79 where the plant is located, and the Peck's Grove lots where the East Lincoln holder is located, (notwithstanding this holder is primarily for the suburban service) and give to this real estate actually used the value assigned to it by the Company's witnesses, we get the value as follows:

| | |
|---|---|
| 12 lots in block 79 | $11,000 |
| Lots 6 to 15, block 2, Peck's Grove, $300 per lot | 3,000 |
| | $14,000 |
| Deduct 27% for electric department | 3,780 |
| Value of real estate actually used by the gas department | $10,220 |

In justification of the apportionment to the electric department of 27 per cent, we call attention to the fact that the master found that the electric consumers were 27 per cent of the total number of consumers of both departments (bottom p. 51 and p. 52, P. R.). Attention is also called to the fact that at the former trial of this case the complainant apportioned the real estate at the works on the basis of two-thirds to the gas department and one-third to the electric department.

### 6. Valuation of Buildings.

The reproduction costs fixed by the master for a number of the buildings are the same as those fixed by the Company's principal expert witness. The reproduction costs found by him for the remainder of the buildings are almost an exact average of the reproduction costs fixed by the witness for both sides. Mr. Assenmacher, the only practical contractor who testified at the last trial, and who was the only witness in a position to give strictly reliable information as to what these buildings could be built for today, fixed the reproduction cost in every instance far below that fixed by the master. The tendency of the master was to give complainant the benefit of the doubt and to follow or approximate the values fixed by the Company's experts.

Complainant complains of the master's method of depreciation. He applied what is known as the straight line method, insofar as he depended upon arbitrary hypothesis (see p. 44, printed record), but it must not be understood that he applied said method in its full force. He assumed that a large part of depreciation was taken care of by current repairs and renewals and took this into account in applying depreciation as well as in his allowance for future depreciation. On this subject he says on page 53 of the printed record, beginning with line 14:

> "The property has been depreciated on the assumption —warranted I think by the proofs—that it has been kept in good order and efficient, not only by current repairs, but by renewals as well."

To show how far the master fell short of applying full straight line depreciation we here analyze his figures:

#### PURIFYING HOUSE.

The master found the reproduction cost of the purifying house to be $16,700, and its present value $13,200. Hence the amount of his depreciation was $3,500. The assumed life of

this building, according to Mr. Lea, (complainant's expert), was fifty years, and its age twenty-two years. The depreciation, according to the straight line method would be 44 per cent, whereas the master's depreciation is but 21 per cent of the new cost.

GENERATOR HOUSE.

The master found the reproduction cost of this building to be $4,000, and its present depreciated value $3,800. In other words, it has depreciated, according to the master's findings, $200, or five per cent. If we take the assumed life, fifty years, assigned by Mr. Lea, the Company's expert, and the age, five years, agreed to by the experts of both parties, it will be seen that this building had lived one-tenth of its assumed life, and had therefore depreciated $400, or ten per cent of its new cost, according to the straight line method.

RETORT HOUSE.

The master found the reproduction cost of this building to be $7,500, and its present depreciated value $6,375. Accordingly he found the building had depreciated $1,125. It is agreed that the building was 22 years old. Mr. Lea assigned an assumed life of fifty years, and on this assumption the building had depreciated 44 per cent, which would be $3,300, instead of $1,125, found by the master. The percentage of depreciation found by the master was 15 per cent, or about one-third of what it would be on the basis of Mr. Lea's assumed life.

METER SHOP AND BOOSTER HOUSE.

The master found the reproduction cost $2,850, and present value $2,660. The depreciation would therefore be $190, or 6.6 per cent. On Mr. Lea's assumed life and age the depreciation on the straight line method would be 10 per cent, or $285.

COAL SHED.

The master found the reproduction cost to be $2,000, and present value $520. The depreciation would therefore be $1,560, or 75 per cent of the new cost. According to the assumed life and age by Mr. Lea, the depreciation would be 88 per cent instead of 75 per cent on the straight line method.

We therefore contend that since the reproduction costs placed by the master upon these buildings were much higher than what they should have been, according to the evidence produced by the city, the Company has no reasonable basis for complaint of the master's findings as to these reproduction costs. If the present value of the buildings is to be arrived at by applying the straight line method of depreciation to the new or reproduction cost, then the master's findings of present value as to all of these buildings are much higher than they should be, and, since this is the result, not of a failure of the master to make proper findings from the evidence, but a failure to apply in its full force a correct engineering or legal principle to the matter of depreciation, we feel at liberty to urge, without at all conflicting with our contention as to the weight to be given to the masters' findings of fact, that assuming the reproduction costs found by the master to be correct, his present values should be scaled down to a considerable extent. We therefore revise the master's figures as to the present value of these buildings, and in order to remove any opportunity for discussion as to the assumed life and ages we have taken those assigned by Mr. Lea, the Company's expert, and have applied the straight line method of depreciation to the master's reproduction costs, with the following results:

| Bldgs. | Lea's Assumed Life | Lea's Ages | Master's Reproduction Cost | Master's per cent Depreciation | Correct per cent Straight Line Depreciation | Master's Present Value | Correct Present Value Under Straight Line Depreciation |
|---|---|---|---|---|---|---|---|
| Purifying House | 50 | 22 | $16,700 | 21 | 44 | $13,200 | $9,352 |
| Generator House | 50 | 5 | 4,000 | 5 | 10 | 3,800 | 3,600 |
| Retort House | 50 | 22 | 7,500 | 15 | 44 | 6,375 | 4,200 |
| Meter Shop. | | | | | | | |
| Booster House | 50 | 5 | 2,850 | 6.6 | 10 | 2,660 | 2,565 |
| Coal Shed | 25 | 22 | 2,080 | 75 | 88 | 520 | 150 |
| Oil Tank House | 50 | 15 | 1,807 | 17 | 30 | 1,500 | 1,265 |
| Oxide Shed | 20 | 3 | 70 | 10 | 15 | 63 | 59 |
| Stable and Blacksmith Shop | 25 | 15 | 949 | 48 | 60 | 493 | 379 |
| District Holder Booster House | 40 | 3 | 811 | 5.5 | 7.5 | 770 | 751 |
| | | | | Total | | $29,381 | $22,321 |

To enable the court to compare the reproduction costs of the buildings as found by the master with the reproduction costs of the several expert witness of both parties at both trials of this case we give below the figures of the several witnesses and those of the master for the entire group of buildings:

(a) REPRODUCTION COSTS OF THE COMPANY'S BUILDINGS AS OF JANUARY 1, 1907.

Malone, for complainant ..... $37,288
Lea, for complainant ..... 33,034
Jansen, for the city ..... 24,643
Adams, for the city ..... 22,247

The master made no separate valuation of the buildings for 1907. Mr. Lea, the principal expert for complainant, made no separate valuation for 1907, but, by deducting from his 1913 valuation the additions he claims were made since 1907, we get his 1907 reproduction cost as above stated.

(b) REPRODUCTION COSTS OF BUILDINGS AS OF JANUARY 1, 1913.

Lea, for complainant ..... $41,312
Assenmacher, for the city ..... 29,007
Adams, for the city ..... 28,135
The master's reproduction cost ..... 36,767

As we have said the figures given in both of the above tabulations are the reproduction costs before taking off depreciation. The difference between the reproduction cost of the Company's buildings as fixed by Mr. Lea, the Company's chief expert, and the figures of the master for reproduction cost is $4,545, and if the master had given full force to the usual straight line method of depreciation, the difference in the present or depreciated values of the two would have been much greater than the difference in their reproduction values, whereas, by the assumption indulged in, and rightly too, that much of the depreciation had been taken care of by repairs and renewals, the master's depreciated value of the buildings is but $1,586 below the depreciated value claimed by complainant.

### 7. Valuation of Work Equipment.

AS OF JANUARY 1, 1913

The Company's expert, Henry I. Lea, fixed the reproduction cost of the works equipment at $253,298, and its present or depreciated value at $196,759. Alton D. Adams, the city's expert, fixed the reproduction cost at $171,273 and its present value at $133,298, which includes in both instances 7 per cent for engineering, etc. The master fixed the reproduction cost at $198,868 and its present value at $179,310.

It will be seen that the master's reproduction cost for works equipment as of the above date was $27,595 more than the valuation placed upon it by Alton D. Adams whose valuation was largely based upon actual prices paid, and costs incurred by the Company, and upon recent prices involved in contracts for such equipment in other plants. We will not trouble the court with a tedious discussion of the expert testimony relative to this or any other part of the physical equipment. Any one who cares to read the testimony of Henry I. Lea, the complainant's chief expert, will see that he paid absolutely no attention

to what this Company had paid fr any of its equipment. Time and again in his testimony he disclaimed any knowledge of what the actual cost was, and that he did not even investigate the books of the company for actual costs, and did not care what they were. He claimed to base his valuation upon his large experience in installing and valuing such property elsewhere, yet he refused to give actual cost of other properties urging, as his reason, that it would be betraying secrets of his clients and would be unprofessional.

On the other hand, the city's expert, Alton D. Adams, in almost every instance based his valuation upon actual cost of similar equipment elsewhere, or the actual price paid by this Company for the equipment being valued. In spite of Mr. Lea's contempt for actual costs, courts recognize such costs as being among the most reliable means of arriving at present value. In the Kansas City Water Works case, 62 Fed. 853, Mr. Justice Brewer said:

> "The original cost of the works is not accurately and satisfactorily shown. If it would have assisted us in reaching a conclusion—if, in consequence of our ignorance thereof, we have not placed the value upon this property which it deserves—the company is alone to blame, for by the production of its books it could have clearly shown the actual cost of every part and of the whole of its property."

An instance quite clearly showing the difference in methods of these two experts is the matter of valuing the two tar tanks. Mr. Lea estimates the steel alone in the two tanks to cost $1,149 (subdivision "I," Exhibit "7," p. 1330, printed record).

Mr. Adams, however, estimates that the steel part of each tank would cost $393, or $786 for the two (pp. 897-8, printed record). They differ a little on their price per pound for the steel, but the difference is largely in the number of pounds.

Mr. Lea takes the tanks just as he finds them, and estimates the pounds of steel they contain. Mr. Adams finds that they were not constructed as tar tanks at all but were two old steam boilers constructed of heavy steel sufficient to resist steam pressure, and that they are much heavier than tar tanks constructed as such. He therefore estimates the quantity of steel in two tar tanks constructed as such with equal capacity, and values these tanks at what two such tar tanks would cost.

In his treatment of these out-of-date purifying boxes, Mr. Adams was sustained by high judicial authority. Dealing with a similar question the Supreme Court of Iowa in *Cedar Rapids G. L. Co.* v. *Cedar Rapids*, 138 A. S. R. 299, (308), said:

> "In ascertaining values in this way, the worth of a new plant of equal capacity, efficiency and durability, with proper discounts for defects in the old, and depreciation for use should be the measure of value rather than the cost of exact duplication."

Would these old boilers be worth any more to a purchaser to be used as tar tanks than what two tar tanks of equal capacity could be constructed for? We call attention to the fact that Mr. Lea figures the steel at 4.5 cents per pound whereas Mr. Adams estimates it at 3.7 cents the actual price paid per pound by the Company in 1909 and 1910 respectively for the two oil tanks which we shall next discuss. This shows the value and importance of getting at actual prices paid by the company in actual experience.

Another instance, to which we direct attention, showing how Mr. Adams corroborates his testimony from the records of the Company, and clearly illustrating the value and importance of doing so, is the case of two oil tanks testified to by Mr. Adams, beginning at page 898, printed record. It will be seen by referring to subdivision "I" of Mr. Lea's Exhibit

"7" (vol. 4, p. 1330) that he values the two steel parts of the two 10- foot 9-inch oil tanks at $1,158. Mr. Adams finds the bills for these tanks showing that they actually cost the Company $335 each, or $670 for the two.

And we here cite the construction account of the Gas Company (p. 1957, vol. 5, line 2) in corroboration of Mr. Adams and to contradict Mr. Lea, as to the cost of these tanks and as to the cost of their complete erection.

AN INTERESTING COMPARISON AS TO TWO STEEL OIL TANKS.

| | Lea (7-I-55) | Adams (Ex. 235) | Const. a/c of Co. | Lea's excess over Const. a/c. |
|---|---|---|---|---|
| Cost of two tanks ..... | $1,158.00 | $ 670.00 | $ 630.00 | $ 528.00 |
| Cost of erection ..... | $ 697.00 | $ 490.00 | $ 559.32 | $ 137.68 |
| Complete cost. | $1,855.00 | $1,160.00 | $1,189.32 | $ 665.68 |

Now what confidence can be placed in a valuation by an expert who is so totally at variance with actual costs as to be guilty of such ridiculous overstatement? And what shall we say of a company which will permit such an estimate to be made and sworn to and placed in evidence with the purpose of having it accepted by the court, when their own records show the cost of every item entering into the construction of these tanks, and when they knew that their expert had valued them 56 per cent higher than they actually cost? Does this court believe that Mr. Lea did not know what these tanks actually cost? If he did not know why did he not ask? And why did not this company show this construction account to Mr. Lea? When he had produced such a monstrous over valuation of these tanks why did they not produce this record and ask him if he did not wish to cut it down so as to bear some reasonable relation to actual cost?

This was not a mere oversight. It was deliberate, and whatever excuse Mr. Lea may offer, this Company can not excuse itself for so attempting to impose upon the court.

It will be noticed from reading the above cited testimony that Mr. Lea is not to be relied upon in any of his valuations. These two tanks were purchased November 22, 1910, since the first trial, yet the Company, well knowing what they actually cost, also the actual weight, permitted Mr. Lea to turn in a valuation practically double the amount actually paid for these items of equipment, and greatly overestimating the weight.

The fact that this company would permit such a gross exaggeration of the actual weight and value of these tanks when they could just as well have produced the actual vouchers and construction account for so recent a purchase indicates that it is willing to mislead the court as to the cost and value of any and all of its property, and makes it highly important that we should scrutinize its showing, not only as to its property, but also as to its operating expenses.

### 8. Valuation of Distribution System.

By far the largest single item of physical property belonging to complainant's gas plant, is the distribution system. This is practically all under ground and cannot be seen and, therefore, an excellent opportunity is afforded for controversy as to its age, the weight of the pipes, and its present condition. A slight mistake as to the age would result in an erroneous conclusion as to depreciation. A slight increase, or decrease, in the weight of the pipe, or in its cost, would result in a very substantial error as to its value. It was, therefore, important to determine, as nearly as possible, the actual age of each piece of construction in the distribution system; the actual weight of the pipe per foot, and, as nearly

as possible, the actual original cost of the material and labor entering into its construction as well as the actual present cost of reproduction. It goes without saying that any public service company properly conducted not only could, but would, have records of its construction showing the actual facts as to all these items. It is claimed by complainant that in the early history of this corporation no accurate record was kept and that there is none in existence from which an accurate history of these matters can now be obtained. It is to be remembered, however, that the original plant and original distribution system which were constructed back in those "dark ages" of this enterprise, are no longer in existence and are not a part of the property with which we are now dealing. The original distribution system consisted of wooden mains and these have long ago passed out of existense, and the original plant at which the gas was manufactured was long ago abandoned and the present gas works are in an entirely different location and, so far as we have been able to discover, no part of the original plant or distribution system is now in existence. For the period of time during which the present property has been developed this company has kept fairly accurate records and could, if it would, produce the actual cost of practically every piece of property now owned by it. Instead of furnishing to the master at the hearing in this case the actual cost of its property and the actual ages of a very large portion of it, and the actual weight of the cast iron pipes forming the most valuable part of its distribution system and the actual cost of its buildings and machinery, it has seen fit to take the position that the actual figures could not be procured and furnished and it has rested its entire case upon the testimony of experts who dealt with theories and speculated as to the value of this property, its age and in the distribution system not only the age of the different pieces of construction but the actual weights and cost of the pipe were left almost

entirely to speculation. Mr. Alton D. Adams, the expert for the city, spent a great deal of time searching through the records of the company and through its vaults and through boxes and piles of papers in its basement endeavoring to get the actual history of all of these matters. Concerning the work done by him, as well as the difficulties encountered in endeavoring to get at the actual facts relative to these matters, we quote the following from his testimony, beginning on page 840, volume 3 of the printed record:

> "As to what benefits, if any, have been derived from the reports filed with the Massachusetts Gas Commission in ascertaining the life of property and apparatus used in the manufacture of gas, that is one of the particularly valuable features, to my mind, of the Massachusetts (reports), because the form of the reports, is sufficiently complete so that engineers familiar with the gas business can read those reports and can go about and look at the properties and recognize the properties from the reports and trace the properties down through now more than a quarter of a century of life and see what the changes have been and thereby is created a record as to depreciation that is unexcelled. I have been doing that a great deal for the last ten years and made a great many records from it.
>
> "I have repeatedly examined the property of the Lincoln Gas & Electric Light Company with a view of making a valuation of it. As to what examination of the company's property, records and books I have made and the time I have put in on it,—I began to attend in Lincoln in the latter part of last year, have now forgotten the date * * * and have been here in the city of Linocln, apart from some work that I did away from the city,—have been here certainly more than two months, perhaps as much as three, right here in the city. I have during that time repeatedly visited the gas works, can't say how many visits I have made, but enough to familiarize myself at least in a general way with the plant. Have spent a large portion of the time that I have been in Lincoln in an investigation of the records in the office of the gas company as to its plant, property and operations. Have spent a good deal of time in an effort to acquire a knowledge of the property of the

gas company apart from the works, that is the property scattered over the city of Lincoln under the streets. And I may mention, as I understand the testimony of the company's engineers, the greater part, substantially more than half, of the visible property of the gas company is spread over the city of Lincoln and is not down at the works at all. I am quite sure the valuation made by Mr. Lea shows over 60 per cent of the physical value to be in what is termed the distribution system, to a great extent is covered up and buried in the ground, and isn't readily open to inspection like buildings and machinery at the plant. I have given a great deal of consideration in an effort to arrive at a just and fair cost of what that property really is for a basis of valuation. Then of course the vouchers of the company which run back to 1901, not back of that so far as I find, have been through all of those years of vouchers and have made copious extracts from the bills since 1901 rendered to the company by various concerns from which it bought equipment. As to whether I caused any examination to be made prior to the year 1901, I would say that it is impossible to do that. I made an extended search in the vaults and out of the way places for all of the vouchers you could find. We had a good deal of difficulty in finding these bills, not that I mean the company made any difficulty for us, but the bills were not filed in any regular way or place and we failed to find a large part of them. Some were in the vault down in the basement nailed up in some old wooden boxes, entirely unassorted, and they had to be arranged and gone over before we could find what was in them. I can hardly dignify the assistance I have had from the company as to those vouchers by the name of a search. I don't mean to say that the company has put any impediment in our way. I asked for all of them and they said all are in this miscellaneous pile; there was a vault down stairs and they said everything is down here now, help yourself; we helped ourselves and the company as to some special vouchers have repeatedly given me some assistance where I wanted a particular bill and in several instances found the bill I wanted, in one or two instances because some officer of the company had it. In general the policy of the company was to say our records were in such and such a place, go there see what you can find, and help yourself. I did considerable searching for and question-

ing about these contracts entered into the past year for various parts of its gas equipment. Those contracts have only in part been discovered. I understand from the testimony of the company that they have all been turned over to me that have been available; a good many contracts have disappeared. Then the regular books of accounts, such as ledgers, journals, and cash books and some others have all been looked into with a good deal of care for the records of the structural cost of the property here. Of course those books are run under the name of the different one or two corporations that have preceded the present corporation, but the books are in the office of the company back to 1872 or 1873, when the construction of this plant was carried out.

"Then the company has certain records as to the construction of its mains. I have made a considerable number of extracts of these and the process of investigating main work orders so-called, which are orders to the foreman to lay specific pieces of gas mains in specific places. These are still under investigation. The company has a very considerable file, I think nearly 700 of these work orders, which are on file in bound volumes and reveal a good deal of the facts relative to that part of the construction of the company's property. They are the best evidence, as far as they go of its mains, but the orders appear only to be given about the year 1905, and run from there down to date. The service cards are another source of information. I think they begin about 1905. The work of investigating these service cards, which are a written record on a little card-board filed away, concerning the construction of the service pipes from the main to the meter of some consumer, and contain a good bit of valuable information as to the size of pipe, its length and various other matters connected with its construction. The company has a few drawings that have been made accessible to me, the files of the company are not very full in that respect; they are a source of information. It has several maps of mains that have appeared in the testimony; those have all been considered by me. Then the company has a special form of record called gas report, being a specific form of record called a gas report, being a specific form of compilation as to its gas plant and particularly as to the operation of its gas plant, as far as I can judge for the purpose of showing the officials of the company, perhaps those absent as well

as those present in Lincoln, what were the operations of the company from year to year. Of course the figures that go into those so-called gas reports are drawn from other records of the operations of the company—the station records, laying of mains, and various other sources. I resorted very considerably to those so-called gas reports which are made out in the first instance month by month and later for the twelve months closed into the year. Those gas reports begin to be pretty complete about the year 1903, and continue down to date. So we have a pretty complete record of the operations of the company beginning with the year 1903 in those gas reports. By operations I mean particularly the making of gas. These gas reports do not disclose in any complete way the construction of the property, for that you have to go to the bills, books and plant itself as it exists down on block 79, and as it exists in the streets of the city of Lincoln. I think that is a fair general statement of the scope of the investigation.

"As to the condition of the company's construction account as it appears on the books and my investigation of it, would say I have been over the construction account of the company, as it appears on the books, very extensively. In fact, I have worked with Mr. Wiggins in the compilation of the account which I understand he has presented here in evidence. The construction account appears in their books from about 1873 down to date."

If the company's gas mains were above ground and could be seen and measured there would be no great difficulty in arriving at their present value, but being under ground and out of sight and their size, weight, age and condition all being important factors in arriving at their value it was the duty of the company to produce the actual facts as to all of these matters. We believe if it had been to the interest of the company to furnish the exact history of its distribution system, the exact cost of its mains, their sizes and weight that these matters would all have been produced and the actual records placed in evidence. If this had been done the court could by making proper allowances for the increase

or decrease in cost of material and labor as compared with the time of construction, have arrived at a fair and just valuation against which neither party could have made any valid complaint. It is inconceivable that a corporation owned to a very large extent by financiers who are non-residents of the city and who are obliged to operate it through persons employed and placed in charge of the property would permit the development and construction of a plant without having exact records kept as to the cost of each item of construction. We believe such records have been kept and could be furnished if the interests of the company in this litigation required that they should be furnished. If they have not been kept it is the fault of the company and not of the public, and if either party is to suffer as the result of this neglect it should be the one guilty of the neglect.

In valuing the distribution system, as well as the other portions of the plant, the master had before him the testimony of Henry I. Lea, the chief expert witness of the company, and of one or two others, all of whom testified theoretically as to the value of most of the items of property. They paid little or no attention to the original cost of the plant and Mr. Lea especially disclaimed any knowledge of what the property cost and frankly admitted that he did not care. The witnesses for the city testified either from actual experience in local construction or from information gained very largely from the records of the company and from actual costs of similar properties recently purchased or constructed. Yet the master, in the main, followed the reproduction figures of Mr. Lea in valuing the distribution system. On page 43 of the printed record will be found his valuation of this portion of the plant and the following extract from his report found on that page shows clearly how he arrived at his figures:

"Mr. Lea's estimate of the net construction cost of mains laid in unpaved streets is $179,814; Mr. Adams' $130,913. I have allowed $173,700. Lea's estimate of the net construction cost of total services is $111,689; Mr. Adams' $69,939. I have allowed $76,116.

"For services and boxes and cocks I have allowed $9,000; for total service governors $18,950; for total meters $60,500; for distribution tools $6,210; for street main drips $1,113; for main valves $328; for district governors $225; for railway crossings $2,800; and for gas appliances loaned $3,250; making a total of $352,192 as the net construction cost of the distribution system. The difference between the total cost, as fixed by me, and the total cost according to Mr. Lea ($529,736) consists for the most part in the elimination from Lea's figures of three items, namely:

"(1) 3½ excess overhead.

"(2) The cost of paving over mains and services, and

"(3) The cost of service pipes paid for by patrons of the company.

"Adding 12½% overhead charge to the net construction cost of $352,192 gives $396,216 as the total reproduction cost of the distribution system; and its depreciated value or present worth I find to be $351,634. That no allowance can be made in a rate case for the reproduction cost of paving over mains and service pipes seems now to be established by the clear weight of judicial and administrative authority."

Since the master found the reproduction cost of the distribution system in harmony with the testimony of complainant's chief expert, complainants can have no reasonable ground for objection to the finding unless the master was in error as to the three items above named, which were responsible for reducing his valuation below that claimed by the company, or, unless he was in error in his method of depreciating the property.

We have referred to the testimony bearing upon the valuation of the distribution system at some length for the purpose

only of calling the attention of the court to the fact that the master resolved the doubt as to reproduction cost mainly in favor of complainant's own contention.

As to the overhead item allowed by the master we beg leave to discuss that subject in a later portion of this brief where we shall discuss overhead expense as applied to all of the property.

As to the cost of paving over mains and services which were laid in dirt streets, we need only cite the recent holding of this court in *Des Moines Gas Company* v. *City of Des Moines,* 238 U. S. 153, 59 L. Ed. 1244, where it was held that the cost of paving over mains which were laid before the street was paved need not be included as a part of the reproduction cost of the property in a rate case.

To the same effect see also *Cedar Rapids Gaslight Company* v. *Cedar Rapids,* 134 Ia. 426; *People* v. *Wilcox,* 104 N. E. (N. Y.) 911.

With reference to cost of service pipes paid for by consumers, which was eliminated by the master, he says on page 44 of the printed record:

> "Of course, in valuing a utility, no distinction can be made between property acquired by purchase and property acquired by gift or otherwise. The value of whatever the company ownes and devotes to the public service regardless of the means or method of acquisition is a just and proper standard by which to measure reasonable rates. But it cannot, I think, be said, looking at the matter broadly, that the company is the owner either technically or equitably of these service pipes. It bought and put them in, it is true, but when it was reimbursed by its patrons for the cost, can it be supposed that it still intended to retain title and the right to remove them at pleasure? A more reasonable inference is that in every case both parties to the transaction regarded the pipes when paid for as belonging to the owner of the

tenement with the right on his part to use them if so inclined in connection with a service furnished by a rival company or for any other purpose, even though entirely unrelated to the gas business. They cannot, it seems to me, consistently with the principle above stated by Mr. Justice Harlan, constitute in part the basis for a rate that can be regarded as entirely fair to the public. The gas consumers have paid $30,484 of the amount claimed by the company for putting in service pipes and this item I have eliminated from the valuation."

The annual gas reports of the company for the years 1903 to 1912 inclusive show a total collected by the company from gas consumers for the installation of gas services of $33,-789.15. This amount, of course, was included in Mr. Lea's valuation plus 16% for engineering, etc., and this 16% the master was obliged to add to the amount paid for by consumers when he deducted the amount from Mr. Lea's valuation of services in getting the amount which he finally accepted as the value of the distribution system.

In support of the elimination of the amount paid by consumers for new services see *Santiago Water Company* v. *Santiago*, 118 Cal. 556, 62 A. S. R. 261, (275); *Illinois Central* v. *Interstate Commerce Commission*, 206 U. S. 441, 51 L. Ed. 1128.

### 9. Overhead Charges.

Concerning the matter of overhead charges the master said, beginning on page 37 of the printed record:

"In ascertaining the value of the property of a public service corporation it is the recognized and approved practice to add to the fundamental cost of the physical equipment, excepting real estate and working capital, a proper percentage to cover overhead expenses. This percentage represents the difference between the net construction cost and the cost of reproduction new. Just what it should be is the question about which there is much difference of opinion among engineers, courts and

commissions. In this case Mr. Lea puts it at 16% and Mr. Adams at 7%. The matter is not governed by any inflexible rule, but is to be determined in every case by the exercise of good sense and sound discretion. The amount should be sufficient rather than liberal, especially where liberality might result in blotting out legislation which in the regulation of rates is only required to stop short of confiscation. The property was inventoried by Mr. Broadnax, an employe of the company, and a gas engineer of long experience. The work seems to have been done with unusual thoroughness. The only error discovered during the course of the long trial was one of inclusion; there was none of exclusion. My judgment upon the matter is that an allowance of 12% on the total net construction cost of the physical property, excepting real estate and working capital is sufficient to cover all overhead expenses, including engineering, superintendence, legal expenses, taxes, interest during construction, omissions and contingencies, casualty liability and whatever else is usually classified under this caption. This is necessarily an estimate based almost entirely upon expert testimony. No accounts were kept and no books, vouchers or other evidence produced showing with even approximate accuracy what expenditures were actually made and properly chargeable to this account. The value of the property has substantially increased by additions made to it in recent years, but the only means of ascertaining what the overhead charges on account of such additions were is by the use of a more or less reliable hypothesis. Courts and commissions differ widely upon this question; and while it may be that the percentage here allowed is not enough, the evidence does not convince me that it ought to be more."

ENGINEERING, ETC.

Most engineers include in the term overhead cost engineering and supervision, contingencies, contractors' profit, interest during construction, legal expenses, expenses of organizing the company, taxes and insurance, and expense of promotion, and some also include working capital and going value (see *Whitten Valuation of Public Service Corporation*, Sec.240). Mr. Lea, however, has taken a part of what is

usually classified with overhead charges, and has made a separate item of it, which he denominates "Organization and Legal Expense," in which he includes preliminary investigation, preparation of articles of incorporation, making and certifying abstracts, drawing and examining contracts, general retainer fee, salaries of manager and clerical force for two years during construction, incidental and traveling expense for two years during construction, rent and stationery for two years during construction, aggregating $33,000 (see subdivision "A," Exhibit "7," p. 1300, printed record). He has also separately stated his working capital and going value. We are therefore to remember, in comparing Mr. Lea's item of overhead expense with amounts and percentages allowed by courts, commissioners and other engineers for "overhead cost," that Mr. Lea has separated the items ordinarily included in overhead expense into at least two divisions: one, "organization and legal expense," and the other, "engineering, etc.," the last being set out in subdivision "C" of his Exhibit "7" (p. 1301, printed record) and itemized by him as follows:

| | |
|---|---|
| Engineering and supervision | 6% |
| Casualty liability | 2% |
| Taxes and loss of interest during construction | 4% |
| Omissions and contingencies | 4% |
| | 16% |

Neither are the intangible elements of working capital and going value included under this head. He adds this 16 per cent to his "net construction cost" of all physical equipment except real estate and items going into working capital. Alton Adams allows 7 per cent for "engineering, interest, taxes and general," which, for 1907, amounts to $23,740 (Exhibit "180," p. 1397, printed record), and, as of January 1, 1913, amounts to $36,084 (see Exhibit "231," p. 1443, printed record, also p. 945, prited record). It is to be remembered,

however, that Mr. Adams, in his figures for reproduction cost of all physical equipment, says that he has made them high enough to include such items as contractors' profit, contingencies and omissions, and liability insurance. In other words, his estimates are based upon actual prices and contracts for construction, and installation of equipment,—that is, prices at which contractors are willing to install, and do install, and construct, the several parts of a gas plant,—and they necessarily involve and include contractors' profit, and all of the hazards incurred by a contractor on account of omissions and contingencies, and for such liability insurance as the contractor sees fit to carry.

This matter of overhead cost, like all other intangible elements included by engineers in appraising public service plants, is one that has been greatly overworked. There being no exact criterion, aside from the actual expense incurred by the company for the items involved (and these are seldom produced), it is very easy for engineers to expand and enlarge this item to such proportions as to make it practically impossible to sustain any rate established by a rate-making body. That this is the case is coming to be recognized by courts and engineers. They are coming to recognize that the customary percentages allowed by valuators for this item of "overhead expense" bears no just relation to the actual expense incurred where such actual expense can be discovered. In this connection we quote the following from *Foster on Engineering Valuation of Public Utilities and Factories*, pp. 20-21:

> "It is a question in the writer's mind if engineers are not carrying overhead charges to extremes, for in many cases of actual charges to properties constructed, when strict account has been kept, the total of items that may have bee considered chargeable to this account is very much less than the percentage frequently used. A study of the cost of street railways as shown

in the Reports of the Massachusetts Railroad Commission will aid very much in determining the true percentage to charge. These items are all examined by the commissioners before being allowed as overhead charges, and in the great majority of cases are charged against the railway division of accounts, no charges of any similar nature appearing against any other division. The sum of all the items that could be counted as overhead charges in the twenty-five million dollars for the equipment of the New York subway amounted to less than six per cent. This included interest during construction, insurance, engineering, taxes and all contingencies. It is time for engineers to bring forward actual figures for these items, actual expenditures for overhead charges, for at present they seem to be far too high—even those offered by the most experienced engineers. As a matter of fact, it is found that in very few new projects are accounts so kept as to reveal the overhead charges."

The following quotation from section 240, *Whitten, Valuation of Public Service Corporations*, recognizes the same tendency:

"In most cases a company should be able to substantiate its claims for overhead allowances by actual vouchers and other records of such expenses incurred in the construction of the plant. There is no necessity for leaving this matter entirely to expert opinions as to such costs, based on somewhat hypothetical conditions of assumed reconstruction."

In section 245, *Whitten on Valuation of Public Service Corporations*, reference is made to the case of *Columbus Railway & Light Company* v. *City of Columbus*, where the master's report recommended a total allowance of 9.8 per cent for total overhead charges.

At the former trial of the instant case, Judge Munger allowed a total overhead charge of 7.7 per cent, which included $3,000 (six-tenths of one per cent) for cost of organizing the company, which we claim is not a legitimate item. If this last mentioned item is eliminated, the allowance by

Judge Munger at the former trial for overhead charges would be 7.1 per cent, which substantially agrees with the allowance made by Mr. Adams.

Halbert P. Gillette, consulting engineer to the Washington Railroad Commission, made an appraisal of the railroads of that state in 1908. He went to the books and records of the several companies and got the original items entering into the overhead expense. And the sum total of all the overhead items and the percentages for each of the roads, and the various items icluded are set out in a table, on page 21 of *Foster on Engineering Valuation of Public Utilities and Factories*, as follows:

OVERHEAD CHARGES AS DETERMINED FROM THE BOOKS AND ACCOUNTS OF ORIGINAL COST OF THE RAILROADS IN THE STATE OF WASHINGTON BY H. P. GILLETTE.

| ITEMS | Gt. N. 767.75 Miles Per Cent | Gt. N. 488 Miles Per Cent | W. & Gt. N. 83.9 Miles Per Cent | F. & S. Ry. 132.3 Miles Per Cent | S. & N. Ry. 131.5 Miles Per Cent | N. P. R. R. 1645 Miles Per Cent | C. R. & N. 501 Miles Per Cent |
|---|---|---|---|---|---|---|---|
| Engineering | 2.50 | 3.23 | 4.40 | 3.56 | 3.50 | 5.51 | 2.83 |
| Gen. expense | .28 | .26 | .08 | | 1.00 | 1.22 | .48 |
| Legal expense | | | | 3.55 | | .01 | .02 |
| Insurance | | | .01 | .06 | | | |
| Int. on advances | .93 | 1.23 | 3.25 | | | | |
| Bond interest during construction | 2.44 | 3.84 | | | 5.25 | 13.60 | 2.61 |
| Bond expense | .10 | .18 | | | | | |
| Taxes | .02 | | .17 | | | | .05 |
| Undistributed acct. | | | | | | .91 | 2.64 |
| Total percentage | 6.27 | 8.74 | 7.91 | 7.17 | 9.75 | 21.25 | 8.63 |

Reference is made to the valuation of the Washington railroads in section 258 of *Whitten on Valuation of Public Service Corporations*, in which he says the appraisal of the railroads allowed 6.9 per cent for overhead charges. With reference to the practice of the Wisconsin Railroad Commission, relative to this matter of overhead charges, *Whitten on Valuation of Public Service Corporations*, section 262, says:

"In valuations made by the Wisconsin Railroad Commission for rate regulation or for municipal purchase, the general rule as to water, gas and electric plants has been to allow 12 per cent on the total inventory—reproduction—cost to cover engineering, superintendence, legal expenses, interest during construction and contingencies. The 12 per cent allowed is not usually segregated between the above items, but in certain cases the Commission has said that the 12 per cent allowance was made up of 5 per cent for engineering and superintendence, 4 per cent for interest during construction, and 3 per cent for legal expenses, organization, casualties, commissions, etc. In a few cases the total overhead charge has been 10 per cent, but 12 per cent seems now to be the general rule. In certain cases the companies have contended strongly for a higher percentage, but the Commission has rejected the demand."

The books of this Company do not disclose any actual payments for any of these overhead costs. Of the enormous sum which the Company claims has been added to this plant, since 1907, not one dollar is shown to have been paid, either by the Company's books or by the testimony of its witnesses, for engineering, supervision, casualty insurance, or any other item covered by Mr. Lea's 16 per cent allowance. The fact is that no such items were paid, but that the figures representing any piece of construction or equipment include all of these imaginary and intangible elements.

ORGANIZATION AND LEGAL EXPENSE.

At the former trial of this case, the Company's expert witness, Mr. M. E. Malone, claimed that a reasonable allowance for this item would be $24,950 (see printed record, p. 119).

The Company's expert witness, H. I. Lea, at the present trial, estimated this item at $33,000 (see Exhibit "7"3. The items going to make up this sum are set out in subdivision "A" of Exhibit "7," as follows:

| | |
|---|---|
| Preliminary investigation | $ 3,000.00 |
| Preparing articles of incorporation, making and certifying abstracts, drawing and examining contracts, and general retaining fee | 7,500.00 |
| Salaries of manager and clerical force during construction (two years) | 18,000.00 |
| Incidental and traveling expenses (two years) | 2,500.00 |
| Rent and stationery (two years) | 2,000.00 |
| | $33,000.00 |

The court, at the former hearing, allowed $3,000 for organizing the Company (see p. 24). We contend, however, that this item has no place in a valuation of the Company's property for rate making purposes, as the public is not concerned with who owns or operates the plant, and should not be required to pay a higher rate merely because the service is being furnished by a corporation, than if furnished by an individual. This was the position taken by the supreme court of Iowa in *Cedar Rapids Gas Light Company* v. *Cedar Rapids*, 144 Ia. 426, 120 N. W. 966, 138 A. S. R. 299, where the matter is disposed of thus:

> "Nothing can be allowed for the promotion and organization of the company, for it is immaterial by whom the plant may be owned in estimating its value."

See, also, *Cumberland Telephone & Tel. Co.* v. *City of Louisville*, 187 Fed. 637, where all so-called "overhead charges" are excluded, the reason for such exclusion being stated by Judge Evans as follows:

> "Overhead charges consist of expenses much of which were incurred long ago. Probably those expenses may have added very materially in increasing the present value of the plant. That present value we must ascertain, but it does not follow that 'overhead charges' as a separate item should be included as such. It seems to us that they are too intangible to be available for that purpose."

In *Knoxville* v. *Knoxville Water Co.*, 212 U. S. 1, 53 L. Ed. 371, the lower court had included $10,000, on a total cost of $608,000, to cover "organization, promotion, etc.," and Mr. Justice Moody refused to express an opinion as to the propriety of including this item, but left the question open to be considered when it necessarily arises.

We find no court decision authorizing the inclusion of this item as part of the value of a public service property, at all events no such extravagant sum could be allowed for this item as claimed by the Company. Judge Tibbetts, at the former trial, testified as to the reasonable expense of organizing the Company, including legal services, and fixed it at $500. (P. 246, printed record).

The allowance of $3,000 made by the court at the former hearing was amply large to cover this item, if it is proper to include it. We wish, also, to call attention to the fact that this item, when considered at all, is usually dealt with and treated by engineers as an overhead expense. Mr. Lea, however, for some reason or other, has seen fit to make it a separate item, apart from, and in addition to, his 16 per cent added as overhead expense to his "net construction cost" of all physical property, except real estate and working capital (see Exhibit "7-C," p. 1303, printed record).

The substantial difference between the master's present valuation of complainant's property and that fixed by complainant's principal expert, Henry I. Lea, results as we have pointed out, not from any very radical difference in their respective figures as to reproduction cost, but to the disallowance of certain items, such as paving over mains, and to the application of different theories as to the intangible element. There are, of course, reasonable limitations when it comes to estimating the value of physical property, but when it comes to valuing the intangibles, such as work-

ing capital, overhead charges, and going value, there seems to be no limitation at all. Engineers seem to be disposed to place their figures on such items wherever the emergencies of the case may require. If we include going value and working capital among the intangible elements, (and this, of course, we must do in the case of going value), then the valuation claimed by the company in this case for the intangible elements through its expert, Mr. Lea, is considerably over half of the total net construction cost of the physical property. To illustrate: Mr. Lea's total reconstruction cost is $1,306.075. Of this sum $461,672 represents intangible elements including working capital and going value. He has scattered his intangible items throughout his valuation and subdivided and disguised them in such a way that it is somewhat difficult to discover them. He has cunningly avoided stating the sum allowed in dollars in most instances. It is only by going to the different parts of his report, and especially subdivisions "B" and "D" of his exhibit "7" and by making certain calculations that we are able to ascertain his allowances in dollars. To illustrate:

| | Net Construction Cost | Reproduction Cost |
|---|---|---|
| Real Estate | $ 21,700 | $ 21,700 |
| Buildings | 35,614 | 41,312 |
| Works Equipment | 218,358 | 253,298 |
| Distribtuion System | 568,731 | 659,727 |
| Total | $844,403 | $976,037 |

The difference between the first of the above totals and the second is $131,634, which represents the intangible elements produced by Mr. Lea's 16% allowance for engineering, supervision, etc., in connection with the last three of the above items. This $131,634 nowhere appears in Mr. Lea's report as a separate item, it is simply referred to as a percentage.

The intangible items included by Alton D. Adams and Mr. Lea respectively in their valuations may be set down thus:

| | Per Adams | Per Lea |
|---|---|---|
| Engineering, interest, etc | $36,084 | $131,634 |
| Organization and legal expense | | 33,000 |
| Working capital | 20,239 | 72,038 |
| Going value | | 225,000 |
| Total intangibles | $56,323 | $461,617 |

| | Per Lea |
|---|---|
| Construction and overhead cost | $1,306,075 |
| Deduce intangiblest | 461,672 |
| Leaves net construction cost | $ 844,403 |
| Per cent of intangibles to net construction cost of tangible property | 54.6 |

To illustrate the quantity of intangible value included in the 1913 valuation after taking off depreciation we submit the following table:

PRESENT OR DEPRECIATED VALUE AS OF JANUARY 1, 1913.

| | Adams | Lea |
|---|---|---|
| Engineering, interest, etc | $ 27,198 | $ 107,776 |
| Organization and legal expense | | 33,000 |
| Working capital | 20,239 | 72,038 |
| Going value | | 225,000 |
| Total value intangible items | $ 47,437 | $ 437,814 |
| Value of construction of plant | 388,547 | 695,300 |
| Total | $435,984 | $1,133,114 |
| Per cent of intangible to construction value, (after depreciation) | 12.2 | 62.9 |

To obtain the $695,300 for Mr. Lea's plant construction the value of the buildings, works equipment and distribution system given by Mr. Lea, amounting to $781,376, is divided by 1.16, in order to eliminate his 16% which gives us $673,600. and to this is added Mr. Lea's real estate valuation of $21,700, which gives us the $695,300.

The $107,776 for engineering, etc., is obtained by subtracting the $673,600 from the $781,376 above named. It will be seen that in the total figures for plant construction Mr. Lea has included $437,814 in his depreciated or present value for January 1, 1913, for intangibles.

The manner in which Mr. Lea reaches his remarkable total for overhead cost appears more plainly from the details in the following table, which are taken directly or derived by computation from his, so called, report. These details have been grouped, as nearly as possible, into three classes covering respectively all costs in the nature of engineering and supervision, all general costs incident to construction, and interest and taxes, besides working capital and going value.

Four items mainly in the nature of engineering and supervision, which obviously contain duplicate charges for the same work, are said by Mr. Lea to cost $77,862 or 9.22 per cent of the construction. General items of cost are placed by Mr. Lea at $53,862, or 6.38 per cent of the construction, and he adds another $32,908 for interest and taxes during two years, making a total of $164,632 for engineering, interest and general cost, or 19.49 per cent of construction cost:

ITEMS OF OVERHEAD COST PER MR. LEA.

| Cost Items | Total | Per Cent of $844,403 Construction |
|---|---|---|
| Preliminary investigation | $ 3,000 | |
| Incorporation, drawing, contracts, etc. | 7,500 | |
| Manager and clerical force on construction | 18,000 | |
| Engineering and supervision | 49,362 | |
| Total engineering and supervision | $ 77,862 | 9.22 |
| Rent and stationery | 2,000 | |
| Omissions and contingencies | 32,908 | |
| Casualty liability | 16,454 | |
| Incidental and traveling expenses | 2,500 | |
| Total general cost | $ 53,862 | 6.38 |
| Interest and taxes in two years' construction | $ 32,908 | 3.89 |
| Total engineering, general and interest cost | $164,632 | 19.49 |
| Working capital | 72,038 | 8.53 |
| Going value | 225,000 | 26.64 |
| Total overhead cost | $461,670 | 54.66 |

### 10. Working Capital.

The master allowed $60,000 for working capital, whereas the complainant contends for $72,037.63. The amount allowed by the master is over four times as much as the

amount of necessary working capital ever employed by this company as its records will show. Working capital is, of course, the amount of stock and material on hand, and ready cash currently employed by it in the operation of its business, and which has not yet entered into the physical equipment, or has not been converted into current revenues. Every item of supplies and material on hand and every item of expense incident to operation is necessarily reflected in the operating expenses of the company. If we know what the operating expenses are for a given year we can divide this by 12 and arrive at what the expenses were per month and this will tell us exactly what the company has been compelled to spend from month to month in the operation of its plant, including repairs, supplies, labor, salaries, and current bills and expenses of every kind which must be met by working capital. There is no need of applying fanciful theories nor of indulging in speculation as to what is an adequate working capital for this company. We have its own reports made annually since 1903 in which it sets up its total annual expenses, and these, of course, include everything involved in working capital. It is resolving the doubt in fabor of the company to say that it must have on hand each month sufficient capital lying idle to meet its monthly operating expenses, because many of its bills are not paid monthly, and besides, many of the items included in the operating expenses are excessively large and not proper to be allowed, such, for instance, as the item of $19,000 spent in 1912 for the promotion of new business, and a similar item for the same purpose in each of the years preceding, and also, the excessive executive salaries which have been paid since this suit has been pending, and also, the expenses of this litigation. However, taking the operating expenses just as we find them in the company's report for 1912 namely, $173,689.87 and dividing it by 12 we get $14,474 as the operating expenses for each month. Mr. Phillips, the secretary

and treasurer of the company, stated that the current bills per month during the year 1912 were about $17,000. (See page 758, vol. 3, printed record). It will be seen that Mr. Phillips' estimate was considerably higher than the reports of the company show the average monthly expenses to have been.

It seems to us utterly absurd to say that this company needs and should be allowed a working capital in excess of what the history of the company shows it has actually employed in the operation of the business. We repeat that these operating expenses include every item which the company includes in its estimate of working capital, except the necessary money to pay interest on its bonds, and certainly the public is not concerned with the bond interest item and cannot be required to furnish the necessary capital for that purpose. That a large part of the money included in the estimated working capital of the company is for the purpose of paying bond interest see the testimony of Mr. Phillips, the secretary and treasurer of the company, page 758, vol. 3; Mr. Wettling, page 807, vol. 3, and the General Manager B. C. Adams, page 651, vol. 3, printed record. That bond interest should be excluded.

> See, *Redlands, etc., Water Co.* v. *Redlands*, (Cal.) 53 Pac. 843 (844).
> *Santiago Water Company* v. *City of Santiago*, 118 Cal. 556, 62 A. S. R. 261.

### 11. Going Value.

The master included in his valuation of the company's property upon which it is entitled to a fair return $40,000 as a separate item for going value. That part of the master's report dealing with going value begins on page 46 of the printed record. Among other things he says:

> "Whether this element of plant value was purchased entirely by earnings below or above a fair return on capital invested is not, as to a portion of the time at

> least, disclosed by the company's records. In other words, it does not satisfactorily appear to just what extent the company's business was acquired at its own expense, and to what extent it was acquired at the expense of the public. The company was, at all times, entitled to a fair return upon its investment, and whatever was received by it in excess of a fair return should go, in some form, to the credit of the public. If employed in the promotion of new business, the value of such business has manifestly no place in the valuation made as a basis for fixing reasonable rates. The records show that between 1906 and 1913 the company paid out of its earnings and charged to operating expenses about $100,000 for the promotion of new business. In view of this fact, I conclude that an allowance of $40,000 for going value is sufficient."

When we come to discuss the operating expenses in a later portion of this brief we shall have occasion to refer to the new business item. At this point we merely call the court's attention to the master's discussion of it on page 49 of the printed record where he mentions the fact that in 1912 the company spent over $19,000 for the promotion of new business and the master, though reducing the amount, still allows $12,000 per annum or $1,000 per month to be included in the current operating expenses for that item alone.

## GOING VALUE DISCUSSED

We do not contend that in valuing this property we should proceed as if there were nothing here but the "bare bones" of the plant. We concede that this property is more valuable by reason of the fact that it is in a condition to be operated and is connected up and is being operated as a going concern and has an established business. This added value, however, inheres in the physical property and is one of the elements which enters into its present value as distinguished from junk value. It is our contention that in a rate case no element of purely business value as a separate

item of property should be included as a part of the assets upon which a reasonable rate of return is to be allowed. While the master does not say so in express words it must necessarily be understood that he valued the physical property of the company upon the basis that it formed a going operating plant with an established business. All of the witnesses as to value necessarily had this in mind because they were not valuing junk but were valuing a going plant with an established business. Alton D. Adams, the city's expert, makes his position clear in that respect. At page 871, printed record, he says:

> "I would like to say a very few words in reference to my valuation of this property as a plant in operation to forestall the possibility that I didn't fully cover it in what I said yesterday. I intended to make it perfectly plain that I have valued this Lincoln Gas Plant as a "going," operating plant, going in the sense that it is operating and is to be operated and used, as well as being used, for the purpose of making gas. Now the word 'going' as I understand it, is used in several senses in connection with public service properties and business. When I say I have valued the Lincoln Gas Plant as a 'going' plant I mean simply as an operating plant and suitable to be operated and intended to be operated. There is a 'going value' that attaches to a public service business. As I said yesterday I have not computed that value for the reason, primarily, that I don't think the going value of a public service business is an element to be considered in a rate case, but I want to forestall particularly any inference from my testimony that I value any of the physical properties of the company as junk, or as material to be removed or sold or anything of that sort. I have valued it all as equipment used and useful to be used in the gas business."

That Mr. Adams properly treated the element of "going value" and gave it all the weight it was entitled to in a valuation for rate purposes we think is fully sustained by the subsequent decision of this court in *Des Moines Gas*

*Company* v. *City of Des Moines*, 238 U. S. 153, 59 L. Ed. 1244, where the rule is stated in the first section of the syllabus as follows:

> "The going value of a long established and successful gas company was sufficiently taken into account in determining the value of the company's property for the purpose of testing the reasonableness of gas rates fixed by municipal ordinance, where the valuation was based upon a plant in actual and successful operation, and overhead charges were allowed for promotion, organization and development expenses."

In the instant case the master not only included in his overhead charges all of the expenses which would be incident to the promotion and development of the original plant but he recognized that, so far as the records of the company disclosed, the business has been developed by large items which have been charged to operating expense and he allowed $1,000 per month in the operating expenses to cover future development of business.

It is to be remembered that there is absolutely no evidence in the record to show any sacrifices were made by this company in the development of the business. The business was established and the pioneer work in developing the business was all carried on by the predecessor of the present company. The rates at which gas was sold prior to the adoption of the ordinance in question were voluntary rates established by the company itself. (See Mr. Foster's cross-examination of Mr. Phillips, secretary of the company, page 761, vol. 3, printed record). It had a monopoly of the gas business and could, and did, fix the rate at whatever figure it saw fit. The rate which was in existence at the time this ordinance was passed was $1.20 per M cu. ft. in case of prompt payment, but those who were delinquent in paying gas bills at the required time were compelled to pay $1.50 per M cu. ft. and those rates were a reduction voluntarily made

by the company from previous higher rates which it had voluntarily established. *It was incumbent upon the company to show that the going value which it asked to have included among its assets was a value that had been created by it out of its own funds.* Upon this point Mr. Justice Day in the *Des Moines Gas Case, supra,* said:

> "In this case, what may be called the inception cost of the enterprise entering into the establishment of a going concern had long since been incurred. The present company and its predecessors had long carried on business in the city of Des Moines, under other ordinances, and at higher rates than the ordinance in question established. For aught that appears in this record these expenses may have been already compensated in rates charged and collected under former ordinances. As we have said, every presumption is in favor of the legitimate exercise of the rate making power, and it is not to be presumed, without proof, that a company is under the necessity of making up losses and expenditures incidental to the experimental stage of its business."

No showing whatever was made, nor attempted to be made by complainant in this case as to what, if any, early sacrifices were made by the company or its predecessors in developing the business, the burden was upon it to do so and the court will not presume that any such sacrifices were made, in the absence of proof, *especially since the business throughout its entire history, prior to the passage of the present ordinance, was conducted under higher rates voluntarily fixed by the company itself.* This court, in the *Des Moines Gas Case*, cited *Cedar Rapids Gas Light Company* v. *Cedar Rapids*, 223 U. S. 655, 56 L. Ed. 594, and quoted with approval the following language therefrom:

> "Then again, although it is argued that the court excluded going value, the court expressly took into account the fact that the plant was in successful operation. What it excluded was the good will or advantage incident to the possession of a monopoly, so far as that

might be supposed to give the plaintiff the power to charge more than a reasonable price. (Citing authorities). An adjustment of this sort under a power to regulate rates has to steer between Scylla and Charybdis. On the one side, if the franchise is taken to mean that the most profitable return that could be got, free from competition is protected by the 14th amendment, then the power to regulate is null. On the other hand, if the power to regulate withdraws the protection of the amendment altogether, then the property is nought. This is not a matter of economic theory, but of fair interpretation of a bargain. Neither extreme can have been meant. A midway between them must be hit."

After calling attention to the fact that the master in the Des Moines Gas case though first disposed to allow an additional $300,000 for going value concluded to exclude it after the decision in the Cedar Rapids case, Mr. Justice Day, in the opinion in the Des Moines case, said:

"While there is a difference between court and counsel as to what the master meant by this, we think it is apparent that he meant to say that, applying the rule of the Cedar Rapids case, he has already valued the property in the estimate of what he calls its physical value upon the basis of a plant in actual and successful operation; for he said that otherwise its value would have been much less."

Going value was similarly treated in *Cumberland Telephone & Telegraph Company* v. *City of Louisville*, 187 Fed. 637, where the writer of the opinion said:

"It is insisted that $50,000 should have been included in the estimate as a distinct and additional enhancement of the value of the plant because of the fact that the company is a going concern. In valuing property of the character of that involved here, it would indeed be looking only at its 'bare bones' not to take into consideration the fact that the company is a going concern. The fact, however, though somewhat unconsciously to themselves, must necessarily, we think have been taken into account by the witnesses who testified as to values. Property under ground or overhead, thinly strung out

over many miles, would have very diminished value were it not in actual use for the purpose for which it was installed. The matter does not appear to have been passed upon in the report, nor, while it is argued in the brief, does any exception appear to be based upon this phase of the case, but we have concluded that this element of value would hardly be susceptible of accurate measurement by and of itself, and we shall consider the fact to be that it was an inherent factor in the estimates made by each witness who testified as to values."

Aside from the fact that there is a total lack of evidence to justify the inclusion of a separate element of going value upon the theory of early sacrifices on behalf of the company, and aside from the fact that so far as the company's records show its present business has been built up by large and extravagant expense for the promotion of new business, which has been included as a part of the operating expenses and paid by the public—over $19,000 in the year 1912—we contend that, upon principle, no element of purely business value can rightfully be included as a part of the property upon which the company is entitled to earn a fair return. The value of an existing business depends upon the amount of the net income. A business with no income would have little or no value. A business with a small income would have a small value, and a business with a large net income would have a value correspondingly large. The amount of the net income of a public utility depends, to a large extent, upon the rate at which its output is sold. The very fact that the company is resisting a reduction of the rate is a confession that it estimates that such a reduction will reduce its net income. It follows that the higher the rate the greater the value of the business, and if we include the value of the business as an asset in fixing rates then whenever the value of the business increases the rate must be correspondingly increased and we find ourselves reasoning in a circle. Such a principle, if applied, would destroy

the rate making power. This was recognized by Mr. Justice Hughes in the Minnesota rate case, *Simpson* v. *Shepard*, 230 U. S. 352, 57 L. Ed. 1511, where he said (P. 461):

> "The value of the use, as measured by return, cannot be made the criterion when the return itself is in question. If the return, as formerly allowed, be taken as the basis, then the validity of the state's reduction would have to be tested by the very rates which the state denounced as exorbitant. And, if the return permitted under the new rates be taken, then the state's action itself reduces the amount of value upon which the fairness of the return is to be computed."

Mr. Hurd, one of complainant's witnesses who testified in this case as to going value, based his testimony on the experience of the company under the old rate. A part of his cross-examination (page 1291, vol. 4, printed record) was as follows:

Q. "Assuming that the rate were to be reduced to $1.00, would it make any difference in the computation, that is, in the net results obtained as to the value of the item 'going concern.?' "

A. "Well, I should say it might, it would be introducing a new factor into the equation; yes, sir."

Q. "That the rate of return is an essential element in this computation, there is no question?"

A. "Yes, sir, it is the vital element."

Q. "So that if you take the rate in force at the present time and the rate which is sought to be enforced by the City, and make a computation with the two different rates you would arrive at two different results?"

A. "Most assuredly, because you would have different factors entering into the calculation. That might be exemplified if you had a losing concern, at present it was losing money, you would have a very different result in the going value than you would have if it was a profitable one, or a concern that was running on a profitable basis."

Q. "So that in that case you would get a different value for 'going concern?' "

A. "Yes, sir."

Q. "That is, in each instance?"

A. "Yes, sir."

Now, is it not apparent that "going value" as defined by the Company's witness, and as estimated by them, is nothing more nor less than an attempt to capitalize future net earnings accumulated at the old rate through an arbitrary number of years? (see Lea's Exhibit "K"). And Mr. Hurd makes it clear that in order to have any "going value" the business must be in successful and profitable operation, and that this depends upon the rate of return. Is not the rate of return the very point which constitutes the issue in this suit? The above quotation from Mr. Justice Hughes lays down the principle that *the value of the use of the Company's property cannot be measured by return when the return itself is in question.*

This court in *Omaha* v. *Omaha Water Co.*, 128 U. S. 180, 53 L. Ed. 991, held that going value was a proper element for which to allow compensation in a condemnation case, but it expressly pointed out that the going value for which compensation was to be made, was the "value of the business, as a going concern." The court also plainly indicated a distinction between a purchase case and a rate case, so far as going value is concerned. We quote the following from that opinion beginning on page 202.

> "That there is a difference between even the cost of duplication, less depreciation, of the elements making up the water company plant, and the commercial value of the business as a going concern, is evident. Such an allowance was upheld in *National Waterworks Co.* v. *Kansas City*, 22 L. R. A. 827, 10 C. C. A. 553, 27 U. S. App. 165, 62 Fed. 853, where the opinion was by Mr. Justice Brewer. We can add nothing to the reasoning

of the learned justice, and shall not try to. That case has been approved and followed in *Gloucester Water Supply Co.* v. *Gloucester*, 179 Mass. 365, 60 N. E. 977, and *Norwich Gas & Electric Co.* v. *Norwich*, 76 Conn. 565, 57 At. 746. No such question was considered in either *Knoxville* v. *Knoxville Water Co.*, 212 U. S. 1, 53 L. Ed. 371, 29 Sup. Ct. Rep. 148, or in *Wilcox* v. *Consolidated Gas Co.*, *supra*. Both cases were rate cases, and did not concern the ascertainment of value under contracts of sale."

In order to escape the logic of the contention presented in the preceding discussion under this subdivision, Mr. Lea, in explaining his theory, carefully avoids stating that the measures his "going value" by the amount of income yielded by the business. That is to say, he refrains from saying that there is so much "going value" in this plant, because it has a profitable business which is worth so much because it is profitable, and is yielding a certain annual net income, but he seeks to arrive at the same result by projecting the present plant six years into the future and theorizing as to what its net income will be during each of these years, and then he creates a hypothetical plant and projects it six years into the future and prophesies that it will cost a certain sum of money to enable this hypothetical plant to overtake the actual plant, and this sum of money that he thinks it will take to enable the imaginary plant to catch up with the imaginary progress of the real plant, is, after being reduced to its "present worth," the amount accepted by Mr. Lea, as the "going value" which inheres in this plant, and its business at the present time. It seems to us that this is but another method of stating the same thing. In other words, if the present plant were projected into the future by a pessimistic engineer whose forecast would indicate that the plant so projected would either lose money, or fail to make any net return, then, certainly, the prospective buyer would waste no time projecting his hypothetical plant into the future for six years or six minutes,

because, if he knew that the then existing plant which he was trying to value for the purpose of investing his money in it, did not make a net return of any amount during the next six years, at the then existing rate, he certainly would not add anything to the value of the physical property by reason of the fact that the plant was a 'g'oing concern." A going concern, in order to be of any additional value over the physical property, must be one *going successfully and yielding a profit to the owner over the operating expenses.* A plant which is going to the "bow-wows" may be a going concern, but there will be no "going value" for which any purchaser would be willing to pay an additional sum, above the value of the physical property.

### 12. Depreciation.

We have already cited page 44 of the printed record where the master stated that insofar as he relied upon arbitrary hypothesis he applied the straight line method of depreciation. In a previous portion of our brief we have pointed out that the master did not in any instance apply the straight line method of depreciation in its full force to the physical property but assumed that it had been kept in an operating condition by current repairs charged into the operating expenses and that in this way a large part of the depreciation had been taken care of. However, since the complainant makes a vigorous assault upon the straight line method of depreciation and insists upon the application of an entirely different method, we beg leave to discuss at some length the question of depreciation and to compare the straight line method with the method used by Mr. Lea in valuing the property on behalf of the Company.

In a rate case depreciation is to be considered in two different aspects:

(a) In arriving at the present value of the property it is necessary to deduct the amount of depreciation which has accrued up to the time of the valuation, and,

(b) In determining the amount of net earnings which is being realized or will be realized under a given rate, it is necessary to determine how much shall be allowed from annual gross receipts and included in the operating expenses to take care of current depreciation.

(a) AMOUNT TO BE DEDUCTED IN ARRIVING AT PRESENT VALUE

Mr. Lea's method of arriving at the present depreciated value of the physical property is purely fanciful and cannot possibly be applied with any degree of accuracy or justice in valuing plaintiff's property. He undertakes to apply the "sinking fund method," not only in providing for current depreciation, but also uses tables, which are only used by engineers in connection with the "sinking fund method," to find the present per cent condition of the property. This plant has been in existence since 1873. A large part of the physical property is old and greatly affected by depreciation from age, inadequacy and obsolescence. When this plant was installed no provision was made for a sinking fund to take care of depreciation, and therefore there is now in existence no sinking fund belonging to this corporation available for replacing any of the old parts of the plant, nor for taking care of accrued depreciation in any manner. The sinking fund method can only be used to finance future depreciation, and there is no way by which you can take an old plant affected by a large percentage of accrued depreciation and apply the sinking fund method in arriving at its present depreciated value. This method was not designed for any such purpose. The sinking fund method could, no doubt, be applied equitably if installed at the time of the installation of a new plant, provided the rate of interest could be so controlled as not to disturb advance calculations. Assuming

that the rate of interest used in the calculation is the same as that subsequently realized on the sinking fund, then, in valuing the plant in any subsequent year, the value of the physical property at the time of valuation, plus the sinking fund and the accrued compound interest up to that time, would approximate, with reasonable accuracy, the original investment, but a plant which has been in existence for many years, and is greatly affected by accrued depreciation, cannot be valued by the use of any tables worked out to find the present worth of such plants as are supposed to have installed the sinking fund method at the very beginning. Mr. Lea's method, not having been installed here at the beginning of this plant, and there being no such sinking fund to include in the present valuation as offsetting existing depreciation, the sinking fund method cannot be applied here, even though it might otherwise be deemed practicable. The vicious part of this method, as applied to this property, is the fact that by the use of the sinking fund method he obtains an excuse for applying the tables used in connection with that method in finding his "present per cent condition" of the property, and we think this is the reason for his using the sinking fund method in his valuation. We believe that Mr. Lea uses the sinking fund method, not for any advantage it would give the Company in financing future depreciation, but in order to gain the more than compensating advantage of being able to use the tables in finding the "present per cent condition" of the property. The effect of using those tables is to give the physical property a greater *present* value than it actually has. *Past years* do not count as heavily in estimating depreciation by the use of these tables as will be the case with *future* years. By the use of these tables heavy depreciation is to be *looked forward to* subsequent to the rate hearing, but *past years* are considered as having dealt lightly with the property and as not having seriously affected it by way of depreciation.

In order to see clearly how this system works, we call attention to Mr. Lea's testimony on page 401, printed record, dealing with the purifying house. He gives the purifying house an assumed life of fifty years, and finds that it is now twenty-two years old. In other words, twenty-two years of the life of the building is gone, leaving twenty-eight years of remaining life, or, in percentages, 44 per cent of the assumed life of the building has expired and 56 per cent remains; yet, by the use of these tables, Mr. Lea finds that the present per cent condition of that building is 73 per cent. That is to say, according to the normal process of thinking, the average man would say that since 44 per cent of the assumed life of the building has expired, that it had been affected 44 per cent by way of depreciation, and that there would be but 56 per cent of its value remaining, but by the use of Mr. Lea's tables, in arriving at the present per cent condition, he is able to gain 17 per cent and runs it up from 56 per cent to 73 per cent. His explanation for this is found at the bottom of page 401, where he says: "Because the depreciation does not occur in a straight line. Your depreciation accrues very much slower in the first half of the life of any equipment than it does in the last half. A piece of machinery having a life of fifty years and only twenty-five years old will be very much more than one-half of its original value." One difficulty about that explanation is that it has no basis in actual experience. It is purely fanciful. Another objection to it is that it has nothing to do with the use of the tables for finding the present per cent condition of a public service plant, which has been in the past, and is at the present, taking care of depreciation by the sinking fund method. Those tables have nothing whatever to do with the matter of whether depreciation occurs more rapidly in the later years than in the earlier years, and that assumption does not, in any degree, enter into those tables. It may be that an old plant or an old piece of equipment of any kind may have the same present efficiency

and the same earning power as if new, and yet that does not say that the plant or the equipment has not depreciated. The depreciation is there, wholly regardless of its efficiency or its productive power. The mains in the streets will carry just as much gas and carry it just as efficiently when half of their life has expired as they did when new, yet the mains have depreciated, and any purchaser would say that inasmuch as they will only last half as long as new mains, they are only worth half as much.

Another example illustrating the advantage gained for the plaintiff by the use of Mr. Lea's method of finding the "present per cent condition" of this property is quite clearly shown in his testimony concerning the coal shed, on page 404. He assigns to this shed an assumed life of twenty-five years and he finds that it is twenty-two years old. It therefore has but three remaining years of its assumed life, yet he finds its present per cent condition to be 25 per cent. It will be seen that the actual remaining life of this shed is but 12 per cent of the assumed life, yet Mr. Lea gives its present per cent condition as 25 per cent, thereby more than doubling the present depreciated value of the property. The sinking fund method of financing future depreciation contemplates that the corporation will set aside annually such sum as, put out at compound interest at a rate which it may safely be assumed will at the end of the life of the property or equipment under consideration, yield a sufficient sum to replace the property when it is entirely gone as the result of depreciation. Aside from extensions to the property, the sinking fund, plus the accrued interest, plus the remaining value of the property, will not equal the original investment at any point beteewn the initial date and the objective date, but the power of the sinking fund to accumulate compound interest is necessary to reproduce the investment at the end of the plant life. But as a matter of fact it is doubtful if any company ever did set

aside such a fund and keep it all out at interest from the time of installing the plant to the time it went to pieces as a result of depreciation. So we say that in actual practice the sinking fund method is but a theory and finds no president in actual experience. Even Mr. Lea admits that the theory of the sinking fund method is not ordinarily carried out, but that the Company uses this fund as it needs it to make improvements and extensions.

Mr. Lea testified:

Q. "Well, that would put a public gas company in the loaning business, wouldn't it—money loaning business?"

A. "No, sir; I think they could put the money in their own property; that is the usual practice."

It will be seen that this bit of testimony corroborates Alton D. Adams, the City's expert, as the following extract from his testimony (p. 850) shows:

> "How, then, is the value of a plant, as we say, meaning by plant, all the things engaged in the carrying on of that portion of the gas business, for instance,—how is that to be maintained? The only way it can possibly be maintained is by extending the property in one way or the other. You may extend it by putting in bigger machinery—that is more valuable than the machines were on a certain date, or you may extend it by laying additional new mains, but extend it you must if you are to maintain a value it had on some specific date. And that, of course, is what we mean when we talk about maintaining the value of a plant. * * * If you are going to keep the value of a plant as on a certain day you must extend it, either by longer mains or bigger gas holders, and this principle applies to gas or electric plants or any other aggregation of physical things."

It is true that at the first trial of this case, Professor Bemis, who appeared as an expert witness for the City, advocated this "sinking fund method" in financing *future depreciа-*

*tion,* but it will be noted that he took this property as he then found it and advocated the application of the sinking fund theory, to take care of depreciation from that time forward.

As against this sinking fund theory Alton Adams says (p. 852):

> "As to which method is usually adopted in actual practice, the universal method in the gas business is to put the money into the plant and keep your plant up and keep adding to it. I have never heard of the wonderful one horse shay method of replacing a plant, where all go out in a wonderful collapse and then replaced by some sinking fund process."

When we undertake to apply the sinking fund theory to an old plant and thereby to adjust past depreciation which has already accrued, as well as to provide for future depreciation, and in the process of doing so we undertake to arrive at the *present* value of the physical property by the use of tables, designed to find the present value of *a sinking fund* which has been provided from the beginning, we are attempting to do something that is absolutely unfair in its results to the public and totally impracticable and impossible of performance. We call attention to the fact that at the former trial the experts of the Company, and also the counsel of the Company, strenuously opposed and ridiculed the theory of Professor Bemis involving the application of the sinking fund method. As opposed to the sinking fund method, Mr. Alton D. Adams, the present expert of the City, has undertaken to value this plant by the application of what is known as the "straight line method" of depreciation, and also to provide for future depreciation by the same method. It treats gas consumers in the earlier stages of the Gas Company the same as gas consumers in the latter stages. They all have to bear an equal annual proportion of the depreciation, which is constantly going on in the plant. No such results come from the appli-

cation of the "straight line method" of depreciation as postponing the heavy burden of depreciation to future generations, but each generation, and the gas consumers of each year, bear their fair share of the depreciation.

Foster, in his work entitled "*Engineering Valuation of Public Utilities and Factories,*" on page 170, says:

> "By far the most commonly used method of depreciating machinery and plant is that known as the straight line. By this method a length of life of the particular apparatus under consideration is estimated and determined by the best experience and good judgment available, then this length of life divided into 100 will give the rate at which the depreciation is to be figured; that is, the rate per cent per annum, or the annual rate at which the depreciation is to be computed. If the life of an engine is assumed to be twenty years, then its cost new will be depreciated one twentieth of such cost each year, or at the rate of five per cent per annum on the original cost new.
>
> "While this method is in itself an assumption, yet it does away with all side assumptions or guesses as to how much the machine is depreciating each individual year. It is the method used by many of the public utility commissions, by the courts, most generally by public accountants, and by far the greater majority of engineers."

On page 171, in relation to the sinking fund method, he says:

> "This plan is based upon the assumption that a fund is to be laid aside annually to cover the depreciation. At the end of the year a certain amount of money, as determined from sinking fund tables, is deposited at interest, this interest is annually compounded and the regular contribution is added to it, the whole sum drawing interest at the regular rate for the ensuing year, when, the interest for the year just past having been added, the regular contribution is again made; and so it continues until the assumed period of life of the object or apparatus has come to an end, when there should be on deposit a sum equal to the first cost of the apparatus less the scrap of salvage value.

*"Two factors have to be predetermined in this case, first the length of life it is presumed that the object to be depreciated will last in good serviceable condition or until is usefulness has disappeared; second, the rate of interest that can be secured for the deposits, the interest to be compounded each year at the time the annual contribution is made."*

Hayes, in his work on *Public Utilities,* section 139, says:

"When the property of a public utility consists of plant alone, the loss in value must be determined by the straight line method, and when the property consists of plant and depreciation reserves, the loss in value must be ascertained by means of what has been called the sinking fund method."

The same author in section 162, says:

"If there is plant alone as representative of the property of the undertaking, the straight line method when age and life have been determined with accuracy, will show the absolute loss in value and consequently this loss in value gives the true depreciation of the property. If the property of the undertaking consists of plant and reserves, the sinking fund method will likewise show the loss in value if properly applied. But the equity of this method has been the subject of much doubt."

In order to verify what we have said in regard to the tables used by Mr. Lea in finding his present per cent condition of each of the items of physical property, we call attention to pages 185 to 189, inclusive, of Foster's work, above cited, where those tables are set out. It will be seen that they are used in connection with the sinking fund theory and they presuppose an assumed rate of interest at which the sinking fund is invested. We can readily understand how the present worth of a fund, which is to mature at a future date, can be arrived at by the use of these tables, and with the assumption of a given rate of interest, but how the present value of physical property can be arrived at in this way, or how any rate of interest has the least possible bearing upon the present

condition of physical property, we are absolutely unable to understand. As we have already said, in order that this sinking fund method, and this system of finding the present per cent condition, or present worth, of this plant could possibly approximate anything like fairness and justice to the public, it would be necessary for this corporation to have at this time an actual sinking fund to be included, and which would be included, in the valuation, and in the present per cent condition arrived at by the use of these tables. These tables involve not only the property, but the fund, and this company has no such fund and these tables are not at all applicable.

In this connection, we call attention to the very clear and rational explanation of the straight line method used and applied by Alton Adams, beginning on page 847 of the printed record. It will be seen that Mr. Adams takes the practical and sensible view of the matter and treats the depreciation as it is actually treated in practice. He says that he knows of no way by which depreciation can be taken care of with the passing years, excepting by the process of making extensions and renewals. That is to say, a given piece of equipment, when half of its life is gone, is only half as valuable as the same equipment new, and the only way that the owner of the property can keep his investment at its new value is to add new equipment by way of extending and enlarging his property. At a given time he may have two pieces of equipment in lieu of the one which he originally purchased, and the present value of the two, less depreciation, may not exceed the new value of one, but his investment is kept intact and unimpaired. If he keeps the same equipment without making any extensions, no matter how much he may do by way of repairing it, and no matter how efficient it may be in its operation and use, its value is affected by age and other elements which bring about depreciation, and the time will come when his investment will cease to have any

value. Looking at the plant as a plant, if we assume, as we must, that the corporation is entitled to collect from the public rates high enough to enable it not only to pay fair returns, but also to keep its original investment unimpaired, the only practical way that this can be done is to make extensions to the property, so that the sum total of the original property, plus the extensions, at any given time will be worth the original investment, or, rather, will equal the sum required to reproduc the original property at the time of valuation.

In order to show the advantage to the Company gained by Mr. Lea's method of dealing with accrued depreciation, whereby the heavy burden of depreciation is postponed to the future, and whereby he is able to give to the property a larger present value than he would be able to fix if he applied the straight line method of depreciation, we have prepared the following table setting out all of the property of the Company, to which Mr. Lea applies depreciation, using the cost, life and ages used by him, but applying the straight line method of depreciation used by Mr. Adams:

TOTAL DEPRECIATION OF LINCOLN GAS PLANT TO JANUARY 1, 1913, USING THE COST, LIFE AND AGE OF ITEMS PER LEA, AND USING THE STRAIGHT LINE METHOD.

| PLANT ITEMS | Years Life Per Lea | Years Age Lea Lea | Cost Per Lea | Total Resulting Depreciation Straight Line |
|---|---|---|---|---|

| | | | $954,337.00 | $296,346.06 |

* Used same years ages as street mains.

The foregoing tabulation will show that Mr. Lea's present value of buildings, works equipment and distributing system, would be $657,911 if he had applied to his reproduction cost the straight line method of depreciation. By the use of his sinking fund theory, however, he gets for the present value of the same property $781,376, or a gain of $123,385, merely by selecting a favorable method of depreciation. And, as we have shown, he was obliged to reject the method which Mr. Foster in his work already cited says is the one almost universally used by engineers and commissioners, and accepted a method seldom if ever followed by any court or commission.

ANOTHER APPLICATION OF STRAIGHT LINE DEPRECIATION TO LEA'S VALUES.

Applying the straight line method of depreciation to all of the tangible property, except real estate, belonging to the complainant, using Mr. Lea's ages and assumed life in all cases, we find that the total amount of depreciation equals 31.5 per cent of the total reproduction cost.

Eliminating all paving over mains and services and services paid for by consumers and applying the same method in ascertaining the accrued depreciation we have the following:

| | | |
|---|---|---|
| Tangible property (see Exhibit "425-A, p. 1368) Lea | | $928,423 |
| Deduct: | | |
| Real estate | $19,320 | |
| Paving over mains and services (Exhibit "425-E," p. 1372) | 146,082 | |
| Services paid for by consumers | 33,789 | 199,191 |
| | | $729,232 |
| Deduct 31.5 per cent for accrued depreciation on straight line theory | | $229,708 |
| | | $499,524 |
| Add: | | |
| Correct Lea value of real estate | | 18,520 |
| Working Capital found by Master | | 60,000 |
| Going Concern value found by Master | | 40,000 |
| Present Value, January 1, 1913 | | $618,044 |

This is $58,521 less than the valuation found by the master.

(b) Provision for Future Depreciation.

Beginning on pages 1195-1200, Alton Adams explains his system of taking care of future depreciation, identifies and explains Exhibit "430," "430½" and "431." In Exhibit "430" (p. 1632) he states the amount of annual depreciation

estimated on his new cost of the Company's property as he found it to exist in each of the years 1907-1912, both inclusive. The first column of the exhibit gives the years. The second column gives the amount of annual depreciation for each of the years, which is arrived at and explained in Exhibit "431" (p. 1633) by taking each of the items of property owned by the Company at the end of the particular year, determining when it was installed or purchased, assigning to it an assumed life, estimating its new cost, and dividing the new cost by the number of years of assumed life, he gets the annual depreciation of that particular piece of property. These amounts of annual depreciation on each piece of property owned at the close of the particular year, are added together, as shown in Exhibit "431," which is carried forward into the second column of Exhibit "430" as the total annual depreciation of the Company's property for that particular year.

Now Mr. Adams in his estimate of operating expenses has allowed 9 cents per thousand cubic feet of gas sold to cover repairs, renewals and depreciation. In his Exhibit "430½" (p. 1632) the first column gives the years from 1907-1912 and the second column gives the M feet of gas sold during these said years. Taking the number of M feet of gas sold during any particular year and multiplying it by .09 we get the amount placed in the third column of Exhibit "430" to cover the amount which Mr. Adams says is ample to cover all items of repairs, renewals and depreciation for that particular year. Now, if we deduct the figures in the second column of Exhibit "430" opposite a particular year from the figures in the third column for the same year the remainder will be the figures in the fourth column showing the excess resulting from allowing 9 cents per M feet of gas sold, over the actual amount necessary for depreciation and renewals for that year, which excess, Mr. Adams says, is more than sufficient to cover the ordinary items of repairs. Let us take the year

1907 for example: Mr. Adams finds that the Company sold, in that year 179,366 M ft. of gas. Multiplying this by 9 cents we get $16,142.94, the amount placed in the second column of Exhibit "430," to cover repairs, renewals and depreciation. Now, in order to arrive at the amount which will be left for the item of repairs, we deduct $6,962.74 found in the second column, being Mr. Adams' estimate of depreciation and renewals for that year, from the $16,142.94, found in the third column of Exhibit "430," and this leaves us the figures opposite 1907 in the fourth column of Exhibit "430," as the excess resulting from allowing 9 cents per M ft. of gas sold in 1907, which excess is available for taking care of ordinary repairs. Exhibit "430½" deals with the same matter, except that the results are reduced to cents per M cubic feet of gas sold. It will be seen that the fourth column of Exhibit "430½" reduces the third column, or annual depreciation for the respective years, to cents per thousand cubic feet of gas sold, and the fifth column reduces the excess remaining in the sum produced as the result of multiplying the amount of annual sales by 9 cents and deducting from the product the amount allowed to take care of depreciation and renewals. It will be noted that in this last column of Exhibit "430½" the amounts remaining in the respective years to cover repairs run from 4.35 to 5.12 cents per M feet of gas sold, and Mr. Adams testifies that, from his investigations of this plant and other plants, and his experience and study of the matter, 3 cents per M cubic ft. sold would be ample for ordinary repairs. So it will be seen that in Mr. Adams' estimate of 9 cents per M cubic feet of gas sold to take care of depreciation, renewals and repairs, the amount allowed is ample to cover these items and to protect the company against any possible mistakes that might arise from understating the new cost, or overstating the probable life of a given piece of property.

In this connection we call attention to Adams' Exhibit "307" (p. 1495-6, vol. 5) wherein he shows a total reported

by the company as having been spent for repairs and renewals for the years 1903 to 1912 inclusive, and has reduced the sums so expended to cents per M cubic feet of gas sold in each year. Exhibit "309" (p. 1496-7, vol. 5) gives the details as to the particular parts of the plant upon which this money was expended. Take the year 1903 on Exhibit "309" for example: By reading to the right we find certain sums of money set in various columns under different headings such as buildings, gas benches, etc., and finally in the last column of the second sheet of the exhibit the total spent for that year in repairs and renewals is shown to be $5,912.21 and this total is carried back into the third column of Exhibit "307" after the year 1903 and this then is reduced to cents per M cubic feet and the result is placed in the last column of Exhibit "307." The matter is treated in the same way for each of the years. The object of these exhibits is to show what the company has been spending in cents per M cubic feet of gas sold during each of those years as shown in the final column of Exhibit "307." Mr. Adams' explanation of these exhibits may be found beginning on page 975, vol. 3, of the record. Mr. Adams was of the opinion that a considerable portion of the money thus spent was spent for objects other than items of actual repairs, and that quite a considerable portion of the money so spent was spent for renewals and for extensions and insofar as this was done existing depreciation was to that extent reduced. In other words, he maintained that the records of the company indicated that, to a considerable extent at least, the company has been taking care of depreciation over and above what would be a normal expenditure for such repairs as were necessary to keep the plant in operating condition from day to day. To quote from his testimony on page 977, vol. 3:

> "'Repairs' or 'repairs and renewals' is so slippery and so uncertain until we get down close to the matter and examine the things that were done and paid for and

called 'repairs.' In the first place let us take a gas property that is not extended at all in a particular year, is not enlarged I mean, in any way, and no part, that is no complete unit of it, as a machine of some kind, or a length of main or a gas meter is replaced—no unit of that structure is replaced during the year and no unit is added by way of extension or enlargement during the year. Now, in a case of that sort there would undoubtedly be small items of expense to be denominated 'repairs' that must be done and made on the gas property— there would be a screw loose here and a small patch to be put on there, and perhaps a diaphragm to be put in a meter, perhaps a retort to be put on a gas bench, etc., on down the line, but at the end of the year we should have simply the unit structures of machines, and the mains, etc., that we had at the beginning of the year, with no additions to them, and no one of them would have been replaced entirely. Now, there is perhaps an illustration of a simple bare case of repairs pure and simple as such. It is very seldom that the treatment of a gas property stops there in the way of repairs and renewals, but if it does stop there, the property so treated necessarily has shrunk in value during the year. It is impossible, of course, to keep up the value of any physical structure by simply repairing. The only way that a physical structure can be kept up to a given plane of value, assuming an even range of prices of material and labor, is by enlarging the structure. It is impossible to do it in any other way. Enlarge the structure and add some new gas meters in the case of a gas plant, or run another mile of main or build a new holder, or put up a new building, and you may put into the value of that new structure—in the cost of that new structure—that may add enough to offset the shrinkage in value of the rest of the structure. Otherwise, we can not keep up the value of the structure as a whole."

After the above explanation Mr. Adams proceeds to explain (p. 977) that the thing called "repairs" and the thing called "renewals" are generally very much mixed, and that in order to ascertain how much depreciation has been taken care of under these headings in addition to taking care of items of repairs strictly as such it is necessary to see what was done with the money or if this cannot be determined, allow for

repairs such sum as experience shows to be normal and treat the balance as having been applied to renewals and extensions and as having, to that extent, taken care of depreciation, not in the case of any specific article, but in the value of the plant as a whole. Mr. Adams then identifies and explains Exhibits "310" to "319" inclusive. These exhibits show the amount spent under the head of "repairs and maintenance" for the various parts of this physical plant during the years 1903 to 1912 inclusive. And beginning at the bottom of p. 978, vol. 3 of the record, he explains:

> "And so I have figured up here in the way I have indicated the amount they had expended on this property by way of repairs and renewals, and have inquired to see the exact meaning of those figures set down here in Exhibits '310' to '319,' inclusive, the exact items, that is, a description of the items appearing in the gas reports for which these moneys were expended, and it appears from an inspection of these items and from what familiarity I have been able to gain of the property by looking it over, that a number of new and valuable things, in addition to the mere putting on of patches and tightening up of screws and tightening up of hooks and such ordinary repairs,—that a number of new and valuable things were bought to replace the older things that had become, as it was thought, too old to be used. So that, I think in this plant during this period of years 1903 to 1912, in the cost of repairs and maintenance we had a substantial amount of money spent to offset the shrinkage in value of the property aside from what was spent to merely, as we might say, keep the thing going, keep the screws tightened up."

He then calls attention on page 979 to certain of the items in Exhibits "310" to "319" which cannot be for ordinary repairs, but must have been for renewals, and we submit that it requires but an inspection of these exhibits to show that this company has under the head of "repairs and maintenance" spent a substantial sum during these years in replacing worn out and discarded parts of its plant and has charged the same to current operative expense. For instance on Ex-

hibit "311" which shows the "repairs and maintenance" items for the year 1904, it will be seen that $1,113.69 was spent on the water gas apparatus and $1,231.84 on the coal gas apparatus. We submit that no such sums could possibly have been spent unless these machines or appliances were substantially reconstructed and to this extent they were taking care of depreciation out of operating expenses, which, whether proper or not, furnishes no criterion for normal expenses in making repairs, which is the point we are now dealing with. The last item on Exhibit "311,' p. 1472, vol. 4, printed record, is $1,819.97 for setting and removing meters. This includes, not only old meters taken out and new ones put in by way of substitution, but it also includes new meters put in for all new consumers, the cost of which enters into the appraisal by the company of the physical property which is here valued and is capitalized as a part of the plant for which the Company asks a return. Insofar as this item includes the cost of installing new meters for new customers it includes extensions to the plant and forms no part of legitimate operating expense nor does it furnish a criterion for normal expenditures for repairs. We make the same observations with reference to the same items in Exhibit "312," p. 1472, vol. 4, printed record, and also in that exhibit we find $949.45 for street main maintenance and $1,060.36 for "service maintenance." Since very few repairs can be made on street mains underground it is quite probable that some extensions were made and charged to operating expense, which would not be proper, and most of the balance of the item was probably for sections of leaking mains taken up and renewed and thereby depreciation was taken care of. The same may be said of the large items for service maintenance.

Exhibit "313," p. 1472, vol. 4, printed record, has a number of large items which could not possibly have been for repairs. Here again $1,976.09 was spent on the gas benches,

$2,312.47 on the water gas apparatus, $1,125.61 on the coal gas apparatus, and no one will contend that any such sums could have been spent in merely repairing these units of the gas plant. They were overhauled and reconstructed. The water gas apparatus, or at least some definite unit or part of it, was undoubtedly taken out and a new one put in, and the expense run into the "repairs and maintenance" account and spread over two or three years (see Frueauff's evidence, pp. 457-8, printed record).

In Exhibit "314," p. 1472, vol. 4, printed record, we find in the year 1907 another charge in connection with the gas benches of $4,022.24, and repairs to water gas generator apparatus $1,045.52 and for these two items we find a substantial charge in 1908 shown in Exhibit "315," p. 1472, vol. 4, and 1909 shown in Exhibit "316," p. 1472, vol. 4, and 1910 shown in Exhibit "317," p. 1472, vol. 4, and 1911 shown in Exhibit "318," p. 1472, vol. 4. Now as to coal gas benches, Mr. Honeywell at the former trial testified that the three south benches were built in 1901 and were refilled again in 1904. He was estifying in 1907 and he stated (p. 148, printed record):

> "I cannot tell you how many times those arches have been rebuilt, or how many times those benches were rebuilt, but we built the arches and refilled them last year."

He then stated that this expense was charged to "bench repairs" and spread over a period of time which they estimated the benches would last. So it is clear that these items expended in these several years for repairs and maintenance on coal gas benches covered not only repairs, but the renewal of the benches themselves and to that extent took care of depreciation. In fact, this is born out by the testimony of Mr. Phillips at the present trial beginnig on page 1293, vol. 4, printed record. He says that replacements are charged to

operating expenses and that in case of large items of this kind they spread the amount over several months. On this subject he testified:

Q. "Then what is the system of keeping up the plant, the replacing of old apparatus with new, taking out a section of main that has become defective and can not be used and putting in a new section, and taking out an old water gas set and putting in a new, the expense has either been added to your construction account or entered in your operating expense under the items of 'repairs and maintenance?' "

A. "Yes, sir, it has to go into one of the two places."

Q. "And sometimes, as you have said, part of the item is entered in each account?"

A. "Yes, sir."

Q. "And that is the way the company has kept up its plant and kept an efficient and working plant in times past?"

A. "Yes, sir."

Q. "And what is the present condition of the plant, is it in good condition or has it been allowed to run down and deteriorate?"

A. "As far as I know it is in good condition. I am not an engineer and do not know much about that end of it."

Q. "But such condition as we now find it in, and you you say it is in good condition, has been maintained in the manner you have outlined there by adding new articles of construction and entering it in your construction account and adding it to the assets or adding it into current expense?"

A. "Yes, sir."

Q. "Then in your opinion has the amount and sums expended by the company since this present management took charge of it been sufficient to maintain the value of the plant and keep the investment unimpaired?"

A. "It has."

Q. "That is the method employed by this company to to take care of depreciation and keep the plant from depreciating and running down?"

A. "Yes, sir, we call it that."

And that was the view taken of the matter by Mr. Justice Lurton in the opinion handed down in this case when the case was here before. We quote from the opinion, page 363 (223 U. S.):

"The work of reconstructing and replacing old parts by new in a plant of this kind must, in the very nature of things, be going on constantly. Heretofore it seems to have been so well and continuously done that the value of the plant as a whole has suffered less than 1 per cent per annum if the total depreciation be distributed through the more than 30 years of operation. So far as can be now seen, the construction and replacement charges, have up to present time been borne by current revenue, with the result that the revenue remained in the single year of 1907 showed a net surplus of $73,851.83, a sum large enough, if distributed to share holders upon the basis of the value of property engaged in the business as claimed by appellant to have paid a dividend of 10 per cent and about 15 per cent upon the valuation settled by the circuit court.

"There is no finding as to the extent of the application of the revenue of 1907 to reconstruct or replacement as distinguished from current repairs and operating expenses. It is, however, plainly inferable that the revenue of that year was used to the extent necessary. If, in the past, reconstruction and replacement charges have been met out of current expenses, the fact must be taken into consideration, both when we come to estimating future net income and in determining what sum shall be annually set aside to guard against future depreciation. This doubtless influenced the court below in settling upon the amount of $8,000 as a sufficient annual appropriation of income as insurance against future depreciation. But, if the constantly re-occurring necessity to do reconstruction or replacement work was in 1907 met out of the current income of that year, thereby diminishing the net income, the fact should be given weight in estimating future net income; otherwise there will be a

> double deduction on that account first by paying such charges as they occur, and thereafter by a contribution out of the remaining income for the same object."

In view of the testimony of Mr. Phillips above quoted and the testimony of Mr. Alton Adams above cited, the language of Mr. Justice Lurton is quite in point on the matter under discussion. If this company is renewing and replacing its property and charging the same to operating expense, then the gas consumers are, to that extent, already taking care of the item of depreciation, and the amount so spent should either be eliminated from the operating expenses when we come to estimate the net arnings, or should be taken into account when we come to determine the annual allowance to be made from gross receipts to take care of future depreciation.

We wish to make perfectly clear the real difference between the straight line method of estimating depreciation used by Mr. Adams and adopted by the master, and the sinking fund method employed by Mr. Lea, and to point out clearly, if we can, the important difference in the results obtained, not only as to the present value of the property, but as to provisions for future depreciation.

The total amount of accrued depreciation must be deducted from the cost of the plant to determine its fair value. If the amount of depreciation is not correct, the resulting value of plant will be in error to the same extent, for depreciation is simply another name for value lost.

So, too, the true amount of annual depreciation must be known to fix a reasonable rate, for if the allowed depreciation is too small the plant will be worn out before consumers have paid enough to replace it, while if too much depreciation is allowed the company will receive from consumers more than the plant cost.

Obviously, then, the annual payment by consumers for depreciation should just equal the annual loss of value by the plant. This annual loss represents a part of the value of the concrete physical things that make up the plant, and the fairest assumption to both consumers and the company is that the value lost annually by each item of equipment is its total cost divided by its years of total life, both expired and expected. This is known as the straight line method of depreciation.

Mr. Lea, while making some incomplete figures for straight line depreciation, bases all his conclusions as to value on computations relative to a sinking fund that is not, and never was owned by the Gas Company, and has no existence outside of his imagination.

Mr. Lea attempts to measure the annual depreciation of plant items by showing what sum must annually be invested at compound interest to produce a fund equal to the cost of each item at the end of its estimated life, and to measure total depreciation by finding the amount of said fund at the end of a series of years equal to the age of the plant item.

On this basis, 0.89 of one per cent of the cost of a plant item must be invested for depreciation annually to produce an equal fund at the end of a fifty-year life if the rate of interest is 4 per cent, but 0.34 of one per cent of the cost, or half the former amount, will be sufficient if the rate of interest is 6 per cent. So, again, with a life of fifty years for a plant item, the fund supposed by Mr. Lea to represent its total depreciation at the end of twenty-five years is 32.3 per cent of its cost if the rate of interest is 3 per cent, but the fund reaches only 18.9 per cent of the cost if interest is figured at 6 per cent.

*This method overlooks the fact that it is not a fund at interest in some bank, but an operating, wearing, depreciating plant that is being valued.*

How much more fair and accurate is the simple and reliable rule that depreciation increases uniformly with age, so that when one-half of the life and period of use has expired, one-half of the value is gone.

One advantage of computations gained by the sinking fund method of depreciation is that short life and consequent large annual depreciation may be assumed for plant items, and then the total amount of depreciation for *past years* on the straight line basis can be much reduced by assuming a suitable rate of interest for the fund. Thus Mr. Lea has cunningly selected a combination of plant life and interest rate that gives an annual depreciation of $20,865 and a total depreciation for past years of only $172,961, while straight line depreciation with his own figures for cost, life and age of plant, amounts to a total of $296,346, or $123,385 more. So Mr. Lea saves $123,385 for the value of the plant by substituting the sinking fund method for the straight line method.

The following tabulation furnishes the means of making comparisons between the results obtained by Mr. Adams and Mr. Lea by their respective methods of handling depreciation:

DEPRECIATION AND VALUE LINCOLN GAS PLANT, JANUARY 1, 1914.

| Items | Per Alton Adams | Per Mr. Lea |
|---|---|---|
| Cost of plant except land..... | $548,947.00 | $954,337.00 |
| Total depreciation, straight line.. | 135,827.00 | 296,346.00 |
| Cost of plant except land..... | | 954,337.00 |
| Total depreciation per sinking fund | | 172,961.00 |
| Value of plant per sinking fund... | | 781,376.00 |
| Excess of straight line depreciation | | 123,385.00 |
| Annual depreciation, straight line. | 10,914.00 | 31,639.00 |
| Annual depreciation, sinking fund. | | 20,865.00 |

| *Percentages*— | | |
|---|---|---|
| Total depreciation, straight line... | 24.6 | 31.5 |
| Value of cost, straight line..... | 75.4 | 68.5 |
| Total depreciation, sinking fund.. | | 81.9 |
| Annual depreciation, straight line. | 1.9 | 3.3 |
| Total times annual depreciation, sraight line ..... | 12.5 | 9.3 |
| Total times annual depreciation, sinking fund ..... | | 8.2 |

If a public service corporation sees fit to operate its property for a series of years without providing for depreciation, it cannot, in a rate hearing, call upon the public to make good past losses, no matter whether those losses result from mistakes, bad judgment, bad management, or from excessive dividends or bond interest. This point is clearly stated by Mr. Justice Moody in *Knoxville Water Co.* v. *Knoxville*, 212 U. S. 1, 53 L. Ed. 371:

> "To arrive at the present value of the plant, large deductions were made on account of the depreciation. This depreciation was divided into complete depreciation and incomplete depreciation. The complete depreciation represented that part of the original plant which, through destruction or obsolescence, had actually perished as useful property. The incomplete depreciation represented the impairment in value of the parts of the plant which remained in existence and were continued in use. It was urgently contended that, in fixing upon the value of the plant upon which the company was entitled to earn a reasonable return, the amounts of complete and incomplete depreciation should be added to the present value of the surviving parts. The court refused to approve this method, and we think properly refused. A water plant, with all its additions, begins to depreciate in value from the moment of its use. Before coming to the question of profit at all the company is entitled to earn a sufficient sum annually to provide not only for current repairs, but for making good the depreciation and replacing the parts of the property when they come to the end of their life. The company is not bound to see its property gradually waste without making provision out of earnings for its replacement. It is entitled to see that from earnings the value of the prop-

erty invested is kept unimpaired, so that, at the end of any given term of years the original investment remains as it was at the beginning. It is not only the right of the company to make such a provision, but it is its duty to its bond and stockholders, and, in the case of a public service corporation, at least, it is its plain duty to the public. If a different course were pursued the only method of providing for replacement of property which has ceased to be useful would be the investment of new capital and the issue of new bonds or stocks. This course would lead to a constantly increasing variance between present value and bond and stock capitalization,—a tendency which would inevitably lead to disaster either to the stockholder or to the public, or both. If, however, a company fails to perform this plain duty and to exact sufficient returns to keep the investment unimpaired, whether this is the result of unwarranted dividends upon over-issues of securities, or of omissions to exact proper prices for the output, the fault is its own. When, therefore, a public regulation of its prices comes under question, the true value of the property then employed for the purpose of earning a return can not be enhanced by a consideration of the errors in management which have been committed in the past."

**13. Revenue.**

The amounts listed below are the gross receipts from sales of gas for the respective years and are found opposite page 1716, printed record, at places indicated after each year.

| Year | Gross Outside Receipts | Exhibit | Line |
|---|---|---|---|
| 1907 | $215,776.20 | 26 | 910 |
| 1908 | 234,347.51 | 26 | 910 |
| 1909 | 245,124.74 | 27 | 910 |
| 1910 | 251,492.37 | 28 | 910 |
| 1911 | 274,292.95 | 29 | 910 |
| 1912 | 282,162.11 | 30 | 910 |

From these amounts should be deducted the gross receipts from the sales of gas for the territory outside of the city limits.

| Year | Gross Receipts | | For Lincoln |
|---|---|---|---|
| 1907 | $ 888.00 | leaving | $215,776.20 |
| 1908 | 1,554.58 | leaving | 232,792.93 |
| 1909 | 1,249.58 | leaving | 243,875.16 |
| 1910 | 2,984.66 | leaving | 248,507.71 |
| 1911 | 6,270.98 | leaving | 268,021.97 |
| 1912 | 8,986.00 | leaving | 273,175.93 |

To these last amounts should be added the residuals produced and rebates deducted at lines 1606-14 in the Company's operating reports for the respective years the amounts of which will be found below. (See the above Exhibits "26" to "30," inclusive). The years 1911 and 1912 are corrected for the amounts shown in the corresponding years of Mr. H. I. Lea's Exhibit "B" because of an error in computation of residuals for those years. This gives the gross earnings:

| Year | Residuals | Rebates | Corrected Gross Earnings |
|---|---|---|---|
| 1907 | $22,702.13 | $1,238.50 | $239,716.83 |
| 1908 | 19,272.05 | 1,243.98 | 253,308.96 |
| 1909 | 9,389.14 | 1,073.95 | 254,338.25 |
| 1910 | 2,737.71 | 1,524.56 | 252,759.98 |
| 1911 | 1,168.58 | 1,177.93 | 270,368.48 |
| 1912 | 597.49 | 933.56 | 274,706.98 |

It will be noted here that we follow the method outlined by Mr. Lea in his treatment of the revenues of the complainant (see Exhibit "7-P," p. 1386, P. R.), and eliminate the receipts from the territory outside of the city.

In addition to the above revenues the Company receives rent from two pieces of real estate, one of which is near the manufacturing plant and the other near the district holder at Thirty-third and X streets. Also the Company receives items of interest on bank balances and on notes due the Company (see p. 758). None of this interest or rent is reflected in the gross receipts as shown in the testimony in this record. Also the Company receives rentals on certain gas appliances which are included by Mr. Lea in working capital and the complainant's distribution system. None of this revenue is reflected anywhere in the Company's receipts and rightly so as we believe, but by the same token, the property charged into the complainant's capital account as an investment in these appliances loaned should be eliminated from any valuation upon which the public is required to pay a return, but this the master did not do.

The following table shows the gross earnings as corrected, the reported operating expenses, and the net earnings, resulting from deducting the expenses from the corrected gross earnings. It is to be borne in mind that these corrected net earnings are the result of correcting the gross earnings as the company's expert, Henry I. Lea, has done, and deducting therefrom the full amount of the operating expenses reported by the company for each year. As we shall show later these reported operating expenses include many items of expense, such as occupation taxes, excessive salaries, etc., and that the net income shown in this table would be much greater if the operating expenses were reduced by the elimination of improper items.

TABLE OF CORRECTED GROSS EARNINGS, REPORTED OPERATING EXPENSE, AND CORRECTED NET EARNINGS FOR THE YEARS 1907 to 1912 INCLUSIVE.

| | Corrected Gross Earnings | Reported Operating Expenses | Corrected Net Earnings |
|---|---|---|---|
| 1907 | $239,716.83 | $144,924.37 | $ 94,792.46 |
| 1908 | 253,308.96 | 137,090.35 | 116,218.61 |
| 1909 | 254,338.25 | 134,708.24 | 119,630.01 |
| 1910 | 252,759.98 | 143,670.45 | 109,089.53 |
| 1911 | 270,368.48 | 158,374.11 | 111,994.37 |
| 1912 | 274,706.98 | 175,573.49 | 99,133.49 |

### 14. Operating Expense.

We have already discussed the value of complainant's property as found by the master and the gross income of the company as shown by the records. We now come to the operating expenses. If rate regulation is to be effective at all it is necessary that the operating expenses shall be kept within proper limits. In the following discussion we shall consider:

First: The operating expenses as reported by the company, and,

Second: Deductions which we contend should be made of (a) excessive items, and (b) improper items.

## FIRST.

## EXPENSES AS REPORTED BY THE COMPANY.

It would extend this brief to unwarranted length were we to set out herein all of the various items of operating expense shown by the annual reports of the company.

At the top of page 1591 of the printed record will be found exhibit "339" which shows the gross income, operating expense and net income of the company for the years 1905 to 1912, inclusive, as reported by the company. That table includes in the first column receipts from gas sold within the city of Lincoln only, but does not include any receipts from gas sold in the suburban cities; the column of expense, however, includes all expense. The next table on the same page is exhibit "340" and was prepared by Alton D. Adams, the city's expert, for the purpose of separating the expense chargeable to the suburban service from the total expense so as to show the proper expense chargeable to the Lincoln service. These exhibits are explained by Mr. Adams on page 984, volume 3, printed record.

The annual gas reports of complainant for the years 1908 to 1912, inclusive, will be found opposite page 1716, volume 5, of the printed record, and are exhibit numbers "26," "27," "28," "29" and "30" respectively.

The master's discussion of the operating expenses will be found beginning on page 48 of volume 1, of the printed record. While the master recognized that a very large number of the items included by the company in the operating expenses were improper and excessive, he did not, in arriving at his conclusion as to the rate, eliminate any of them except the $3,000 salary of Henry L. Doherty, as president of the board of directors, the $600 salary of C. A. Frueauff as New York attorney, and reduced the amount to be spent for promoting new business from nearly $20,000, as the company had it, to $12,000 per year. All of the extravagant items which we shall hereafter point out, and the occupation taxes of $4,466 for the year 1907, which our supreme court has since held to be void and uncollectible, and for the year 1912, $8,195 which our supreme court has held in abeyance until the termination of this litigation, and the expense of

this litigation were all allowed and included by the master in the operating expenses, with the exception of Doherty's salary, the salary of C. A. Frueauff, and the deduction from the new business item to which we have already referred to. The master, however, did not recognize all of the items which we have criticized as legitimate items of expense, but he permitted them to remain just as the company reported them because he found the rate to be valid without their elimination. His comment as to the operating expenses as found, beginning on page 49, is quite suggestive. He says:

> "These figures without much scrutiny show the extent to which the validity of a rate ordinance depends upon individual will, if the right to determine what amount shall be expended in the campaign for new business or for any other purpose in a particular year is committed to the unrestrained discretion of the owner of the utility affected by the ordinance. That full discretionary power to transfer earnings into operating expenses cannot exist consistently with the right to regulate rates seems self-evident. Reasonable expenditures to stimulate business are usual and proper, but an expenditure of between $19,000 and $20,000 in one year, which brings in, as increased revenue, less than $5,000 would seem to be, under normal conditions, excessive, and when it may perhaps become a decisive factor in determining the constitutionality of rate legislation is so extraordinary as to arrest attention and excite inquiry at once. The present litigation was pending; the demand for rate reduction was insistent; the controversy between the public and the company has become acute; the company was about to have its property inventoried and appraised for the purpose of showing that there was an unjust disproportion between its value and its net earnings; in this state of affairs unusual caution and concertative action was, it seems to me, the company's obvious and paramount duty; and yet I cannot discover, either in this particular expenditure or in any other, evidence of a disposition on its part, by judicious retrenchment of expenses or wise economy of any kind to adjust itself to the conditions created by the ordinance reducing rates. It may be the company thought such adjustment was not possible,

but whatever reason controlled its conduct, I cannot regard the expenditure for new business as having been reasonably or prudently made or one that ought, in its entirety, to be allowed or taken into account in testing the enforcibility of the ordinance for 1912. In the exercise of ordinary business prudence and giving due consideration to the rights and interests of the vast consuming public, I think the company should not have expended in its campaign for new business more than $12,000, and that is what I have, for the purpose of this litigation, decided to allow. Reasonable limitations of expenditures must, in cases of this kind, be imposed by the courts or else the power to invalidate legislation regulating rates will pass inevitably from the public authorities into the hands of the owners of public utilities."

Beginning at the bottom of page 50 concerning executive salaries and other extravagant items of expense, the master said:

"The executive salaries, in comparison with those paid by other utilities producing and selling about the same amount of gas, are apparently excessive. I cannot believe the total expenditure for this purpose would have been, under the circumstances disclosed by the record, considered reasonably necessary had the business been prudently conducted with a view to making the cost of gas to consumers as low as good service and fair return upon the capital invested would justify. The operation of a public utility is a business within the scope of government. The company's plant is affected by a public use; the company has, in a qualified sense, taken upon itself, a governmental function, and is, therefore, bound in the conduct of its business to scrupulously regard the rights of the public equally with its own. A majority of the stock of the Lincoln Gas & Electric Light Company is owned and controlled by Henry L. Doherty & Company of New York, a co-partnership engaged in banking and manufacturing and controlling, through stock ownership, over 100 utilities—gas, water, electric and transportation—which it operates in practically the same manner as it does the Lincoln plant. Frank Frueauff became president of the Lincoln company in 1911 at a salary of $2,400 a year and at the

same time—at a time when an increase of operating expenses might be doubly advantageous to him—Henry L. Doherty became president of the board of directors at a salary, newly created, of $3,000 a year. Prior to 1911 Mr. Doherty was president of the company and Mr. Frueauff, as vice-president, performed, without compensation, the same services for which he now receives $2,400. Mr. Frueauff visits Lincoln six or eight times a year; Mr. Doherty, as far as the record discloses, does not come at all. Mr. B. C. Adams, an exceptionally efficient and capable man having a thorough technical and general knowledge of the gas business, is local manager at a salary of $3,600 per year. Of the 108 properties under the supervision of Henry L. Doherty & Company only three or four in addition to the Lincoln plant pay Mr. Frueaug a salary. Whether Mr. Doherty receives a salary in any of them does not appear. Conceding that the Lincoln company may receive prestige as well as financial, educational and other advantages from its connection with Henry L. Doherty & Company, I nevertheless think that the items of $3,000 for salary to the president of the board of directors should, for the purposes of this case, be disallowed. Mr. C. A. Frueauff, a brother of the president, engaged in the practice of law in New York City, receives from the Lincoln company an annual salary of $600, which is charged up as a part of the operating expenses. I think this expenditure, on the evidence given with respect to it, ought not to be allowed or taken into account in the decision of this case. In view of the fact that the company has, in its employ at Lincoln, a lawyer—one of the most capable and eminent in the profession—at a salary of $3,000 a year, it can hardly be reckoned reasonably necessary or prudent and provident management to incur this extra legal expense, especially at a time when it was claimed that compensatory earnings, measured by the dollar rate, were not coming in."

Beginning at the bottom of page 53 of the printed record, the master refers to a certain "free-list" which was maintained by the company whereby it gave gas and electric service to certain prominent and influential citizens (some of them its witnesses as to suitable net earnings in this community) free of charge, and he also refers to certain other

extravagances in the way of donations which are reflected in the company's reported operating expenses. He says:

> "I do not go into the accounts for the years between 1907 and 1912 as the calculations made by Mr. Lea show beyond question that the net income was, for each of these years, from 50% to 100% greater than in 1907. In these intervening years, there are various expenditures growing out of the present litigation which should, if necessary to sustain the ordinance, be deducted from the operation expenses. There are also many items of incidental expense that should be similarly dealt with. These later items are not large in the aggregate and there is small likelihood that they would affect the result in any possible revision of these findings. I, therefore, do not consider them in detail. It may not be out of place, however, to remark that in my judgment a utility corporation engaged as it is in carrying on a public business is bound to be prudent and circumspect in the use of its revenues. It seems hardly consistent with sound principle for such a corporation to maintain a free list or to make expenditures for social or fraternal purposes, or even for the advancement of education, morality, charity or religion, and then lay the burden of its munificence upon non-consenting rate payers. The practice of any cardinal virtue is, of course, wholesome and worthy of all commendation, but when indulged in by corporations it ought in reason to be, as in the case of individuals, at their own cost."

The burden was upon the complainant to show fully and fairly the amount of operating expenses justly and legitimately chargeable to the gas department in the Lincoln service. This corporation not only manufactures and sells gas, but it manufactures and sells electricity. It not only sells these commodities within the corporate limits of the city of Lincoln, but it sells both commodities in suburban cities and distributes them from its Lincoln plant. A very large part of the expense of the corporation is common to both the gas and electrical departments, not only within the city, but to such service as it renders to suburban cities. Complainant attacked this gas rate ordinance before it went

into effect, upon the theory that if the rate went into effect it would result in confiscating its property. Having attacked the rate in advance of a practical test, it assumed the heavy burden, imposed by the rule of this court established in similar cases, of showing beyond all just and fair doubt that confiscation would result if the new rate were permitted to go into effect.

Yet the company has not undertaken to separate the expenses incident to the suburban service from the expenses incident to the Lincoln service. Indeed, it has included all of the property of its gas department whether within or without the city limits, as property upon which it is entitled to a fair return. It has made separate statements of what the cost of its "output expenses" for the suburban business is. No capital charge, however, is made against the suburban business and that business is not made to carry any of the burden of the company's capital invested in the Lincoln manufacturing and distributing plant. Nor is the suburban business charged, as we understand it, with any of the general expenses of operating the company. As we understand it, in the "output expenses" charged to the suburban business in Mr. Lea's report, he has included merely the cost of the labor and materials entering into the manufacturing of gas used in the suburban service and certain expenses incurred at Havelock and University Place in handling the business there. The expense of the East Lincoln holder which was constructed primarily to furnish pressure for the suburban service is borne entirely by the Lincoln plant and no part of the burden is thrown upon the suburban service. The Lincoln plant has not only to manufacture gas, but has to convey it to the city limits free of expense so far as any capital charge is concerned. Nor has the company furnished any basis for apportioning the correct proportion of the capital charge to the suburban service.

As to common expenses incurred jointly in the operation of the gas and electric departments, there is no basis furnished in the evidence to enable the court to make a division unless it be upon the basis of the relative number of consumers in the two departments, or upon the basis of relative earnings of the two departments. These matters we will discuss later.

A public service corporation, when it attacks a rate established by lawful authority, must make a full and fair showing, not only as to its property and income, but, also as to its operating expenses, because the right to regulate the rate necessarily implies the right to control the operating expenses.

In the case of *State* v. *Adams Express Company*, 122 N. W. 691, the supreme court of Nebraska, in the second section of the syllabus, says:

> "When an attempt is made to strike down a rate statute, it is incumbent on the attacking party to make full, fair, and complete disclosure of all of the revenue derived from the business, and the disbursements of the same for all purposes, including salaries paid to all of its officers, agents, and employees, so that it may be determined whether such salaries and expenditures are necessary as well as reasonable in amount."

In support of the above doctrine, in the body of the opinion, Judge Barnes, speaking for the court, quoted from Mr. Justice Brewer in the case of *Chicago & Grand Trunk Ry. Co.* v. *Wellman*, 143 U. S. 339, 36 L. Ed. 176, as follows:

> "Surely, before the courts are called upon to adjudge an act of the legislature fixing the maximum passenger rates for railroad companies to be unconstitutional, on the ground that its enforcement would prevent the stockholders from receiving any dividends on their investment, or the bondholders any interest on their loans, they should be fully advised as to what is done with the receipts and earnings of the company; for, if so advised, it might clearly appear that a prudent and honest management would, within the prescribed rates, secure

to the bondholders their interest, and to the stockholders reasonable dividends. While the protection of vested rights of property is a supreme duty of the courts, it has not come to this that the legislative power rests subservient to the discretion of any railroad corporation, which may, by exorbitant and unreasonable salaries, or in some other improper way, transfer its earnings into what it is pleased to call 'operating expenses' * * * The silence of the record gives us no information, and we have no knowledge outside thereof and no suspicion of wrong. Our suggestion is only to indicate how easily courts may be misled into doing grievous wrong to the public, and how careful they should be not to declare legislative acts unconstitutional upon agreed and general legislative acts unconstitutional upon any general statements, and without the fullest disclosure of all material facts."

The importance of the doctrine above announced is made manifest, in a very striking manner, by the history of the division of the general expenses by this company between the gas and electric departments. At the time of the former trial such of these general expenses as were not divided equally between the two departments were divided on the basis of two-thirds to gas and one-third to electricity and the division was made on the investment basis, the assumption being that the property of the electric department was about one-third as valuable as that of the gas department (see p. 137, printed record, and 768-9 where it is shown that executive salaries, payroll and legal expense were divided equally, prior to May, 1908).

Since the former trial, however, and beginning May, 1908, the company has seen fit, arbitrarily, to change the method of apportionment so that now all of the general expenses, except taxes, are divided on the basis of 20 per cent to electricity and 80 per cent to gas, not on the investment basis as before, but on the basis of consumers, and even this basis is not exactly followed and Mr. Phillips testified that

it would be nearer 75 per cent to gas and 25 per cent to electricity (p. 759). But Exhibit "101," prepared by the company (p. 1849) shows the ratio of consumers in 1912 to be 73 per cent and 27 per cent. There is no reasonable and adequate explanation for this eccentric and capricious conduct and the only fair inference to be drawn is that such a division throws the burden of this expense upon the gas department, where it will do the most good to the company in its effort to defeat this rate. (As to the present method of making this division, and as to when it began, see pp. 768-9).

Not only has the ratio of apportionment between the two departments been thus manipulated against the public during the pendency of this suit, but the general expenses have very greatly and substantially increased without any satisfactory explanation as to the reason. Not only has the actual increase in dollars been very substantial, but the general expenses referred to per thousand cubic feet of gas sold have very greatly and substantially increased in spite of the increased output. Of course, with the increased output, we should expect the actual expenses to increase, but that is quite a different thing from an increase per unit of gas sold. When reduced to the unit of gas sold, then certainly we should expect the general expenses to decline per unit as the output increases. After all, the real test is the cost per unit. There is no other way of making comparisons that will disclose, in anything like a convincing manner, whether or not the general expenses at a given time bear any just relation to the volume of business done. Before we proceed to discuss the expenses incident to the operation of the plant, aside from the cost of manufacturing the gas, we will call attention to the cost of manufacturing gas for the past few years as disclosed by the reports of the company. There are a number of intimations in the old record, and some in

the new, implying that it costs a great deal more to manufacture gas here than elsewhere because of the distance from Lincoln to the field of supplies for gas-making material, and that the cost has increased lately by reason of the advance in the price of certain gas-making materials, particularly oil for enriching the gas. As to the location of Lincoln, it is to be remembered that if it were true that the cost of making gas were substantially enhanced by reason of the distance from the oil fields and supplies of coke, used in the manufacture of gas, and coal for making steam, still, as against this, we urge that a situation of that kind would make this city a better field for the sale of fuel gas, and this would offset, or more than offset, any disadvantage resulting from such location. But it is not true that Lincoln is unfavorably located in the matter of gas making materials. Steam coal, for the manufacturing of steam, can be, and is, procured at the coal fields of Iowa, Missouri, Kansas and Colorado; coke can be procured from Denver, Chicago or Milwaukee; oil can be, and is, procured from the Kansas oil fields. This plant is not making coal gas and the distance from the Pennsylvania coal fields is a matter of no consequence here. As far as steam coal, coke and oil are concerned, we are practically as favorably located as any of the cities of this size in the country, and much more favorably situated than many where gas rates are $1.00 and less. For instance, in the matter of water gas, what advantage over Lincoln has Cedar Rapids or Des Moines, Iowa? In these last named cities the gas rate is 90 cents per thousand cubic feet, and the rate has been upheld. We also believe that Lincoln is as near to steam coal and oil as most of the cities of the east, and certainly the situation is as favorable, as to gas making materials, as any of the towns of Massachusetts. In this connection, we call attention to Mr. Adams' Exhibit "393," printed record 1616, with his explanation of it, beginning on page 3356. It will be noticed that Lincoln,

Haverhill and Fall River are the only cities included in the exhibit where nothing but water gas is made. The generator fuel for Lincoln in 1907 was $5.50, in 1912 it was $5.44 in Haverhill in 1912 it was $5.84, and in Fall River in 1912 it was $5.92. So that, of the three cities shown on this exhibit where water gas alone is manufactured, Lincoln seems to be getting its generator fuel cheaper than the other two. And Mr. Adams introduced Exhibit "432," printed record 1632, showing the cost of coal and oil in gas plants in seventy-two cities of Massachusetts, during 1912, as per Brown's Directory. Brown's Directory is a publication used by gas companies and gas engineers all over the country, and containing accurate gas statistics. This table shows the coal cost per ton, oil cost per gallon, and the candle power and heat units of the gas manufactured in these several cities. According to this table, the coal and oil prices in those cities in Massachusetts average about the same as the Lincoln prices. The price paid for oil by this company, according to the 1912 annual report, averaged 3.15 cents per gallon, which compares very favorably with Massachusetts prices, being higher than some and lower than others. The gas rate in Haverhill is 85 cents and in Fall River 80 cents, as against $1.20 in the city of Lincoln. In Fall River the gas sales in 1910 were 495,612 housand cubic feet, about double the sales in Lincoln, but in Haverhill for that year the sales were 203,360 thousand cubic feet, considerably less than the Lincoln sales in 1912 (Adams' Exhibit "391," printed record 1616). The difficulty with this gas plant does not lie in the price of gas making materials nor in the cost of gas making labor. This is clearly demonstrated by an examination of a part of Mr. Lea's Exhibit "7-L-6," printed record 1352, showing the manufacturing department expenses of water gas. This table covers all expenses of manufacturing water gas for the years 1903-1912, inclusive, and we here reproduce the table:

## EXHIBIT "7-L-6." (PRINTED RECORD VOL. 4, P. 1356).

### MANUFACTURING DEPARTMENT EXPENSE—WATER GAS.

(Per M. Cu. Ft. Made.)

| Year ending December 31st | 1903 | 1904 | 1905 | 1906 | 1907 | 1908 | 1909 | 1910 | 1911 | 1912 |
|---|---|---|---|---|---|---|---|---|---|---|
| Steam for generating water gas | $.0286 | $.0245 | $.0353 | $.0356 | $.0315 | $.0221 | $.0112 | $.0133 | $.0176 | $.0151 |
| Generator fuel | .1094 | .1055 | .1176 | .1212 | .1090 | .1037 | .1333 | .1155 | .1064 | .1100 |

| Total cost purification and storage | .0622 | .0558 | .0578 | .0642 | .0702 | .0680 | .0677 | .0755 | .0862 | .0865 |
| Total cost water gas in holder | $.4889 | $.4746 | $.4095 | $.4195 | $.3951 | $.3577 | $.3398 | $.3148 | $.3039 | $.3288 |

The foregoing table of Mr. Lea, the company's expert, taken from the annual reports of the company, makes it clear that the unit cost of manufacturing gas and storing it in the holder has, on nearly every item, declined during the years covered. The cost of steam has declined per unit, notwithstanding it is sold by the electric department to the gas department, at a price arbitrarily fixed by the company. Generator fuel (coke) was a little higher per unit of gas in 1912 than in some of the previous years, but it was lower than in others. In 1903-4-7-8-11 coke was slightly lower than in 1912, while on the other hand, in 1905-6-9-10 it was substantially higher, but the cost of coal and the cost of steam combined did not equal the oil cost in the manufacture of water gas, as may be seen by a glance at the first three items in this table. The apparent increase in the net cost of generating water gas for 1912 over the two preceding years may be fully accounted for by Mr. Lea's correction of the residual account, (see p. 764) and Mr. Phillips' correction of the alleged coal shortage (see p. 761). Beginning in 1903, the cost of oil per cubic foot of gas gradually declined from $.2755 in 1903 to $.1081 in 1912, so that this company has not been embarrassed by the increase in the price of oil so as to render that element in manufacturing gas an obstacle to the reduction of rates. The three elements just considered, steam, coke and oil, constitute all the gas making material. Mr. Lea gives us his figures on the total of gas making materials per thousand cubic feet of gas so that by combining all these elements, the unit cost of making gas, so far as the materials are concerned, has materially declined from 1903 to 1912, as follows:

Total gas making material per thousand cubic feet for:

| | | | |
|---|---|---|---|
| 1903..... | $.4125 | 1908..... | $.2664 |
| 1904..... | .3938 | 1909..... | .2554 |
| 1905..... | .3151 | 1910..... | .2298 |
| 1906..... | .3093 | 1911..... | .2154 |
| 1907..... | .2956 | 1912..... | .2332 |

These are Mr. Lea's figures from the company's own reports, and they show that the total material expense for making a thousand cubic feet of gas in 1907 was $.2956, with a gradual and almost uniform decline down to 1912, when it was $.2332, a drop of over six cents on the material expense alone of making a thousand cubic feet of gas. And we call attention to the fact that this law suit involved a controversy over 20 cents per thousand cubic feet of gas, and the company has saved enough since the ordinance was passed on the material cost of making a thousand cubic feet of gas alone to compensate for substantially one-third of the difference between the old rate and the new.

And if we compare 1912 to 1903 we find that the cost of the material for making water gas in 1903 was $.4017, as against $.2204 in 1912, a saving of $.1813 on the material alone per thousand cubic feet of gas, substantially enough to compensate for the difference in the rate now in force and the one that ought to be put into effect.

We have prepared from the annual gas reports of the company (line 1101, opposite 1716 printed record), the following table showing that the increased output of gas has reduced the quantity of coke used per thousand cubic feet of gas sold and also the coke per thousand cubic feet. We have reduced the quantity to pounds per thousand cubic feet of gas sold and also coke sold to cents per thousand cubic feet of gas sold, for the years 1906 to 1912, inclusive:

| Year | Per M. Cu. Ft. Gas Sold Pounds Coke Used | Per M. Cu. Ft. Gas Sold Cents Coke Cost |
|---|---|---|
| 1906 | 34.2 | $.1212 |
| 1907 | 30.00 | .1090 |
| 1908 | 33.8 | .1037 |
| 1909 | 41.8 | .1333 |
| 1910 | 41.8 | .1155 |
| 1911 | 29.6 | .1064 |
| 1912 | 27.6 | .1100 |

The above table discloses that with the increased output of gas sold regardless of whether coke went up or down, the unit cost of coke per thousand cubic feet of gas sold gradually and substantially declined.

And we have also prepared from the same account (line 1102) shown in the annual reports of the company, 1906 to 1912, inclusive, a similar table as to the oil used in enriching water gas:

| Year | cu. ft. Gas Sold Gal. Oil. Per M. | cu. ft. Gas Sold Gal. Oil Per M. Price | cu. ft. Gas Sold Cost Per M. Cents Oil |
|---|---|---|---|
| 1906 | 2.81 | $.0408 | $.1525 |
| 1907 | 2.76 | .0420 | .1551 |
| 1908 | 3.11 | .0307 | .1406 |
| 1909 | 3.58 | .0302 | .1109 |
| 1910 | 3.95 | .0276 | .1010 |
| 1911 | 3.63 | .0270 | .0914 |
| 1912 | 3.63 | .0327 | .1081 |

The above table shows that the quantity of oil per thousand cubic feet of gas sold increased somewhat in 1908 and subsequent years over 1906 and 1907, but this increase was probably due to the fact that the city council passed an ordinance raising the standard of gas which required more oil,

and the enforcement of such standard resulted in an increased quantity of oil per thousand cubic feet of gas sold. This table discloses, however, that the actual price of oil per gallon has declined during these years. For example, it was $.0408 per gallon in 1906 and $.0327 in 1912. And, notwithstanding the increased quantity of oil used per unit of gas, the reduction in the price of oil used per unit of gas, and the increased output of gas resulted in a substantial decrease in the oil cost per thousand cubic feet of gas during these years. For example, the oil per thousand cubic feet of gas sold in 1906 was $.1525, whereas in 1912 it had declined to $.1081, a reduction in the unit cost of oil, or a gain in oil alone per thousand cubic feet of gas of about 5 cents.

Now it was the contention at both trials, and no doubt will be the contention now, that it would be unfair to compare gas rates in Lincoln with gas rates in eastern cities, because of Lincoln's unfavorable location relative to gas making supplies. Mr. Lea's table, above referred to, demonstrates that that claim is without foundation, but on the contrary, that the unit cost of making gas, so far as the materials are concerned, has been going down until the company has saved from gas making materials alone between 1903 and 1912, practically enough to enable it to sell gas at one dollar now and make as much profit as it would have made in 1903 at $1.20. The fact is, as we have already said, Lincoln is as favorably located, as far as materials are concerned, as almost any town of its size in the country, and it certainly compares favorably with Cedar Rapids and Des Moines, Ia., where gas consumers are getting gas at 90 cents per thousand cubic feet, and with Haverhill and Fall River, Massachusetts, where the rate is 85 cents and 80 cents per thousand cubic feet of gas, respectively.

But how is it with labor in Lincoln? This same table of Mr. Lea's (Exhibit "7-L-6," p. 1356 P. R., ante p. 121) shows the labor cost per thousand cubic feet of gas, for the years dealt with as follows:

Total cost of labor per thousand cubic feet:

| | | |
|---|---|---|
| 1903.....$.0182 | 1907.....$.0281 | 1911.....$.0159 |
| 1904..... .0187 | 1908..... .0285 | 1912..... .0148 |
| 1905..... .0199 | 1909..... .0204 | |
| 1906..... .0253 | 1910..... .0174 | |

It will be seen that while the general trend of the gas unit labor cost in 1903 to 1909 inclusive was slightly upward, from that time to, and including 1912, the tendency has been substantially lower, so that, whereas, the gas unit labor cost for 1903 was $.0182, for 1912 it was $.0148, and the difficulty is not in the labor cost per unit.

Now, when you have the gas making materials and the gas making labor accounted for, and some small items of incidental expense in connection with the manufacture of gas, you have covered the total expense of the manufacture of gas, and this brings us now to Mr. Lea's total expense for generating water gas including both the labor and materials. He shows the totals for the years covered as follows:

| | | |
|---|---|---|
| 1903.....$.4267 | 1907.....$.2887 | 1911.....$.1989 |
| 1904..... .4188 | 1908..... .2544 | 1912..... .2204 |
| 1905..... .3516 | 1909..... .2435 | |
| 1906..... .3553 | 1910..... .2178 | |

Thus it will be seen that while the total expense of manufacturing the gas was a little higher per unit of gas in 1912, that in the two preceding years it was still substantially lower than in any of the other years and shows that, whereas, the total expense of manufacturing gas, including all labor and materials, in 1907 was, per thousand cubic feet of gas, $.2956, in 1912 it was $.2332, or a saving in the total

expense of manufacturing gas from the time this ordinance was passed down to the end of 1912 of $.0624, or substantially one-third of the difference between the rate involved in this suit and the old rate. If we compare the total unit cost of manufacturing gas in 1903 with the same total in 1912, we get the following result: In 1903 $.4267, in 1912 $.2423, or a saving of $.1844, or substantially the amount in controversy in this suit, on the cost of manufacturing gas alone.

In this same exhibit of Mr. Lea's (Exhibit "7-L-6") we find the total cost of water gas in the holder per thousand cubic feet of gas made for the years 1903 to 1912 to be as follows:

| | | |
|---|---|---|
| 1903.....$.4889 | 1907.....$.3951 | 1911.....$.3039 |
| 1904..... .4746 | 1908..... .3577 | 1912..... .3288 |
| 1905..... .4095 | 1909..... .3398 | |
| 1906..... .4195 | 1910..... .3148 | |

Thus it will be seen that the total cost of manufacturing gas and putting it in the holder ready for sale to consumers has substantially decreased between the years 1903 and 1912 per thousand cubic feet of gas. In 1907 the total cost of gas in the holder was $.3951 and in 1912 it was $.3288, or a saving per thousand cubic feet of $.0663 on the cost of gas in the holder, or practically one-third of the difference in the rates here involved. If we compare the total unit cost in 1912 with the total unit cost in 1903 we get the following result: In 1903 the total cost of gas in the holder per thousand cubic feet was $.4889, and in 1912 it was $.3288, or a saving of $.1601, or over 80 per cent of the twenty cents difference in the rates involved in this suit.

If there was anything in the contention that Lincoln is unfavorably situated for the economical manufacture of gas this would certainly manifest itself in the manufacturing

department, because, if the location unfavorably affected anything, it would be the gas making material and labor. Having shown, therefore, that the cost of gas in the holder, as shown by the company's own reports, has gone down per thousand cubic feet to a very substantial degree (over 80 per cent of the difference in the rate involved here) between 1903 and 1912, what is there left of the contention of the company that it is handicapped by Lincoln's unfavorable location? Certainly no point can be made that it costs more to distribute the gas in Lincoln than it does elsewhere so far as the mere cost of distribution is concerned. Of course, it will be argued that Lincoln is a scattered town, and that it has not the same number of consumers per mile of mains as many of the eastern cities where the population is more compact (a point which we shall discuss later), but aside from that, the cost of distribution cannot be substantially different in Lincoln from what it would be elsewhere. It was remarked, during the progress of the trial, that it costs more to read the meters here than in many other cities because the meters are farther apart and require a greater mileage of travel for the meter readers, but that certainly is a very trifling matter not worthy of consideration here, and would hardly have any appreciable effect in the cost of distributing the gas. And in this connection we call attention to Alton D. Adams' Exhibit "362," (P. R. 1595) giving a list of towns showing the sales per mile of main, and it will there appear that Lincoln is third in the list. So we contend that the trouble with this company is not in Lincoln's unfavorable location, because the location is not unfavorable. It is not in the cost of manufacturing and purifying gas and storing it in the holder, because it is shown by the company itself that the unit cost of gas in the holder has gradually tended downward and that there has been a substantial reduction in the unit cost of gas in the holder between 1903 and 1912, and also, between 1907 and 1912.

In that part of Mr. Lea's Exhibit "7-L-6" which deals with distribution, he gives us the total distribution expense, but we do not discover anything in these totals for the years 1903 to 1912, inclusive, indicating any serious handicap in the unit cost of distribution. For some reason not clear to us the cost of distribution has slightly increased between the years 1903 to 1912, but the increase has been very slight and we call attention to the fact that the years showing the greatest increase were the critical years during which this rate matter has been acute. These totals are as follows:

| | |
|---|---|
| 1903.....$.0893 | 1908.....$.0812 |
| 1904..... .0927 | 1909..... .0761 |
| 1905..... .1097 | 1910..... .0876 |
| 1906..... .1278 | 1911..... .0835 |
| 1907..... .1002 | 1912..... .1001 |

The distribution department expense for 1906 was $.1278, and for 1912 was $.1001 per thousand cubic feet, a substantial decline between those years. In 1907 the distribution expense per gas unit was slightly above that of 1912. So the difficulty, if there is any, has not come either from the unit cost of manufacturing or distributing gas. Where, then, does the trouble lie? And this brings us to the items of general expense incident to the operation of this plant, where we claim the principal part of the padding has been done. Now, one would naturally think that if there is any portion of the expense of operating a gas plant which would decline per unit of gas with an increasing output, it would be found to be more pronounced in the department having to do with the management of the company, than elsewhere. In other words, while we know that the increase in the output does decrease the total cost of gas in the holder, we would expect a very great decrease in the unit cost, especially when we come to consider the managing department of the company. The increase in the output of gas does not require more

than one president of the company, one vice-president, and one board of directors, and requires very little increase in the clerical department. The office rent and legal expense ought not to increase materially. And, therefore, in any well managed gas company, operated honestly and economically, and not controlled and operated by a non-resident plunder-bund for the purpose of absorbing the revenues in excessive salaries and other forms of individual profit, we should expect, and would undoubtedly find, substantial decline in the unit cost of gas in what is called by this company its executive department, and in the items of general expense. But what is the situation here?

We here direct attention to Mr. Lea's Exhibit "7-L-14," (p. 1356 R. R.) prepared from the annual reports of the company, being a table showing the cost of the executive department general expense per thousand cubic feet of gas sold for 1903 to 1912, inclusive.

EXECUTIVE DEPARTMENT—GENERAL EXPENSE—PER THOUSAND CUBIC FEET SOLD.

| Year ending December 31 | 1903 | 1904 | 1905 | 1906 | 1907 | 1908 | 1909 | 1910 | 1911 | 1912 |
|---|---|---|---|---|---|---|---|---|---|---|
| Executive salaries | .0353 | .0176 | .0170 | .0182 | .0179 | .0256 | .0299 | .0467 | .0416 | .0380 |
| General clerical salaries | .0091 | .0052 | .0034 | .0032 | .0022 | .0026 | .0037 | .0038 | .0047 | .0053 |
| General office expense | .0050 | .0038 | .0023 | .0022 | .0027 | .0034 | .0048 | .0046 | .0053 | .0050 |
| Incidental expense | .0213 | .0136 | .0113 | .0139 | .0096 | .0137 | .0182 | .0137 | .0227 | .0204 |
| Rent of executive offices | .0031 | .0033 | .0025 | .0032 | .0037 | .0037 | .0054 | .0071 | .0069 | .0074 |
| Legal expense | .0074 | .0071 | .0045 | .0049 | .0120 | .0092 | .0091 | .0281 | .0364 | .0339 |
| Total above items | .0812 | .0506 | .0410 | .0456 | .0481 | .0582 | .0711 | .1040 | .1176 | .1099 |
| Promoting new business | .0567 | .1396 | .1118 | .0874 | .0747 | .0596 | .0686 | .0769 | .0835 | .0840 |
| Taxes | .0371 | .0180 | .0147 | .0436 | .0395 | .0380 | .0391 | .0397 | .0466 | .0651 |
| Total general expense | .1750 | .2082 | .1665 | .1766 | .1623 | .1558 | .1788 | .2206 | .2477 | .2590 |

Take the item of executive salaries, for the years 1905 to 1912, inclusive. This item entered into the cost of each thousand feet of gas as follows:

| | | | |
|---|---|---|---|
| 1905..... | $.0169 | 1909..... | $.0299 |
| 1906..... | .0182 | 1910..... | .0467 |
| 1907..... | .0179 | 1911..... | .0416 |
| 1908..... | .0256 | 1912..... | .0380 |

Thus it will be seen that executive salaries have gone up per thousand cubic feet of gas instead of going down, as we should naturally expect, and this item alone, between the years 1905 to 1912, has doubled per unit of gas. And let us make the comparison with the year 1907—the year when the dollar gas rate was to go into effect. Executive salaries in 1907 per each thousand cubic feet of gas were $.0179, whereas in 1912, notwithstanding the claim of the company that it was hard up and was being harassed by the public and could not afford to reduce the price of gas, executive salaries went cheerfully up, so that in that year it was $.0380 per thousand cubic feet of gas, or more than double what it was in 1907.

Again we wish to remind the court that this law suit involves but 20 cents per thousand cubic feet, and we are speaking here with reference to cents per thousand cubic feet of gas when we deal with these items of general expense. In other words, if we can point out where this company can save, and ought to save, in its operating expenses 20 cents per thousand cubic feet of gas sold, we ought to win this suit, wholly regardless of which line of testimony may be accepted as to the value of the property.

We wish to call attention here to line 1503 in the annual reports, "incidental expenses." (Ex. 26 to 30 inc., p. 1716 P. R.). Now the incidental expenses of this company ought

not to increase per unit of gas with the increasing output. In fact, it ought to substantially decrease, yet the item of "incidental expense" entered into the unit cost of gas between 1905 and 1912 as follows:

| | | | |
|---|---|---|---|
| 1905..... | $.0114 | 1909..... | $.0182 |
| 1906..... | .0139 | 1910..... | .0137 |
| 1907..... | .0096 | 1911..... | .0227 |
| 1908..... | .0137 | 1912..... | .0204 |

So that the item in 1912 entered into each thousand cubic feet of gas about double what it was in 1905, not in dollars, *but in cents per thousand cubic feet of gas sold.*

At line 1505 of said annual reports is shown the unit cost of legal expense, that is, the number of cents entering into each thousand cubic feet of gas, which represents the legal expense of the company. This item for the years 1905 to 1912, inclusive, runs thus:

| | | | |
|---|---|---|---|
| 1905..... | $.0045 | 1909..... | $.0091 |
| 1906..... | .0049 | 1910..... | .0289 |
| 1907..... | .0120 | 1911..... | .0364 |
| 1908..... | .0092 | 1912..... | .0339 |

This shows an increase in the "legal expenses" entering into each thousand cubic feet of gas in 1912 over 1905 of $.0294, or more than seven times what it was in 1905.

Line 1507 of said annual reports shows the item of "promoting new business." The actual annual expense of this item has somewhat increased during these years, but the unit cost has declined slightly. We contend now, and we shall take the matter up more extensively later, that this item should be largely eliminated from the operating expenses for the reason that this company has a monopoly in the gas business and there is no necessity for spending substantially $20,000 per year to advertise and promote the sale of a commodity that cannot be purchased elsewhere.

The item of "taxes" per unit has increased during these years and this we should expect as actual taxes have increased greatly. The company was not paying enough taxes to start with, and it is but right that its taxes should increase, and, besides, the taxes of everyone else during the same years upon a given piece of property have very substantially increased.

Line 1509 of said annual reports shows the total "general expense" entering into each thousand cubic feet of gas. The item of taxes should be eliminated in order that the full effect of this table should appear because the taxes are not under the control of the company and they are a substantial item and have increased per unit during these years sufficiently to break the full force of this table, but notwithstanding that fact and including the taxes with these totals, we see that between the years 1905 and 1912 the total general expense of the company per thousand cubic feet of gas has almost doubled, and if the item of taxes were eliminated, this item of general expense, as it entered into each thousand cubic feet of gas, would be shown to be more than double in 1912 what it was in 1905, whereas the contrary ought to be the normal situation. The total general expenses, including the taxes for these years per thousand cubic feet of gas are as follows:

| | | | |
|---|---|---|---|
| 1905..... | $.1673 | 1909..... | $.1788 |
| 1906..... | .1766 | 1910..... | .2206 |
| 1907..... | .1623 | 1911..... | .2477 |
| 1098..... | .1558 | 1912..... | .2590 |

By turning to Exhibit "272," p. 1475, vol. 4 of the printed record, it will be seen that the gas sold by the Company in 1905 was 143,690 cubic feet. The report of the Company for 1912 (Exhibit "30," p. 1716, printed record) shows the sales to 234,386 M cubic feet. The increase of sales of 1912 over

1905 was 90,695 M cubic feet, or about 63 per cent, and yet, instead of these general expenses going down per unit, as ought to have been the case, they have increased per unit about 55 per cent over 1905. In other words, the output has increased about 63 per cent, and this general expense, instead of going down, has increased over 1905 about 55 per cent, per unit.

Mr. Adams prepared a table from the sworn returns to the Massachusetts gas commission of a number of towns in Massachusetts, fairly comparable with Lincoln, for the purpose of making comparison between the unit cost per thousand cubic feet of gas of all expenses of these companies except gas making material and labor, repairs, renewals and taxes, with the same expenses of the Lincoln company. In order that the comparison might be fair, and include as nearly as possible, the exact items of expense upon which the comparison is made, he eliminated from his table all such items as would be likely to be affected by locality (see his explanation, p. 992, vol. 3, printed record). After eliminating all of gas making materials and labor, and all repairs, renewals and taxes from the Massachusetts plants referred to in this table, he reduced the remaining expenses to cents per thousand cubic feet of gas sold in order to enable us to make comparisons with the same expense in the Lincoln company per thousand cubic feet of gas sold, after eliminating the same items here (see Exhibit "281," p. 1481, vol. 4, printed record). The table referred to is Adams' Exhibit "349," p. 1595, vol. 5, printed record, and is as follows:

(Exhibit "349," p. 1595, vol. 5, printed record)

ALL EXPENSES EXCEPT MATERIALS AND LABOR MAKING GAS, REPAIRS, RENEWALS AND TAXES FOR PLANTS SELLING 100 TO 300 MILLION FEET OF GAS ANNUALLY PER SWORN RETURNS TO THE MASSACHUSETTS GAS COMMISSIONERS.

CENTS PER THOUSAND FEET GAS SOLD.

| City | Year | M. Feet Gas Sold | Total Above Expense |
|---|---|---|---|
| Haverhill | 1902 | 123,887 | 10.64 |
| Tauton | 1912 | 216,482 | 14.11 |
| Tauton | 1913 | 136,492 | 13.17 |
| Haverhill | 1903 | 153,068 | 10.36 |
| Haverhill | 1904 | 160,863 | 9.08 |
| Haverhill | 1905 | 165,483 | 10.08 |
| Haverhill | 1906 | 170,759 | 10.44 |
| Charlestown | 1904 | 179,798 | 12.16 |
| Charlestown | 1903 | 181,733 | 12.28 |
| Haverhill | 1907 | 182,359 | 12.27 |
| Charlestown | 1905 | 182,705 | 12.10 |
| Lynn | 1901 | 197,189 | 9.13 |
| Charlestown | 1907 | 210,863 | 11.90 |
| Lynn | 1902 | 224,514 | 8.76 |
| Charlestown | 1908 | 228,126 | 11.92 |
| Charlestown | 1909 | 230,580 | 12.77 |
| Lawrence | 1903 | 236,808 | 12.02 |
| Charlestown | 1910 | 238,229 | 11.40 |
| Charlestown | 1911 | 255,288 | 11.28 |
| Charlestown | 1912 | 266,869 | 10.25 |
| Cambridge | 1912 | 276,284 | 11.83 |
| Lynn | 1903 | 282,578 | 8.37 |

In order to contrast the expenses set out in cents per thousand cubic feet of gas sold as shown in the foregoing table for said Massachusetts companies we here print Adams' Exhibit "303," p. 1473, vol. 4, being a table for the Lincoln company showing the thousand feet of gas sold in each year from 1903 to 1912, inclusive, the salaries and office expenses for each year in cents per thousand cubic feet sold, distribution and general expenses per thousand cubic feet sold, and, in the last column the total of said expenses in cents per thou-

sand cubic feet sold in each year, said last column corresponding to the last column in the preceding table for the Massachusetts companies:

Lincoln Gas & Electric Light Co.

ALL EXPENSES EXCEPT MATERIALS AND LABOR MAKING GAS, REPAIRS, RENEWALS AND TAXES

IN CENTS PER THOUSAND FEET OF GAS SOLD.

(Adams' Exhibit "303," bot. p. 1494, vol. 5, printed record)

| Year | M. Feet Gas Sold | Salaries and Office Expense | Distribution and Gen. Expense | Total Above Expense |
|---|---|---|---|---|
| 1903 | 98,343 | 15.89 | 6.13 | 22.02 |
| 1904 | 117,429 | 22.20 | 4.83 | 27.03 |
| 1905 | 143,690 | 18.83 | 4.26 | 23.10 |
| 1906 | 153,663 | 17.00 | 4.42 | 21.41 |
| 1907 | 179,366 | 15.94 | 4.64 | 20.58 |
| 1908 | 195,391 | 15.48 | 5.02 | 20.51 |
| 1909 | 204,284 | 16.72 | 6.21 | 22.93 |
| 1910 | 210,169 | 19.81 | 8.23 | 28.04 |
| 1911 | 227,268 | 20.12 | 10.55 | 30.66 |
| 1912 | 234,386 | 19.85 | 11.27 | 31.12 |

Mr. Adams' Exhibits "350" and "351" (p. 1596, vol. 5, printed record) deal with the town of Cambridge, Massachusetts, showing the salaries and office expense and the distribution and general expense, excluding gas making labor and material, repairs, renewals and taxes. The last column shows in cents per thousand cubic feet of gas sold the extent to which these general expenses enter into the cost of gas sold in Cambridge, and it will be seen that the percentage from 1900 to 1912, runs from eleven to twelve cents per thousand. Excluding the same items from the general expense of the Lincoln plant the remaining general expense in 1912 per thousand cubic feet of gas sold was 31.12 cents (see Mr. Adams' Exhibits "290," p. 1490, vol. 4, and "303," p. 1494, vol. 5).

Mr. Adams' Exhibits "352" and "353" (p. 1597, vol. 5) deal with the gas plant at Charlestown, Massachusetts, in the same manner and it will be seen that the general expense per thousand cubic feet of gas in 1900 was 21.91 cents and that it ran down to 10.25 cents in 1912, as against 31.12 cents here.

Mr. Adams' Exhibits "354" and "355" (p. 1598, vol. 5) deal with the gas plant at Lawrence, Massachusetts, in the same manner and show that in 1900 the general expense of that company included in Mr. Adams' statement, was 22.56 cents and that it declined gradually and was 12.10 cents in 1912, as against 31.12 cents here.

Mr. Adams' Exhibits "356" and "357" (p. 1599, vol. 5) treat in a similar manner the operations of the gas plant at Lynn, Massachusetts, and it will be seen that while there was a slight increase per thousand, the unit cost of these general expenses per thousand feet of gas was only 9.90 cents in 1912, as against 31.12 cents here.

Mr. Adams' Exhibits "358" and "359" (p. 1600, vol. 5) deal in a similar manner with the Taunton gas plant, and show that the unit cost of these general expenses per thousand cubic feet of gas sold in 1900 was 17.01 cents, and in 1913 it was 13.17 cents, as against 31.12 cents here.

Mr. Adams' Exhibits "360" and "361" (p. 1601, vol. 5) deal in a similar manner with the gas plant at Haverhill, Massachusetts, showing the cost per thousand cubic feet of these general expenses, and that it was 12.27 cents in 1912, as against 31.12 cents here.

When these Massachusetts tables were produced and testified to by Mr. Adams, the ompany's expert and counsel fully appreciated their significance and they made a desperate assault upon Mr. Adams and his Massachusetts data, and

Mr. Lea went all the way to Massachusetts and spent considerable time, and caused an adjournment of this case for the purpose of investigating the Massachusetts records and procuring the means of discrediting the testimony of Mr. Adams, and his Massachusetts tables. And Mr. Lea seems to have returned imbued with the idea that he had the necessary means of completely discrediting Mr. Adams, and he took the stand for the purpose of doing so. And he undertook to satisfy the master that Mr. Adams, in making up these Massachusetts tables, had excluded other substantial items of operating expense, than those expressly excluded by his headings, and that therefore his tables did not reflect the exact situation. Mr. Lea, therefore, undertook to correct Mr. Adams' tables, and produced some corrected tables of is own, concerning these Massachusetts companies. The cross-examination of Mr. Lea, by Mr. Adams, however, (beginning on p. 493, vol. 2, printed record), clearly demonstrated that Mr. Lea either did not know what he was talking about, and did not understand the Massachusetts records at all, or else he was deliberately trying to mislead the court, because it turned out that the items which he claimed Mr. Adams had improperly excluded, were not operating expenses at all, and were not so reported to the Massachusetts commission, nor so treated by that commission. And Mr. Wettling, a director of the Gas Company, and one of its expert witnesses, who for a number of years has been the expert accountant of the Nebraska Railway Commission, and ought to have a sufficient understanding of accounting to be able to put a correct interpretation upon the Massachusetts reports and records referred to, fell into similar error, and his cross-examination by Mr. Adams (p. 804, vol. 3, printed record) clearly demonstrated that he had been misled by Mr. Lea. So that the net result of the attempt to discredit the testimony of Mr. Adams in this instance, as in every other instance, came to naught and only tended to strengthen his position. We wish to impress upon the mind

of the court, the great value of these Massachusetts tables in relation to the matter now under consideration. It must be remembered that if there is any item in these general expenses that would be influenced at all by locality, those items have been excluded by Mr. Adams from the operations of both companies in making these comparisons. It therefore does not weaken the force of these tables, that we are out in the middle-west, and that these tables deal with Massachusetts companies, because the matters involved in the tables are not affected by location at all. Salaries of officers, clerical help, etc., would be about the same in Massachusetts as here. In fact, the executive salaries of this Lincoln company, practically all go to New York City, and the salaries of the local managers, and all, are undoubtedly fixed by the New York office, so that these salaries are, in every true sense, eastern salaries, and the reason for going to Massachusetts for these statistics is, that that is about the only place to go where such statistics, of any value, extending over a sufficient number of years to have anything like persuasive force, can be found.

Mr. Adams' Exhibit "368" (p. 1608, vol. 5) is a similar table relative to the Gas Company of Worcester, Massachusetts, covering the years 1895 to 1913, inclusive. It will be seen that the general expenses of that company which are compared with the same expenses of the Lincoln company, were in 1895, 16.24 cents per thousand cubic feet of gas sold, and, as the output increased, this expense per gas unit declined until in 1913, it was 8.24 cents per thousand cubic feet of gas sold as against 31.12 cents here. These Massachusetts tables in every instance show that, where the general expense was not already very low per gas unit, as the gas output increased the amount of the general expense per unit decreased. And why should not this be the result? Is it not what we would naturally expect? We have already shown that in the manufacturing department as well as in the dis-

tribution department the expense per gas unit has decreased with the increased sales. Now if the unit cost of making, purifying and distributing the gas is favorably affected by the increased output, what reason can be assigned for the opposite tendency in these general expenses which pertain principally to the management of the Company, and where we would naturally expect the unit cost to decrease far more than in the other branches of the business? To demonstrate that the results here complained of are not normal and are not to be attributed to locality we call attention to certain electrical tables, introduced by us, for the purpose of showing, and which do show, that in the electrical department of this Company these same general expenses declined during the same years as the output increased per unit of electric current.

These tables are taken directly from the electrical reports of the Company and represent that portion of these general expenses which are by the Company apportioned to the electrical department. There is no chance for quibbling nor claiming that we are not comparing the same items as are shown in the gas tables because they are the identical items there shown without the omission of anything. They do not even exclude taxes or any of the other items excluded by Mr. Adams from both sides of the comparison when he compared the Massachusetts companies with the Lincoln company. These electrical tables are made for the purpose of comparing one department of the Company where there is no attempt to regulate rates with the other department where rates are sought to be regulated and they are taken from the Company's own showing as to both departments. These electrical tables are indicated as follows:

Exhibit "379" (p. 1620, vol. 5) gives the expenses in the electrical department for each of the years of 1903 to 1912 inclusive, reducing the cost of reading meters in the electrical department to the unit cost per meter. It shows the number

of meters and the number of consumers in the electrical department for each year. It shows that the cost of reading meters in the electrical department has gradually decreased per meter as the output increased.

Exhibit "398" (p. 1621, vol. 5) shows the cost of generating steam in the electrical department taking the various items and the amounts of each, this expense is reduced to cents per K. W. hour for each of the years 1903 to 1912 inclusive. It shows that the unit cost of steam has declined as the output increased, varying somewhat with the different years.

Exhibit "401" (p. 1626, vol. 5) contains two tables, the upper one showing the gross earnings, the operating expenses and the net earnings for the electrical department for the years 1903 to 1912 inclusive. The lower table shows the collection expense of the electrical departments for the same years. Exhibits "399" (p. 1623) and "400" (p. 1624) are the tables dealing with the general expense of the electrical department and are the ones to which we desire to call especial attention at this point. We here set them out in full:

ELECTRICAL DEPARTMENT—GENERAL EXPENSE.

(Exhibit "399")

| | Total | 2.3553 | 3.6442 | 1.4685 | 1.5084 | 1.6980 |

Comparison should here be made between the last table above copied (Exhibit "400") and Mr. Lea's Exhibit "7-L-14," previously herein set out (on p. 131), wherein Mr. Lea has reduced these same items of expense as shown in the gas report to cents per thousand cubic feet of gas sold. And this comparison will disclose that, whereas, the total executive department, general expense, for the gas department has increased per thousand cubic feet sold from $.1750 in 1903, to $.2590 in 1912, in the electrical department the total of these same expenses per K. W. hour capacity have declined from $.31094 in 1903 to $.1698 in 1912. And we must remember, also, that the taxes are included in both tables and these have enormously increased during these years and constitutes perhaps the largest single item in these tables, and have been divided on the ratio of one-third to electricity and

two-thirds to gas, whereas, the other expenses, since May, 1908, have been divided on the ratio of 20 per cent to electricity and 80 per cent to gas. It is therefore to be remembered that these tables do not show the vast difference in the opposite trend of these general expenses in these two departments respectively which would be shown if the item of taxes were excluded. Let us take some of the single items in these two tables (Mr. Lea's Exhibit "7-L-14" and our Exhibit "400") and make a comparison, always remembering that in each instance, the item has been reduced to cents per unit.

EXECUTIVE SALARIES PER THOUSAND CUBIC FEET OF GAS SOLD AND PER K. W. HOUR CAPACITY.

| Year | Gas Sold Year | Expense Gas Department | Gen. Expense Electric | Expense Department |
|---|---|---|---|---|
| | 1903 | $.0353 | $.8692 | |
| | 1904 | .0176 | .4849 | |
| | 1905 | .0170 | .4216 | |
| | 1906 | .0182 | .3476 | |
| | 1907 | .0179 | .3161 | |
| | 1908 | .0256 | .1985 | |
| | 1909 | .0299 | .1811 | |
| | 1910 | .0467 | .1462 | |
| | 1911 | .0416 | .1336 | |
| | 1912 | .0380 | .1117 | |

Take the item of rent of executive offices as another illustration. Exhibit "400" does not give the unit cost of this item in the electric department for 1903, so we shall compare 1904 with 1912. Of course, we know that the actual office rent in dollars has very greatly increased from 1904 to 1912, but how did it affect the unit cost of gas and electricity as reflected in the Company's books? It will be seen at a glance that this item per unit of gas has been gradually going up, but per unit of electricity it has been gradually going down. For instance:

*Rent of Executive Offices—*

| | 1904 | 1912 | |
|---|---|---|---|
| Gas per M. cu. ft..... | $.0033 | $.0074 | increase of over 100% |
| Electricity per K. W. hour ..... | .0511 | .0182 | decrease of 64% |

*General Office Expense—*

| | 1903 | 1912 |
|---|---|---|
| Gas per M. cu. ft..... | $.0050 | $.0050 |
| Electricity per K. W. hour ..... | .0255 | .0167 |

*Legal Expense—*

| | 1903 | 1912 |
|---|---|---|
| Gas per M. cu. ft..... | $.0014 | $.0339 |
| Electricity per K. W. hour ..... | .1903 | .1620 |

*Incidental Expense—*

| | 1903 | 1912 |
|---|---|---|
| Gas per M. cu. ft..... | $.0213 | $.0204 |
| Electricity per K. W. hour ..... | .7706 | .0575 |

*Promoting New Business—*

| | 1903 | 1912 |
|---|---|---|
| Gas per M. cu. ft..... | $.0567 | $.0840 |
| Electricity per K. W. hour ..... | .3671 | .2948 |

So it will be seen that the normal trend for these general expenses is downward per unit as the output increases in the electrical department, just as Mr. Adams says it ought to be,and just as his Massachusetts tables show it to be in the gas plants of Massachusetts. In this gas plant, however, we have the peculiar situation of the unit cost of these general expenses increasing enormously from year to year in the gas department, in spite of the great increase in the gas sales, and in spite of the fact that the identical items of expense have been going down per unit in the electrical department, where the rate was not being regulated, and where normal tendencies have been permitted to take their course.

Can anyone inspect these tables and read the testimony of Mr. Phillips, the secretary of the Company (see pp. 768-9)

without being driven to the conclusion that since this rate ordinance was passed there has been a deliberate attempt upon the part of the management of this Company, not only to abnormally and unnecessarily increase these general expenses which are common to both departments, but also to make the apportionment between the two departments upon such a basis as will throw the great bulk of them into the gas department where they will do the most good in assisting the Company to strike down this rate?

As we have already said, in grouping the expenses of this company, for the purpose of making comparison with a long list of Massachusetts companies, Mr. Adams eliminated all items of gas making labor, gas making material, repairs, renewals, and taxes in order to eliminate from both sides of the comparison all items which might be affected by locality. The grouping thus made of the expenses of this company include some items of expense in addition to those classified by the Company, as "executive department general expense." He allows in his estimate thirteen cents per thousand cubic feet of gas sold to cover all of the expenses included in the comparison, which he says is ample, and which we think will be seen to be liberal in the light of the cost of the same items to the Massachusetts companies in the table which is to follow. In 1912 this company reported an expense of 31.13 cents per thousand cubic feet of gas sold to cover these same items, or rather an analysis of the Company's report shows this fact. As against Mr. Adams' allowance of 13 cents per thousand, we have nothing but the deliberate effort of the Gas Company to swell these expenses in the gas department by increasing the list of executive salaries and legal expenses, adding additional and unnecessary officials to the salary list, squandering money in needless advertising and incidental expense, and then making an outrageously unfair division of the expenses between the gas and electric department, thereby running

these expenses up in the gas department to more than double what they should be, and more than 18 cents per thousand above what Mr. Adams says would be ample, the increase thus brought about being almost enough to make up the difference in the two gas rates involved in this suit. Many of the Massachusetts companies referred to in Mr. Adams' table handle these same general expenses for 10 cents, and less, per thousand cubic feet of gas sold.

And, what is more to the point, these Massachusetts companies are selling gas at one dollar and less, and paying dividends, as witness Mr. Adams' Exhibit "369" as follows:

GAS RATES AND DIVIDENDS OF MASSACHUSETTS PLANTS IN THE YEAR 1912.

(Exhibit "369," p. 1608, vol. 5, printed record)

| Plant | M. Feet Gas Sold | Price Per M. Feet | Dividend Paid | Cents Dividends Per M. Sold |
|---|---|---|---|---|
| Attleboro ..... | 57,326 | $1.00 | 12 | 12.14 |
| North Adams .... | 89,731 | 1.00 | 18 | 6.74* |
| Suburban ..... | 131,822 | .90 | 9 | 13.25* |
| Taunton ..... | 126,492 | 1.00 | 10 | 17.39 |
| Salem ..... | 168,313 | 1.00 | 9 | 26.71 |
| Haverhill ..... | 235,116 | .85 | (Rate suit pending) | |
| Charlestown ..... | 266,869 | .85 | 12.5 | 20.34* |
| East Boston ..... | 375,193 | .85 | 10 | 15.33 |
| Newton ..... | 416,353 | .90 | 11 | 14.80 |
| New Bedford .... | 472,545 | .80 | 12 | 16.03* |
| Lawrence ..... | 441,324 | .90 | 8 | 16.25* |
| Malden ..... | 580,820 | .90 | 7 | 19.09 |
| Fall River ..... | 550,734 | .80 | 12 | 15.03 |
| Lowell ..... | 593,971 | .85 | 12 | 20.20 |
| Springfield ..... | 693,023 | .85 | 12 | 19.70 |
| Lynn ..... | 743,042 | .75 | 16 | 12.29* |
| Cambridge ..... | 762,630 | .85 | 10 | 15.74 |
| Worcester ..... | 783,734 | .75 | 12 | 17.61 |

* Estimated.

We contend, therefore, that this company has not made a fair showing as to what would be its normal and necessary

operative expenses as the law requires it should; it has not made an honest effort to reduce its operating expenses, but, on the contrary, it has enormously increased them during the very time when such increase would best serve the Company in its efforts to defeat this new gas rate, and it has deliberately attempted to perpetrate a fraud, not only upon the public, but upon the court by changing its method of apportioning the general expenses as between the gas and electric departments. It is not incumbent upon us to show just what these expenses should be in dollars and cents, but we have shown that they should be much less than they are now. We have shown that many well-managed companies are operating their plants at a rate of one dollar and less, paying substantial dividends to the stockholders, and managing their business with an expense equal to only about one-third of what is paid here for these general items included in Mr. Adams' comparison.

We shall proceed now to point out some of the items of expense which are greatly excessive, and some of the items which are entirely improper and should be eliminated.

## SECOND.

## DEDUCTIONS WHICH SHOULD BE MADE FROM OPERATING EXPENSES.

### (a) EXCESSIVE ITEMS.

#### 1. EXPENSE OF NEW YORK OFFICE.

This gas plant has no more use for the New York office and the New York management than a wagon has with five wheels. Nor does this community need the services of the New York office, nor does the New York office in the least contribute to the gas service of this city. The testimony shows that Henry L. Doherty & Company operates 108 public service plants in different parts of the country. Henry L. Doherty & Co. is a partnership composed of Henry L. Doherty, C. T. Brown and

F. W. Frueauff (p. 782, vol. 3). Mr. Frueauff says that he and Mr. Doherty hold office in most of these 108 public service corporations (p. 778, vol. 3) and that he drew salaries from not over three or four and that he supposed his salaries from these companies would total $15,000 or $18,000 (p. 782, vol. 3). It will be observed that he is a little indefinite as to the number of companies of this character from which he draws a salary and as to the sum total of such salaries and it is safe to assume that since he could not remember definitely and did not pretend to be definite that he kept on the safe side in stating the amount. He could not remember how many companies are paying a salary to Mr. Doherty nor as to the sum total of such salaries. We neglected to ask him about the salaries drawn by Mr. Brown, the other member of the firm, but it is safe to assume that Mr. Brown is drawing substantial salaries from many of these companies. When we recollect that these salaries are dumped into the coffers of Henry L. Doherty & Co. from all parts of the country and that Henry L. Doherty & Co. charges to this company $300 per year for the services of a gentleman in their office and on their payroll as eastern secretary of this company, who is supposed to devote a portion of his time to the business of this gas plant, and that they are probably receiving a similar amount for the same purpose from all of these other public service corporations controlled by them, when we remember that an auditor is sent out at least once a year, and sometimes oftener, to audit the books of this company for the enlightenment of this New York office, which costs this company the traveling expenses of such auditor and two or three hundred dollars for his services, which charge is for the benefit of Doherty & Co., and is received by them; when we remember that Doherty & Co. is constantly drawing from the Lincoln company substantial items for paying bond interest and for other services in financing this company; when we remember that Henry L. Doherty & Co. acts as banker for this

local company at New York City, and has on deposit a substantial sum of money belonging to this company and seems to feel perfectly free to draw on this company for funds when they are needed in financing some of their other enterprises, we are not surprised that these gentlemen in New York City are fighting a reduction of the gas rate here. Their concern in the matter is not on account of a reduction of dividends to the stockholders, because by reason of the great over-issue of bonds and the enormous executive salaries no dividends have been paid to stockholders for many years and no dividends will ever be paid to stockholders under any rate until there is a reorganization of the Company and a readjustment of its capitalization so as to bear some relation to the value of its assets. These gentlemen are opposed to reduction of rates because it would probably require them to reduce the amount of money they are drawing from this community for the benefit of the New York office without any consideration in return.

Exhibit "384" (p. 2026, vol. 5) is a telegram from Henry L. Doherty & Company to B. C. Adams, manager of the local company, under date January 4, 1910, directing Mr. Adams as to whom to elect on the board of directors, and to the different offices of the Company, which gives an idea of the completeness of the New York control. This telegram is the one which resulted in putting Armstrong in as president, at a fat salary without displacing anyone else, and it also added Mr. Frueauff, as vice-president, with a large and comfortable salary, both salaries being in addition to a salary list already too large, and this in the face of the danger of this alleged confiscatory rate, and while this very suit was pending. The telegram was as follows:

(Exhibit "384")

"New York, Jan. 4, 1910.

"To B. C. Adams, c/o Gas Company, Lincoln, Nebraska:

"Elect Doherty chairman, Board of Directors, Armstrong President, Frueauff Vice-President. Reelect Burnham.

"HENRY L. DOHERTY & CO."

This company has a local manager who draws $3,600 a year. For a number of years Mr. B. C. Adams was the manager of the Company; he was a practical gas man, eminently capable of managing the plant and having an adequate knowledge of all its departments and business. Mr. Frueauff, president of the Company, testified that Mr. Adams was a competent gas engineer and a practical gas man and that he had the necessary skill and ability to manage this company and to perform all of the local duties of the president of the Company and chairman of the board of directors (p. 783, vol. 3). That being the case, what right has this company to impose upon the gas consumers of this city the additional burden incident to maintain this Wall Street office? Notice the testimony of Mr. Frueauff (p. 779, vol. 3), where he explains that Mr. Adams gets $3,600 as superintendent and manager, Mr. Doherty gets $3,000 and witness gets $2,400, making a total of $9,000 executive salaries.

But this $9,000 does not tell the whole story by any means. We have no criticism to make against the $3,600 paid to the local manager, nor the salary paid to the local secretary, although it seems to us that these salaries are amply large to cover all of the expense necessary to be incurred in the form of executive salaries and for the management of the Company. This would be much more than the city of Lincoln would pay for the management of the Company if this gas plant were being operated by the municipality. If the local manager and local secretary are competent to earn those

salaries, and are competent to manage this company, as everybody admits they are, then we most earnestly insist that the gas consumers of this community cannot be burdened with the unnecessary expense incurred in connection with this superfluous New York management.

And notwithstanding the fact that this company is paying its local attorney $3,000 a year as a regular salary, it is also paying a regular retainer of $600 a year to C. A. Frueauff, an attorney of New York City, a brother of the president of the Company, for some supposed service he is said to render. And, besides, we notice an occasional substantial item paid to him for special services rendered by him from time to time, as for instance, $2,500 was paid to him or is firm in connection with the first appeal of this dollar gas rate case to this court (see p. 729, vol. 3), notwithstanding the fact that the former trial was conducted by Mr. Halleck F. Rose and Mr. E. C. Strode and these two gentlemen performed all the services in connection with the preparation of the brief and the argument of the case before the supreme court so far as attorneys for the City have any knowledge. Notice some of the principal items of expense of maintaining the New York office for 1912:

| | |
|---|---|
| H. L. Doherty, salary as chairman of board of directors | $3,000.00 |
| F. W. Frueauff, as president | 2,400.00 |
| A. C. Frueauff, New York attorney | 600.00 |
| New York secretary | 300.00 |
| Auditing expense (about) | 300.00 |
| Total | $6,600.00 |

We also point out in Exhibit "323," the incidental expense account for 1912, the following items of expense incurred by reason of the New York office:

| | |
|---|---|
| February 29, expense Adams & Strode, N. Y. trip... | $ 250.00 |
| February 29, B. C. Adams, expense Mgr. meeting, N. Y. | 280.00 |
| March 30, H. L. Doherty & Co., expense Winan.... | 18.23 |
| April 16, B. C. Adams, expense to N. Y. | 48.50 |
| Aug. 27, H. L. Doherty & Co., contribution | 160.00 |
| Oct. 27, H. L. Doherty & Co., traveling expenses N. Y. | 80.00 |
| Dec. 31, Adams & Strode, trip to N. Y. | 575.00 |
| Total | $1,411.00 |

In addition to the above and foregoing items there are in the accounts of the company for almost every month numerous items for telegrams to and from New York, the amount of which would be difficult to arrive at, and various items paid to the New York office for transferring stock and paying the coupons of this Company.

The 1913 accounts show a still heavier burden resulting from the maintenance of the New York office. We call attention to Exhibit "321" (p. 1502, vol. 5), showing traveling expenses alone for 1913. It will be seen that these traveling expenses are heavy and are very largely trips to and from the New York office. We also call attention to the legal expense, Exhibit "324" (p. 1502, vol. 5) for 1913. We shall deal with this item more at length in a later portion of this brief but we call attention to the numerous items entering herein which go to the New York office:

Te initials C. A. F. refer to C. A. Frueauff, Att'y, of New York City, a brother of the president of the Company. It will be seen that he figures quite extensively in these items.

Even the domestic fuel and appliance account for 1912, Exhibit "326" (p. 1502, vol. 5) shows numerous items paid to H. L. Doherty & Co.

We have not attempted to go through all of these accounts and undertake to segregate the items of expense attributable to the New York office. It would be impossible for us to do so because these accounts contain a very large number of items some of which are insubstantial amounts and aggregating for each year a very substantial sum, and which are designated by the abbreviation "contg." which we understand means contingent. The burden being upon the company not only to show the amount of its operating expenses but to show that they are reasonable, necessary and legitimate, we assume that it was the company's duty not only to segregate these items, but to satisfy the court that they were necessary items of expense in the operation of this gas company.

2. INCIDENTAL EXPENSE.

The incidental expense account for 1912 was copied in full and is Exhibit "323" (p. 1502, vol. 5). It is a substantial item of expense amounting in 1912 to $4,790 or an average of $399.16 per month. A very large part of this account is made up of improper items having nothing whatever to do with the manufacture and sale of gas nor with the economical and legitimate management of the Company. This account contains, of course, many items which are legitimate and it contains some which are doubtful but a very large part of the account and especially the larger items of the account are not only improper as items of expense but disclose a reckless disregard of the rights of the public if indeed they do not disclose a deliberate purpose to control public sentiment in the Company's favor and incidentally to swell the operating expenses to aid in defeating this rate. For the years 1907 to 1911 inclusive, we have not copied this account in full but have picked out certain items for each of the years which we consider improper items of expense and these will

be found in Exhibit "23." We here give the total of this incidental expense account for the years 1907 to 1912 inclusive:

| | | | Cents Per M. Cu. Ft. Gas Sold |
|---|---|---|---|
| 1907..... | $1,723.38 | (p. 301, vol. 1, P. R.) | 1907..... .0096 |
| 1908..... | 2,679.18 | (Ex. "26") | 1908..... .0137 |
| 1909..... | 3,715.04 | (Ex. "27") | 1909..... .0182 |
| 1910..... | 2,878.22 | (Ex. "28") | 1910..... .0137 |
| 1911..... | 5,162.84 | (Ex. "29") | 1911..... .0227 |
| 1912..... | 4,775.01 | (Ex. "30") | 1912..... .0204 |

This account is not only a substantial one in the sum total of dollars, but reduced to cents per thousand cubic feet of gas, it represents a substantial portion of the twenty cents involved in this controversy. And it will be observed, as we have already pointed out, that the incidental expenses have wonderfully increased in the dollars represented and also in the cents per thousand cubic feet of gas, whereas they should have decidedly decreased when reduced to the unit cost of gas. This is the account which contains items of donations, cigar, candy and cafe bills, flower bills, bills for entertaining guests, bar bills for beer and cocktails, prize fights at the Beach, forty dollars a month to the manager to be spent in being a good fellow, no account to be rendered and no questions to be asked, and this in addition to his $3,600 salary. Since the manager seems to have paid all of the items incident to being a good fellow in the form of cafe bills, bar bills, cigar bills, candy and flower bills, we do not believe he spent this forty dollars at all, except by adding it to his salary and using it for his own purposes, unless he had other methods of being a good fellow which have not been made apparent. This account also discloses that the heads of departments of this company for years have been having weekly "feeds" at the Savoy Hotel, and other cafes, and charging the expense to the Gas Company. The total paid to the Savoy Hotel alone for cafe service in 1912 for these heads of departments was

$222.00. It will be seen also that at least two of the heads of departments joined the Country Club and had their Country Club dues paid by the Gas Company. As we understand it, it costs $60.00 to join the Country Club, and the annual dues thereafter are $40.00. The custom has been also, for a number of years, to donate to the Commercial Club $200.00 per year and also to pay the annual dues of several of the heads of departments and charge all these to the incidental expense account of the Gas Company. Numerous donations appear in this account from year to year, donations to the Charity Organization, the Salvation Army, Wesleyan University, Havelock Commercial Club, the German Day Parade, etc., etc. The cigar bill for 1912 was $27.00. Also included in this account are various items of expense incident to handling the company's notes and paying the company's coupons. Certainly the gas consumers of this city cannot be burdened with items of interest paid on this Company's bonds and notes nor with any expense incurred in New York in connection with paying the interest nor handling the notes. In this incidental expense account also appear numerous items charged as "rebates." Running these down we discovered that many of these rebates could not be explained. The vouchers contained nothing save the amount charged to this account by this rebate slip and certain mysterious initials. Mr. Honeywell, the manager of the Company at the time that some of these rebate slips were made, and in whose handwriting they appear, could not, for the life of him, remember anything about them nor give us any information as to what the initials meant. All such items should be eliminated from the operating expenses of the Company as the burden put upon the Company is to show that the expenses were legitimate. The Company has not only failed to show that these rebate items were legitimate, but on the contrary, the City was able to show that some of them, at least, were mere gratuities given to some favored and influential

individuals, in the form of free gas, running back through a series of years. For instance, we call attention to Exhibit "328" (p. 1502, vol. 5) being an account designated "rebates and allowances" for the year 1913, also Exhibit "329" (p. 1502, vol. 5) showing rebates to T. H. Pratt, and also to Exhibit "271" (p. 2007, vol. 5) prepared by Mr. Thomas, covering these rebates and allowances from 1907 to 1912 inclusive, and Mr. Thomas' testimony relative thereto (p. 1257, vol. 4).

It will be seen that these rebates to these few favored individuals for said years amounted in the aggregate to $3,408. And there are numerous other incidental expenses wholly unexplained but which were conceded in the record not to be properly chargeable to operating expenses to the extent of $800.

3. LEGAL EXPENSE.

This item of legal expense is one that has been growing enormously in recent years and of course, the growth is due largely, if not wholly, to this litigation over the gas rate. The following tabulation shows the legal expense for the years 1905 to 1913 inclusive, both in dollars and in cents per thousand cubic feet of gas:

| Amount | | Cents Per M. Cu. Ft. Gas Sold | |
|---|---|---|---|
| 1906..... | $ 757.43 | 1906..... | .0032 |
| 1907..... | 2,160.31 | 1907..... | .0120 |
| 1908..... | 1,796.32 | 1908..... | .0092 |
| 1909..... | 1,858.52 | 1909..... | .0091 |
| 1910..... | 5,911.70 | 1910..... | .0281 |
| 1911..... | 8,279.48 | 1911..... | .0364 |
| 1912..... | 7,954.73 | 1912..... | .0339 |

For the year 1906 the legal expenses of this Company were $757.43 and that was large enough. There is no reason why the normal legal expenses of this company should be great.

Aside from this present litigation over the rate, the Gas Company has very little legal business. And we believe any competent attorney would be willing to handle the business of this Company, aside from this litigation, and aside from any extraordinary litigation that might arise from personal injury suits, for $50.00 per month. There is nothing in this record to show that this Company has any other litigation pending nor that it has ever had much litigation aside from litigation with the public over taxes, franchises and rates. If this Company would abolish the New York office and get rid of that amount of expense, and free itself from the influence of the coterie of Wall Street high-financiers who seem to have the idea that the way to manage a public service plant is to ignore the rights of the public, and render the minimum of service at maximum expense, it would have practically no litigation at all, and would not need the services of an attorney except upon rare occasions and then mostly for consultation. We think the Company never paid over $50.00 a month for legal services, prior to 1906. Certainly there is nothing about the increased output of gas, or the increased number of consumers which would add any considerable amount to the work of an attorney, nor to the normal legal expense of the Company. We therefore contend, and we think the items contained in the legal expense account clearly show, that the increase which has taken place in the legal expense of the company has been due almost wholly to the pendency of this present litigation. Certainly no one will contend that a public service company can attack an established rate as confiscatory and incur large expense in its attempt to strike down the rate, and use this expense as one of the elements to enable it to show that the rate is confiscatory. And it has been held that the expense of litigation to set aside an established rate cannot be considered in determining the question whether the rate will yield a fair return or not.

The following quotation from the opinion in *San Diego Water Company* v. *City of San Diego*, (Cal.) 62 A. S. R. 261, 275, is not only in point as to the duty of the Company to show all items of expense to be proper, but it is especially in point on the exclusion of the expenses of this present litigation:

> "Whether all of the items complained of are proper or improper cannot be determined upon this record, but some of them are not shown to be proper. It will be the duty of the court on a re-trial to allow no item of expenditure which is not satisfactorily shown to be an actual and proper charge in the actual conduct of the business of supplying water; and, when legal or other general expenses are claimed, they must be shown to have had a proper relation to that business. Of course, the items of expense in the present action should be disregarded."

4. SPECIAL APPRAISAL EXPENSE AND EXPENSE OF DOLLAR GAS CASE.

Exhibit "327" (p. 1502, vol. 5) is a special account established in January, 1913, in which is entered various items of expense incident to the appraisal of this property for the purpose of this suit and various other expenses relating to this trial, amounting for the year to $10,444.78. We need not argue at length the impropriety of including this expense as an operating expense for the purpose of testing the validity of this gas rate. As we have already argued in connection with the increased legal expense resulting from this present suit, this special appraisement and all other expense resulting from this suit, or in any manner connected with it, cannot be included as a part of the expense to cut down the revenues for the purpose of testing the validity of the rate. It must not be forgotten, however, that in all of Mr. Lea's calculations as well as those of the master as to the net return yielded under the old rate as well as under the new, these items of expense have been included by him.

### 5. SUNDRY EXPENSE.

In the 1913 classification there is an account denominated sundry expense, which bears a very close similarity to the incidental expense account for the previous years which we have already discussed. It is set out in full in Adams' Exhibit "330" (p. 1502, vol. 5). It will not do to say that all of this account is to be eliminated but we will say that a very large part of it should be eliminated. It is not clear to us to what extent these items were charged to operation, but at all events the items are interesting when considered in connection with the gas business. The entries for the month of January aggregate $275 and we do not find a single item there that is a legitimate operating expense for this company. The aggregate $207.91 of the items for February we think should be entirely excluded as there is no item there shown which clearly appears as a legitimate operating expense. Certainly the item of $18.00 with the Banks Law Publishing Co. for law books for E. C. Strode was not proper nor the item of $169.23 for J. A. Bogg's note. But we will not occupy space in a further discussion of these items. We ask the court to look them over and see how many of them look like legitimate items of operating expense in the gas business.

### 6. TRAVELING EXPENSE.

Exhibit "321" (p. 1502, vol. 5) is the traveling expense account of 1913 and shows a total spent for traveling alone in that year of $742.25.

These gentlemen are doing far too much traveling at the expense of the Lincoln gas consumers. There is no reason why the gas consumers should be burdened with the expense of these junketing trips, and this item should be excluded from the operating expenses, not only for 1913, but for all years preceding. It will be seen that for the years previous

to 1913, these traveling expenses were run into the "incidental expense account," and that 1913 was not an exceptional year for traveling expenses.

7. PROMOTING NEW BUSINESS.

Since this Company has a monopoly of the gas business in Lincoln, one would naturally think that the expense of promoting new business would be very small. Everybody knows what gas is used for. Gas has been used in this country for about a hundred years. The public needs very little education as to the use of gas. Yet this Company for a number of years has been spending an enormous sum annually to promote new business. Exhibit "326" (p. 1502, vol. 5) is the new business account for 1912 and it shows that the Company spent in that year for promoting new business $19,696.64. We have already had occasion to refer to this expense in connection with the matter of "going value." We have pointed out that for ten or twelve years this Company has had a new business department and has been spending large sums of money to promote new business and now that the new business has been promoted to its present proportions Mr. Lea seeks to capitalize the business thus built up to the extent of $225,000 as an asset upon which the Company is entitled to earn dividends. We contend that insofar as it is proper to spend the revenue of the Company to build up the business and charge the same to operating expense that this is the sum total of the burden which the public should be called upon to bear in connection with the matter of building up the business and to include the business thus built up and charged to the expense of operating as an asset of the Company upon which it is entitled to earn a return is nothing but duplication. Mr. Whitten in his work on valuation of public service corporations (Sec. 641), says:

> "Some estimators, while allowing in the valuation for a capitalization for the cost of promoting business, nevertheless treat the current expenditures for this purpose

> as an operative expense in estimating future income requirements for rate purposes. Of course this is wrong, for this item cannot be charged both to operation and to capital."

If, therefore, the court shall conclude that "going value" is a proper element to include among the assets of the Company for rate purposes it seems to us that it necessarily follows that all of this item for the promotion of new business should be eliminated from the operating expenses to avoid duplication.

And whether eliminated or not it certainly requires no extensive argument to show that approximately $20,000 is too much to spend in the single year of 1912 for promoting new business in a gas plant that has absolutely no competition in the sale of that commodity. It is ridiculous to claim that any such expense is either necessary or reasonable. If anything is allowed for the item of promoting new business it should be a modest sum and it was for the Company to show just what that sum should be and it has failed to do so.

This record shows that the total amount spent by this company to promote new business alone for the years 1903 to 1913, inclusive, amounts in the aggregate to $155,610.93, as the following table will show:

NEW BUSINESS EXPENSE.

| | |
|---|---|
| 1903 (Adams' Ex. "281," bot. p. 1481)... | $ 5,578.97 |
| 1904 (Adams' Ex. "282," bot. p. 1482)... | 16,400.65 |
| 1905 (Adams' Exhibit "283," p. 1484)... | 15,919.73 |
| 1906 (Adams' Exhibit "284," p. 1484)... | 13,432.41 |
| 1907 (Adams' Exhibit "285," p. 1485)... | 13,394.04 |
| 1908 (Adams' Exhibit "286," p. 1486)... | 11,634.96 |
| 1909 (Adams' Exhibit "287," p. 1487)... | 14,019.36 |
| 1910 (Adams' Exhibit "288," p. 1488)... | 16,152.75 |
| 1911 (Adams' Exhibit "289," p. 1489)... | 18,985.52 |
| 1912 (Adams' Exhibit "290," p. 1490)... | 19,692.64 |
| 1913 (Plaintiff's Exhibit "424," p. 2062). | 10,399.90 |
| Total ..... | $155,610.93 |

We not only contend that this expense is almost wholly unnecessary in the case of a monopoly of a commodity so well known, and so long used as gas, but we also contend that if any new business at all has been brought to the Company as a result of this expenditure, *it is insignificant as compared to the result which would have been obtained by saving the money and reducing the price of gas correspondingly.* A simple announcement, each year, that the Company had reduced gas to the extent which would be represented by this new business expense, would have done far more to bring new consumers to the Company, and to encourage old ones to consume more gas, than a policy of exacting exorbitant rates from gas consumers and spending it in subsidizing newspapers in the form of advertising, donating large sums to commercial clubs and other institutions, spending large sums in divers forms of entertainment, and donating to bankers, city officials and prominent business men free gas and electricity at the expense of other consumers, and running these donations into the operating expense as so much money paid out, could possibly do. And what is more to the point, a reduction of the rate, even though it brought about reasonable economy, cut down the advertising bills, cut out the junketing trips for the heads of the departments, and put an end to the cigar bills, cafe bills and other forms of extravagance, would have inured to the benefit of the gas consumers from whom this company draws all of its money, and would have created a proper, healthy relation between the company and the consumers, which would end this litigation and wipe out practically all of its legal expense.

In order that it may be seen how this money is spent we direct attention to Exhibit "326." (P. 1502). It will be seen that a very large amount of the money is spent for advertising in the various newspapers and publications in the city and by electric signs and window display. A very

large part of the money, and perhaps the largest part, is used in connection with demonstrating appliances, such as gas stoves and electrical appliances, and it must not be overlooked that the total money spent to promote new business is to promote the electric business as well as the gas business, and also to promote the sales of gas appliances and electric appliances. The electrical department has strong competition, but the gas department has none. There is some reason for spending money to promote and build up the electrical business where competition exists, but there is little excuse for spending much money in promoting the gas business where there is no competition. *Yet this company apportions this new business expense 80 per cent to the gas department and 20 per cent to the electrical department.* We have here, then, not only a sum of money spent for the promotion of new business which is enormously excessive, but it includes the sale of gas and electrical appliances, which do not belong to a public service business, but is a purely private business in competition with various dealers of the city who handle the same articles, and it includes the electrical department as well as the gas department, and yet 80 per cent of the entire expense is entered in the operating expenses of the gas department.

### 8. OFFICE RENT.

This company, during the pendency of this suit, and in spite of the fact that this "confiscatory rate" was staring it in the face, entered into a lease for an elaborate office at the corner of Fourteenth and O streets at a rental of $450 per month. In order that the court may see how poverty-stricken this corporation is, and what a scrupulous regard it has for the conservation of its revenues, we have caused two photographs to be taken, one of the interior and one of the exterior, of this magnificent office. Exhibit "336" (p. 1590, vol. 5) is the exterior view of a part of this office only.

The entire ground floor being too long for the capacity of the camera, the photographer was only able to take that portion of this side of the building devoted to displaying gas and electrical appliances, which may be seen in the windows. The elaborate and magnificent offices, occupied by the heads of departments and clerical force of this corporation, are still farther to the rear of the building. They are very luxurious in their furnishings, the cost of which is reflected in Mr. Lea's inventory where the details are given (Exhibit "7-I," p. 1320, vol. 4), showing a total valuation of the office furniture and fixtures alone of $13,031, two-thirds of which, or $8,606, is apportioned to the gas department.

Exhibit "335" (p. 1590, vol. 5) is an interior view of the main office only, showing the display room with its beautiful chandeliers, electric fans, upholstered settees, marble wainscoting, palms, etc., etc. We regret that the magnificent quarters of the heads of departments (by which term we mean the same gentlemen whose Country Club dues and Commercial Club dues, cafe and cigar bills are entered in the operating expenses of the Gas Company) cannot be shown in this photograph. They are farther to the rear and this enables the occupants to transact so much of the business as is transacted by them away from the noise and turmoil of O street and away from the vulgar crowd.

We call attention at this point to the enormous increase in the value of the office furniture alone resulting from the opening up of this magnificent new office. Let us quote the testimony of the manager, B. C. Adams (p. 1294, vol. 4):

Q. Mr. Adams, the item of office furniture is carried on your books and inventory at what valuation?

A. $12,391.21.

Q. And the same item is carried on the books at a valuation of what in 1901?

A. Well, it wouldn't be the same item. The same heading was carried at $240.

Q. In other words, you had your office furniture valued November 30, 1901, and entered on your books at a valuation of $240?

A. Yes, sir.

Q. Whereas you have it now $12,391.21?

A. Yes, sir.

Perhaps the logical place to discuss the matter of office furniture was in connection with the works equipment where it is classified by Mr. Lea. But since the enormous increase in the office furniture was made necessary by the establishment of the new office, we beg leave to discuss the item briefly at this point in connection with our criticism of the item of office rent. If this gas business could be conducted up to 1901 with an investment of $240 in office furniture, we are entirely unable to understand why the consumers of gas and electricity should be called upon now to pay a return upon an investment for office furniture alone of $12,391.21. No such investment is necessary, and the photograph of the interior of the office to which attention has been called will show that this office is far more elaborate than can be justified, especially when the expense is to be used to assist in striking down a gas rate.

Is there any justification for this company paying $450 office rent to conduct a business which has no competition and which could be conducted with just as much convenience to the public and with more profit to the company on a side street and at a rental of from $100 to $150 per month? We call attention to the testimony of George Monagan (beginning on page 572, vol. 2), as to rents on some of the side streets in the city of Lincoln as follows:

No. 934 P street, $100 per month; No. 938 P street, $75 per month; No. 1200 P street, $90 per month; No. 1204 P street, $80 per month; corner room same building, $90 per month; Brownell block, 135 So. Eleventh street, north room, $135 per month; south room $150 per month. North room occupied by a piano store, south room by a cafe; both rooms with full basement and each with as much or more space as the main floor of the Gas office. No. 143 So. Eleventh street, occupied by Stamm's dry goods store, with full basement, $125 per month; floor space larger than floor space at Gas office.

Now, there isn't any reason why this company should expend for rent to exceed $150 per month, and this testimony of Mr. Monagan shows that $150 would be ample to procure an adequate and sufficient office room to transact the gas business. Mr. B. C. Adams, the manager, undertook to justify this office rent. He claims that this office is necessary for the convenience of the public in the matter of paying gas bills, and registering kicks, but the location of the present office is not as convenient for the public as many of the buildings referred to in Mr. Monagan's evidence. All of the buildings referred to by Mr. Monagan are more nearly in the center of the business district of Lincoln than the present gas office. It is notorious that O street rentals are all out of proportion to the rentals on the side streets. Merchants and others engaged in business having strong competition are willing to submit to the exorbitant rentals for the privilege of being located upon O street, the principal business street of the city, but for a business like the gas business, free from competition, a location on any of the side streets would answer every purpose and would reduce the rent to not over $150 per month. We therefore contend that the item of office rent should be reduced to not to exceed $150 per month.

(b) IMPROPER ITEMS.

1. LOSS ON APPLIANCES.

Again we call attention to the fact that one of the reasons assigned by Mr. Adams, the manager, for the necessity of having this office on O street is that it was necessary for the purpose of making a proper display of gas and electric appliances. As to this point we wish to say that the sale of gas and electric appliances is no part of a public service business and the public has no power to regulate the prices or any control whatever over that branch of business. It is purely a private business, coming directly in competition with other dealers in the city handling the same kind of appliances. The public should not, therefore, be directly or indirectly burdened by this appliance business, either in the form of an increased rental so as to display appliances, nor by reason of any loss sustained in the sale of appliances.

We call attention to the fact that the annual report of the gas department for 1912 shows a loss on appliances alone of $7,301.93, and this loss, of course, is a part of the operating expense in the gas department (see B. C. Adams' testimony, p. 1294, vol. 4), as follows:

Q. Isn't it a fact that your annual report ending December 31, 1912, shows a total loss on gas appliances alone of $7,301.93, or thereabouts?

A. I don't remember; I could tell by looking at the report.

Q. What do you recognize from this report? (Handing paper to witness.)

A. Referring to the copy of the report handed me, are the totals for advertising and newspaper space, exhibition, salaries, wages and miscellaneous expenses, and then adding the cost of appliances sold to the appliance expenses and from that getting the total cost of the appliances, and then deducting the amount received from appliances, I find for the year represented in this sheet $7,301.92.

Q. And that is a loss that is reflected in the operating expenses of this company for that year, is it not?
A. Yes, sir.

Now, we submit that this is a pretty piece of business management. The logic runs thus: This expensive office is made necessary in order that the company may have a display window on an O street corner in which to display appliances in order that it may lose over seven thousand dollars in one year as a net result. If these people like this appliance business and wish to continue to dabble in it, then they ought to be required to pay the extra rent made necessary by that business and the gas consumers ought to be relieved, not only from the excessive rent, but from the entire loss sustained in the appliance business. This item of $7,301.93 should therefore be eliminated.

The following quotation from *San Diego Water Co.* v. *City of San Diego*, 62 A. S. R. 261, 275, is in point on the proposition that all expenses not actually incurred in supplying gas should be excluded:

> "Whether all of the items complained of are proper or improper cannot be determined upon this record, but some of them are not shown to be proper. It will be the duty of the court on a re-trial to allow no item of expenditure which is not satisfactorily shown to be an actual and proper charge *in the actual conduct of the business of supplying water;* and when legal or other general expenses are claimed, they must be shown to have had a proper relation to *that business.*"

---

2. EAST LINCOLN DISTRICT HOLDER AND SUBURBAN SERVICE.

We contend that if it had not been for the installation of the gas service at University Place and Havelock the East Lincoln district holder would never have been erected. A. D. Adams makes it quite clear in his testimony that the erection of the district holder and the extension of the mains to Havelock and University Place were coincident in point

of time, and were really a part of the same piece of construction. He also shows that there is no justification, and no economy, in establishing a district holder away from the plant for the benefit of the Lincoln service, and that it is not the modern method of overcoming pressure difficulties. He shows that if the district holder had been established for the purpose of correcting difficulties in the pressure in the city of Lincoln, there was as much or more necessity for it in southeast Lincoln than in East Lincoln, and he calls attention to the main maps of the company in support of his testimony (see p. 2546).

We wish to call attention to Exhibit "389" (bot. p. 228-29, vol. 5) a copy of a letter written by the manager of this company to the New York office to the effect that it would not be wise to attempt to install gas stoves in Havelock until the completion of the East Lincoln holder, because the pressure there would be inadequate without the holder (see also Wettling's testimony p. 4199). So we contend that the East Lincoln holder, even though it may serve some purpose in assisting the pressure in that locality, was erected primarily on account of the University Place and Havelock service, and would not have been erected but for such suburban service; and as we have already said, the total investment in the East Lincoln holder, and the buildings and equipment there located, should be eliminated from the inventory of property to be considered here and the total expense incident to the maintenance of the East Lincoln holder should also be eliminated. The annual report of the company shows a charge to operating expense for maintaining this district station, $3,425.13 for the year 1912, and the testimony of the company's witnesses concedes that this East Lincoln holder is connected up with the Havelock and University Place service, and at least a part of its purpose is to furnish pressure for those suburbs, and without this holder the suburban pressure would be

inadequate. Since it admitted that this East Lincoln holder is used at least jointly between the East Lincoln service and the suburban service, the burden was upon the company to show what, if any, part of the investment should be included in the Lincoln inventory, and what, if any, part of the expense of maintaining and operating this district holder station should be included in the operating expenses of the Lincoln service, and since the company has not furnished the means of making the proper apportionment, the whole matter should be disregarded and eliminated from consideration here.

And we think it will not be seriously controverted that the expense of the Havelock and University Place service should be excluded entirely as well as all of the receipts from that service, but merely to exclude the operating expense which the company has seen fit to assign to the suburban service does not do full justice to the Lincoln service. The suburban service should carry its share of the general expenses of the company, including its share of the manufacturing and distribution cost, as well as all of the general expenses incident to the maintenance of the office and the payment of executive salaries, and it should also bear its share of plant investment.

### 3. OCCUPATION TAXES.

We referred to and discussed the occupation taxes in several places in preceding portions of this brief. It is one of the items which the master included and which we contended should be excluded from the operating expenses in arriving at net revenues for the purposes of this case. We wish to make it clear that at the time this suit was begun there was in existence an ordinance in the city of Lincoln seeking to impose upon complainant an occupation tax of 2½ per cent of its gross receipts. Complainant had never

complied with this ordinance and has never paid anything under said ordinance. On the contrary it attacked said ordinance as invalid and discriminatory in its bill in this suit. The city, shortly thereafter, attempting to collect the occupation taxes under said ordinance by suit in the state courts. Judge W. H. Munger of the United States District Court, before whom this present suit was tried the first time, held said occupation tax ordinance void. The city council then on ..... 19...., enacted another occupation tax ordinance eliminating the discriminatory feature and seeking to collect from those selling both gas and electricity an occupation tax of 3 per cent of gross receipts. The complainant refused to comply with this new ordinance and did not pay and has never paid anything under it. The master held the 1907 occupation tax ordinance valid and allowed the amount of the occupation tax called for by it as a part of the operating expense of that year. The second occupation tax was not put in issue in the bill in this suit and the master allowed the amount called for by it as a part of the operating expeness in his deductions as to the rate of return for 1912, notwithstanding the company had never paid it and was defending against its collection in a suit in the state courts wherein the city was attempting to enforce it. Judge Morris, who heard the exceptions to the master's report, held the original occupation tax ordinance void.

Since the judgment in the instant case on the master's findings, the Nebraska Supreme Court held the first mentioned occupation tax ordinance void, and sustained a plea in abatement as to the second occupation tax ordinance suspending its enforcement until the termination of the instant suit in the federal courts.

See, *City of Lincoln* v. *Lincoln Gas & Electric Light Co.*, 100 Neb. 182 and 188.

As we have already said, since the complainant never paid anything under the first mentioned ordinance and since the same has finally been held void by the state supreme court, there can be no longer any claim that it was a part of the company's operating expenses at the time the gas rate ordinance was to go into effect nor at any other time.

As to the second occupation tax ordinance it is our contention that the company cannot resist payment and at the same time claim the amount of the occupation tax as a part of the operating expenses.

### 15. Lea's Figures as Compared With Construction Account.

Before closing this brief we wish to call attention to the striking difference between the testimony of Mr. Lea, as to the additions made to the gas plant in the several years 1907 to 1912, inclusive, and the actual record of the company as shown in its constructive account. Now, the records of this company ought to mean something, especially entries made since the last trial of this case. We are not now going back into the "dark ages" of this company, and there can be no excuse for claiming that the construction account does not contain all of the items of construction added to this plant since 1906 and the actual cost of construction. The following table tells its own story. Not only have we the construction account to compare with Mr. Lea's figures, but Mr. B. C. Adams, the former manager of the company, testified at page 1842 to the items of construction added to the plant in 1912, and his figures agree exactly with the construction account for that year. The table is as follows:

| Year | Per Lea (Ex. 7-P) | Company Const. Acct. (Ex. 163) | Excess Lea Over Const. Acct. |
|---|---|---|---|
| 1907 | $127,638.00 | $ 16,017.70 | |
| 1908 | 50,805.00 | 73,638.84 | |
| 1909 | 115,184.00 | 23,031.93 | |
| 1910 | 70,462.00 | 50,248.06 | |
| 1911 | 74,289.00 | 20,333.10 | |
| 1912 | 41,470.00 | 27,167.70 | |
| | $479,948.00 | $210,437.33 | $269,510.67 |

Mr. Lea's additions during said years, of course, includes $113,664 for going value, and other intangibles, but deducting these intangibles from Mr. Lea's "total added" we have $366,294, as the amount which Mr. Lea estimates was added during said years to the physical property without any engineering, overhead, or other intangible elements, as against the actual figures shown by the company's construction account of $210,437, or an excess of Lea's imagination over the company's books of $155,858.

Now, what excuse can there be for this? If Mr. Lea is a gas expert, as no doubt he is, then he had the means of going to the construction account of the company and ascertaining exactly what the company had added to its plant during each of said years. No one claims that these records have not been accurately kept, and an inspection of them for said years will satisfy the court that they are kept with scrupulous regard to details and that nothing has been omitted. Again we ask, what may we expect of a gentleman who comes here to estimate the value of a gas plant, and who expects a court to give credence to his testimony, and yet who is willing to put into this record an estimate of actual additions made to this physical property so enor-

mously in excess of what the company itself claims, especially when he had the ready means of determining the correct amount?

Wholly disregarding Mr. Lea's inflated estimate, and taking the company's records for it just as they are, we find that there has been added to this plant, since the last trial, by way of extensions, a very large sum. We are therefore now testing this rate ordinance, which was to go into effect in December, 1906, not by the property which the company had then, but by what it claims to have now. It was, therefore, to a very large extent, within the power of this company to endanger, if not to defeat, the rate by arbitrary additions to its plant while the rate suit was pending, and doubtless these large additions to the plant may be accounted for in this way. The plant has been extended, especially in the matter of holder capacity, far beyond present needs, and with a view to large future growth. In considering the validity of this rate, the court should remember the temptation placed before this company to add enormously to the value of its property and to build far beyond present necessity, in order to get the benefit of the increased value thus added in testing this rate. Careful consideration should therefore be given not only to the present value of the property, but also as to the actual necessity of these extensions. If the company has built beyond present necessities, this rate should not be endangered thereby, but the rate should be put into effect and tested out during a sufficient length of time to allow these new additions of the company to reach their full earning capacity and to permit the business of the company to overtake the extensions.

See *Spring Valley Water Co.* v. *San Francisco*, 165 Fed. 667.

The East Lincoln holder should be charged to the suburban service, for which it was primarily constructed, and this

should include all of the expense of maintaining that holder. In this connection we again call attention to Exhibit "389," being a letter from the manager of this company to the New York office, in which reference is made to the Havelock service and the East Lincoln holder. This letter contains the following language:

> "Our revenue in University Place for the first full month we have had, was $102. Things are going rather slowly out there at present, due to the dry condition of the surrounding country, so I am told. I feel, however, that since our first month's bills have been distributed, we will have pressure brought to bear on prospective customers by those already using gas. We have discontinued the acetylene plant at Havelock and are now furnishing gas from our University Place mains. The Havelock consumers are using the gas for illuminating purposes only and the revenue from them is very small. We do not feel that it would be wise to attempt the installation of gas stoves until our holder in East Lincoln is erected."

Attention is also called to the testimony of Mr. Wettling, where he admits that the East Lincoln holder is necessary to the suburban service (see page 807, vol. 3).

Even if it be true that this holder aids the East Lincoln service, still the value of such aid is so doubtful that it is difficult to measure it. It seems to us that a fair way to dispose of the East Lincoln holder is to assign it, together with all of its expenses, to the suburban service, in consideration of the use of the manufacturing plant and the mains which carry the gas to the city limits, and in consideration of the fact that all of the general expense of the company is charged to the Lincoln service. According to the 1912 report the suburban sales were 3.2 per cent of the total sales. The present value of the works equipment of this plant for 1912, according to Mr. Lea, was $196,759, and the value of the real estate of the plant, according

to Mr. Lea, was $42,867; 3.2 per cent of all of this property at the plant, as valued by Mr. Lea, would be $7,667. In addition to that, the mains from the plant to the connection with the Havelock line should be compensated for, and the Havelock service should be charged with at least 3.2 per cent of all of the expenses of the company. It certainly seems to us that these would be sufficient to more than compensate for the little value added to the East Lincoln service, by the use of the East Lincoln holder.

### 16. Offers of Company to Install $1 Rate.

Wholly aside from expert valuation, theories and deductions, we wish to call attention to the fact that this company, on several occasions, offered to install the $1.00 rate in consideration of certain concessions on the part of the city. At the time the rate ordinance was being considered complainant proposed to the city council to install a sliding rate which would go down first, to $1.15, and then decrease five cents per year until it reached the $1.00 rate in 1911. In 1910 it proposed that if 75% of the gas consumers would waive their claims in writing, for all overcharges collected during the pendency of this suit, the $1.00 rate would be installed at once. In the fall of 1912 complainant offered to install the $1.00 rate and pay the city $20,000 of the disputed occupation taxes, and to pay the overcharges involved in this suit up to December, 1910, from which time the $1.00 rate was to be considered as having gone into effect, and that the $1.00 rate was to remain in force until January 1, 1914, when it was to drop to 95 cents, said last proposition being made as an offer looking to the settlement of this suit, the offer was rejected by the voters of the city. Now is it reasonable to suppose that the company either for or without a consideration would agree to install the $1.00 rate and even to reduce it to 95 cents if it considered either rate

confiscatory? The fact that the company offered to install the $1.00 rate implies that it was well aware that it could do so without confiscating its property. During the campaign for the proposed compromise of 1912 the company in its attempt to influence the voters to accept the offer advertised extensively in the local papers. One of its favorite productions was a cut with lines thereon indicating how much better off the public would have been had the previous offers of the company to install the $1.00 rate been accepted because, as this cut shows the public would have been enjoying the $1.00 rate from and after 1911. (See exhibit 334, page 2026, vol. 5).

**17. As to the Contention That the Gas Business Is Hazardous.**

Certain testimony was introduced by complainant as to the rates of return expected of business institutions in this locality. All of these witnesses admitted on cross-examination that their estimates were not influenced by locality at all and that the rates of return to which they testified as being fair were applicable anywhere. They practically all admitted that interest rates were little, if any, higher here than elsewhere, and no higher at all than at any other point in the middle west. None of these witnesses had had any experience in the gas business and their testimony had no application to a business having a monopoly upon a stand ard and necessary commodity such as gas.

We introduced in this case exhibit "17" (page 1706, vol "5"), and exhibit "18" (page 1708, vol. "5"), to which we direct the court's attention. These are circulars gotten out by Henry L. Doherty & Company, the operators of the Lincoln plant. Exhibit ',17" is a chart which shows graphically, not only the rapid and constant increase of both gross earnings and net earnings of gas and electric properties, but also shows how free such properties are from the hazards of fluc-

tuation. This chart shows what these people really think of gas properties as investments when they are not in a suit attempting to defeat rate regulation. The reading matter in exhibit "17" explains how the chart is made up, and then adds:

> "The resulting curves shown above prove that the gross and net earnings from the gas and electric business increased the most rapidly and that they are practically unaffected in their rate of increase even by such panic conditions as those of 1907 and 1908."

Erhibit "18" is a circular gotten out by Henry L. Doherty & Company with special reference to the securities of the Cities Service Company, one of the numerous companies controlled by Henry L. Doherty Company. The circular contains the following matter relative to the subject now under discussion:

> "Gas and electric properties have many strong points in their favor, tending to establish stability of earning power and safety of their securities. Their business is the selling of a public necessity. In good times or bad times their product is in demand. Luxuries may be foregone in times of financial stress, travel may be curtailed, and in many ways the public's expense may be reduced, but light and heat are a necessity of every day life and are among the last things to be affected by general conditions in business. In the present day of continual development of new adaptations and uses for gas and electricity, as well as the steady increase in the population of our American cities, there are many opportunities for expansion and growth of well managed and aggressive gas and electric companies."

As indicating what Henry L. Doherty & Company consider an attractive rate of return in a business having all of the advantages described in the foregoing quotation we quote further from said Exhibit 18:

> "Dividends are paid monthly at the rate of 6% per annum on preferred stock and 4% per annum on common stock."

And the properties which said circular tells us were owned and operated by the City Service Company, (the Doherty holding company described in the exhibit) from which said dividends were derived are the Denver gas and electric plant, the gas plant at Spokane, the electric plant at Joplin, Mo., and the Brush Electric Company at Galveston, Tex., all western concerns where rates of interest are higher than at Lincoln, with the possible exception of the Joplin property, where the prevailing interest rates are about the same.

Certainly these people can have no just criticism of the master's finding that in such a business 6% is a fair return since they themselves consider it sufficiently attractive to be held out to the public as an inducement to purchase their preferred stock, whereas 4% is good enough for one entering into the venture as a common stockholder.

### 18. Rate of Return.

In the preceding subdivision we referred to the fact that the master found that 6% was a reasonable rate of return at Lincoln for a business of this character, and that Henry L. Doherty & Company, the operators of this plant, also consider that rate and even 4% attractive in the case of other western plants. We shall now make a few final deductions as to the actual rate which this company would earn under the $1.00 rate. We have already shown that had the master eliminated the occupation tax from the operating expenses for 1907, his net rate of return for that year at the $1.00 rate would have been a little over 6.1% without any other alteration in his figures, this being upon the actual sales of that year and allowing nothing for the probable increase of sales under a reduced rate. We have shown, also, that complainant has been relieved of the occupation tax of that year by a decision of the Nebraska Supreme Court, and that it must therefore be eliminated. We have also pointed out that

the master found that, on the actual sales made in 1912, the company would have realized a net income at the $1.00 rate of 6.9%, whereas, if he had eliminated the occupation tax for that year the rate would have been 8% without making any other changes in the master's figures. For the intervening years he made no findings as to return but referred to Mr. Lea's figures as indicating that, for those years, the return would have been substantially higher, and he is borne out in this by Mr. Lea's Exhibit "7-P," (page 1358, vol. 4 of the printed record), where Mr. Lea estimates the "Corrected Net Earnings, Gas Department in % of Then Present Value" for said several years at the $1.20 rate as follows:

| 1907 | 1908 | 1909 | 1910 | 1911 | 1912 |
|---|---|---|---|---|---|
| 7.029 | 9.247 | 9.464 | 8.437 | 8.029 | 6.698 |

And in Lea's Exhibit 105 (p. 1364, vol. 4) he shows that at the $1.00 rate the return would have been, as the master states, from 50% to 100% higher for the intervening years than for either 1907 or 1912.

Since said 2xhibit 7-P is the basis for Mr. Lea's calculations of net return under the $1 rate we desire to point out wherein we think his so-called "Corrected Net Return" should be still further corrected:

### 18. Rate of Return.

### ANALYSIS OF EXHIBIT "7P."

In Exhibit "105" (p. 1364, vol. 4) Mr. Lea has shown the net return for the years 1907 to 1912, inclusive, to the complainant from its gas department, based upon the present value of its gas property as found by him, with gas at $1.00 per thousand cubic feet. Mr. Lea's values are found under the heading "The Then Present Value of Entire Property," at the foot of each column in Exhibit "7-P," for the re-

spective years. It will be seen by an examination of Exhibit "7-P" that he has deducted from the receipts of each year all the money received from gas sales outside of Lincoln. He then credits to the operating expenses the output cost of gas sold outside of Lincoln. He then adds to the operating expenses a charge for a correction in the residual account, and then adds his full allowance for depreciation to the operating expenses. The total, after doing this, he calls "Corrected Operating Expenses Gas Department," which he deducts from the corrected gross earnings and arrives at the total "Corrected Net Earnings Gas Department." These net earnings he carries into the first figure in each column shown in Exhibit "105," and from which he deducts one-sixth (1/6) of the gross earnings in order to reduce the net income to the $1.00 basis. Using this method, Mr. Lea finds the net return to be at the $1.00 rate for the respective years:

| | |
|---|---|
| 1907 | 2.136% |
| 1908 | 4.211% |
| 1909 | 4.742% |
| 1910 | 3.761% |
| 1911 | 3.220% |
| 1912 | 1.925% |

Exhibit "7-P" is subject to the following criticisms:

The item "Gross Earnings Gas Department as Reported" does not include the non-operating revenues as disclosed by Exhibit "153." While these revenues for the years 1907 to 1910, inclusive, are small, ranging from $56.00 to $115.00 per year, the situation is different as to 1911, when these revenues amounted to $4,653.88.

The next item in Exhibit "7-P," "Deduct Receipts from Gas Sales Outside of Lincoln," is unfair in that the total property values at the foot of the various columns include all of the property outside of the city of Lincoln. We should

either exclude this property or include the revenues. It was claimed in the oral argument before the master that these properties were excluded by Mr. Lea in his corrected figures in Exhibit "425." However, upon analysis we are unconvinced that this has been done. The same is true of the item "Deduct Output Expense Gas Sold Outside of Lincoln," where Mr. Lea has ostensibly deducted the proportionate cost of manufacturing the gas sold outside of the city limits. The fact that the total operating expenses for 1912 show a cost of 74.92 cents per thousand cubic feet on all gas made, and the amount deducted from the total operating expenses on account of gas sold outside of Lincoln is but 26.43 cents per thousand cubic feet of gas, indicates another case of Mr. Lea's unfairness. (See Exhibit "7-L," p. 1358, vol. 4, Apportionment Operating Expenses 1912.) This same method was used for the other years.

His next item, "Add for Depreciation," is the total depreciation allowance. Since the various witnesses for the company have repeatedly testified that certain replacements which have taken care of depreciation were charged into operating expenses, fairness requires credits against this item for such allowance so charged into operating expenses. (See Phillips' testimony, page 1203, vol. 4.)

This exhibit is subject to the further criticism that the expenses common to both the gas and electric departments have been divided on the basis of 80 per cent to gas and 20 per cent to the electric department on the supposed basis of the relative number of consumers. Reference to Exhibit "101" (p. 1849, vol. 5) discloses that at no time during the history of this litigation has the percentage of gas consumers ever been as high as 80 per cent, and for the year 1912 it was as low as 73 per cent. Besides, the total number, as carried through the years 1907, 1908, 1909, 1910 and 1912, as will be seen where this exhibit discloses eighty consumers

less in 1912 than 1911, although the annual reports show a gain for each of these years over the year previous. It will be seen that the relative percentage during these years, 1907 to 1911, inclusive, was excessive in the gas department. Under this division these expenses were wrongfully loaded upon the gas department to the extent of at least 7 per cent of their total amount, which excess in dollars for the various years is as follows:

| | |
|---|---|
| 1909 | $1,225.56 |
| 1910 | 816.09 |
| 1911 | 1,452.26 |
| 1912 | 3,300.35 |

In the handling of the percentage figures by Mr. Lea, he has included in the total amount of property on which the net return is figured all additions to the plant made during the years in which the net returns were earned. This is unfair for the reason that these improvements and additions do not serve the public for the entire period, and as a matter of fact are seldom put into complete operation much before the end of the year and allowance for interest during construction is also charged by him into the capital account. This is one of Mr. Lea's many methods of taking advantage of the law of squaring numbers. Also in his total on which he has computed his net return he has included the sum of $127,834.00 for paving over mains, which must be eliminated. In addition to this amount for paving over mains there is the further sum of $16,898.00 that should be deducted for paving over service pipes, for which the gas company did not pay one cent. Paving over mains will be found in Exhibit "7-J" under the heading "Distribution System—Street Mains, Net Construction Cost of Tearing up and Replacing Pavement" $110,202, to which we have added 16 per cent for engineering, giving $127,834.00, which, as we understand it, has been carried into the present value totals undepreciated.

Paving over services will be found in Exhibit "7-J" (p. 1258, vol. 4) under the heading "Distribution System—Services, Net Construction Cost of Tearing up and Replacing Pavement" $14,567.00, to which he added 16 per cent for engineering, etc., and carried the resultant figure into the present value total undepreciated.

In the operating expenses is included the following sums for the respective years mentioned for the items of "promoting new business:"

1907 $13,394.04 (see p. 301, vol. 1, P. R., line 4 from bot.)
1908 $11,634.96 (see Exhibit "26," P. R., line 1507).
1909 $14,019.36 (see Exhibit "27," P. R., line 1507).
1910 $16,152.75 (see Exhibit "28," P. R., line 1507).
1911 $18,985.52 (see Exhibit "29," P. R., line 1507).
1912 $19,692.64 (see Exhibit "30," P. R., line 1507).

This company has a monopoly upon an absolute necessity. No one can buy gas except from it, and any money spent in promoting new business is a total waste. The money thus spent should be reflected in rate reduction.

***

Certainly this item should be eliminated from the operating expenses. The operating expenses, as shown by Mr. Lea, include all of the expenses of this litigation, which are not properly chargeable to operating expenses in ascertaining the net return as previously pointed out. These expenses amount to approximately the following cents per M. C. F. of gas sold for the respective years:

| Year | Cts. Per M. Cu. Ft. Gas Sold |
|---|---|
| 1907 | 0.71 |
| 1908 | 0.43 |
| 1909 | 0.42 |
| 1910 | 2.32 |
| 1911 | 3.15 |
| 1912 | 2.90 |

being the excess over light expense of the last normal year, to-wit: 1906. (See table, page 187 ante.)

There should also be deducted the excess paid for executive salaries, in cents per M. C. F. gas sold as follows:

| Year | Cts. Per M. Cu. Ft. Gas Sold |
|---|---|
| 1908 | 0.77 |
| 1909 | 1.20 |
| 1910 | 2.88 |
| 1911 | 2.37 |
| 1912 | 2.01 |

We have corrected Exhibit "7-P" to show the net earnings of complainant, on Mr. Lea's valuation, with the following result:

## EXHIBIT "7-P" (op. p. 1358, vol. 4)—CORRECTED.

| Year Ending December 31st | 1907 | 1908 | 1909 | 1910 | 1911 | 1912 |
|---|---|---|---|---|---|---|
| Gross Earnings Gas Dept. as Reported | $215,776.20 | $234,347.51 | $245,124.74 | $251,942.37 | $274,292.95 | $282,162.11 |
| Deduct Receipts from Gas Sales Outside Lincoln | 888.00 | 1,554.58 | 1,249.18 | 2,984.66 | 6,270.98 | 8,986.18 |
| Corrected Gross Earnings of Gas. Dept. | 214,888.20 | 232,792.93 | 243,875.56 | 248,957.71 | 268,021.97 | 273,175.93 |
| Non-operating or Miscellaneous Revenues (Ex. 153) | 100.00 | 56.00 | 115.77 | 109.15 | 4,653.88 | |
| Actual Gross Earnings Gas. Dept. in Lincoln | 214,988.20 | 232,848.93 | 243,991.33 | 249,066.86 | 272,675.85 | 273,175.93 |
| Total operating Expenses as Reported | 141,924.37 | 137,090.35 | 134,709.24 | 143,670.45 | 158,374.11 | 175,573.49 |
| Deduct Output Cost Gas Sold Outside of Lincoln | 302.88 | 464.27 | 321.17 | 566.73 | 1,184.38 | 1,873.62 |
| Deduct for— | | | | | | |
| 1. Portion cost gas sold outside, not deducted by Lea | 282.60 | 444.58 | 364.97 | 685.58 | 2,327.43 | 3,437.46 |
| 2. Excess common expense charged gas dept. | | | 1,225.56 | 816.09 | 1,452.26 | 3,300.35 |
| 3. New business expense | 13,394.04 | 11,634.96 | 14,019.36 | 16,152.75 | 18,985.52 | 19,692.64 |
| 4. Excessive legal expense | 1,250.38 | 815.20 | 752.00 | 4,659.72 | 3,955.66 | 5,896.09 |
| 5. Excessive executive salaries | | 1,370.32 | 2,136.08 | 5,749.75 | 4,920.13 | 3,814.04 |
| 6. Excessive incidental expense | | 795.79 | 1,562.94 | 782.16 | 2,722.29 | 2,050.00 |
| 7. Shortage gas making coal | | | | | | 100.00 |
| Total to deduct | 15,229.90 | 15,525.12 | 20,382.08 | 29,412.78 | 35,547.67 | 40,164.20 |
| Leaving | 126,684.47 | 121,586.25 | 114,326.16 | 114,257.67 | 122,826.43 | 135,409.29 |
| Add for correction Gas Coal Shortage | | | 100.00 | | | |
| Add for proper adjustment Residuals | 807.38 | 877.31 | 914.14 | 940.26 | 1,004.47 | 1,027.38 |
| Corrected Operating Expenses | 127,501.85 | 122,442.56 | 115,340.30 | 115,197.93 | 123,830.90 | 136,436.67 |
| Corrected Net Earnings Gas Department | 87,386.35 | 110,406.37 | 128,651.03 | 133,868.93 | 148,844.95 | 136,739.26 |
| % Net Return on Lea's Present Value | 10.5 | 12.6 | 13.2 | 13.02 | 13.6 | 12 |

On the basis of Mr. Lea's present valuation for January 1, 1913, as corrected by him, (Ex. 426, page 2063, vol. 4), viz, $1,090,913, after deducting therefrom the sum of $144,732, included by him for paving over mains and service pipes which were laid before the city paved the streets, then deducting from his total receipts one-sixth of the amount to reduce to the $1.00 basis, and eliminating $7,050 occupation tax which he included in his operating expenses his net return on his own valuation thus modified, and at the $1.00 rate would be 6.53%. And we must remember, too, that Mr. Lea's present value includes $225,000 as a separate item of going value, some property outside of Lincoln, all of the value of the East Lincoln holder, (used primarily to furnish pressure for the suburbs), and a working capital several times larger than any ever used by the company, and also over $30,000 of service pipes paid for by gas consumers and which the master eliminated.

**FINAL DEDUCTIONS AS TO NET RETURNS.**

**1. With operating expenses reduced to the normal of other companies.**

Mr. Adams, in Exhibit "342," (top p. 1592, vol. 5) shows in cents per thousand cubic feet of gas sold what the salaries, office, distribution and general expenses of the complainant should properly be for the years 1905 to 1912, inclusive, beginning with 15 cents for 1905 and ending with 12 cents in 1912. He substantiates his estimate with Exhibit "349," (p. 1595, vol. 5) which shows what twenty-four different plants in Massachusetts, six of them having an output within the range of the output of the complainant, during the period from 1905 to 1912, paid for these expenses. He has also shown, in Exhibits "283" to "290," inclusive, that these items have cost the complainant all the way from 23.10 cents in 1905 to 31.12 cents in 1912 per thousand cubic feet of gas sold.

In Exhibits "283" to "290," inclusive, (p. 1483 to 1490, vol. 4) Mr. Adams has set out all of the expenses except the materials and labor, making gas, repairs, renewals and taxes actually incurred by the complainant. The items included in these exhibits correspond with the items covered in Exhibit "349." Included in Exhibits "283" to "290" are the items, Promoting New Business, Executive Salaries, Legal Expenses and Incidental Expenses, the history of which during the last six years is very enlightening, and is set out below in cents per thousand cubic feet of gas sold:

| | | Ex. 101 | | | | | | |
|---|---|---|---|---|---|---|---|---|
| | | Ex. C | P. R. | Ex. 26 | Ex. 27 | Ex. 28 | Ex. 29 | Ex. 30 |
| | Line | 1906 | 1907 | 1908 | 1909 | 1910 | 1911 | 1912 |
| Prom. new bus. | 1507 | .0874 | .0747 | .0596 | .0686 | .0769 | .0835 | .0840 |
| Executive sal. | 1500 | .0182 | .0179 | .0256 | .0299 | .0467 | .0416 | .0380 |
| Legal expense | 1505 | .0049 | .0120 | .0092 | .0091 | .0281 | .0364 | .0339 |
| Incidental exp. | 1503 | .0139 | .0096 | .0137 | .0182 | .0137 | .0227 | .0204 |

It will be seen by a comparison of the column for the year 1906 with the column for the year 1907 in the above table that these items of expense show the normal course under the circumstances, the only increase being in legal expenses, which was due to this litigation, which commenced on or about the 1st of January, 1907. The abnormal increase commences with the year 1908 and continues throughout the years 1909 to 1912, inclusive. The increase of the legal expenses in the year 1912 over 1906 is almost 600 per cent. The increase in executive salaries from the last normal year, 1907, to 1912 was 2.39 cents per thousand cubic feet of gas sold, or almost 150 per cent. The other two items, should be eliminated entirely for the reasons heretofore given. The elimination of these two items, the excess in executive salaries, and legal expenses above pointed out calls for the reduction in the complainant's operating expenses of 9.14 cents per thousand cubic feet for the year 1907, 8.17 cents for the year 1908, 10.30 cents for 1909, 14.26 cents for 1910, 16.14 cents for 1911, and 15.35 cents for 1912.

In addition to these amounts there should be deducted from the operating expenses the expenses of the district holder station, and for furnishing pressure to the suburbs, which, for the year 1911, was .64 of 1 cent per thousand cubic feet of gas sold. Also for the year 1912 there was charged into the operating expenses $800 for a shortage in the coal stock appearing after the discontinuance of the manufacture of coal gas. This expense was properly chargeable to the manufacture of coal gas during the last year or so that the company was manufacturing coal gas, and was included in its operating expenses for the year when purchased, and then if these general expenses covered by Mr. Adams in his Exhibits "283" to "290," inclusive, are divided or apportioned between the gas and electric departments, upon the basis of the number of consumers in each department, there is still a further reduction to be made in the amount apportioned to the gas department for the reason that, as shown in Exhibit "101," the percentage of gas consumers in 1912 is 73, and the percentage of electric consumers is 27, while the division of these expenses has been made since some time in 1908 upon the basis of 80 per cent to gas and 20 per cent to the electric department. This would affect the items of general expense included in Mr. Adams' Exhibits "283" to "290," inclusive, to the extent of 8 3/4 per cent for 1912 and varying percentages back to 1908. After computing this through the various years mentioned, we find that the net amount of expense chargeable for the items covered by Mr. Adams' exhibits "283" to "290," inclusive, should be as set out in the first column below, which we will compare with Mr. Adams' figures as set out in the second column, as follows:

| | Company's Corrected Expense | | Adams' Estimate |
|---|---|---|---|
| 1907 | 11.32 | 1907 | 13.50 |
| 1908 | 12.04 | 1908 | 13.00 |
| 1909 | 10.93 | 1909 | 12.5 |
| 1910 | 13.44 | 1910 | 12.5 |
| 1911 | 13.34 | 1911 | 12. |
| 1912 | 13.08 | 1912 | 12. |

Extended into dollars, we have:

| | Company's Corrected Expense | | Adams' Estimate |
|---|---|---|---|
| 1907 | $20,294 | 1907 | $24,214 |
| 1908 | 23,525 | 1908 | 25,400 |
| 1909 | 24,514 | 1909 | 25,535 |
| 1910 | 28,246 | 1910 | 26,271 |
| 1911 | 30,317 | 1911 | 27,272 |
| 1912 | 30,657 | 1912 | 28,126 |

The excess of the complainant's expenditures over the above amounts for these items is as follows:

| | Company's Corrected Expense | | Adams' Estimate |
|---|---|---|---|
| 1907 | $16,618 | 1907 | $12,698 |
| 1908 | 16,541 | 1908 | 14,666 |
| 1909 | 23,323 | 1909 | 21,302 |
| 1910 | 30,689 | 1910 | 32,665 |
| 1911 | 38,373 | 1911 | 42,418 |
| 1912 | 42,287 | 1912 | 44,818 |

Deducting this from the reported operating expenses for the years 1907 to 1912, we have as the corrected operating expenses for:

| | |
|---|---|
| 1907 | $129,226 |
| 1908 | 122,434 |
| 1909 | 113,406 |
| 1910 | 111,005 |
| 1911 | 115,956 |
| 1912 | 130,755 |

To which must be added the allowances made by Mr. Adams for depreciation, renewals and repairs ( Exhibit "430½," p. 1632, vol. 5), less what the complainant expended for that purpose (Exhibit "309," bot. p. 1496, vol. 5), which gives as the proper total amount to be deducted from the gross earnings, to show the net revenue:

| | |
|---|---|
| 1907 | $132,448 |
| 1908 | 131,104 |
| 1909 | 122,687 |
| 1910 | 119,199 |
| 1911 | 121,512 |
| 1912 | 140,139 |

Deducting the above amounts from the gross receipts reported from the sales of gas within the city of Lincoln, corrected for the difference between $1.20 per thousand and $1.00 per thousand, we get the following net revenue for the respective years:

| | |
|---|---|
| 1907 | $ 46,567.00 |
| 1908 | 62,610.00 |
| 1909 | 80,332.00 |
| 1910 | 87,725.00 |
| 1911 | 102,056.00 |
| 1912 | 87,159.00 |

On Mr. Lea's corrected valuation, as of January 1, 1913, $1,090,913 (Exhibit "425-A"), the above net income for 1912 ($87,159), would be at the rate of 8 per cent. On Mr. Lea's valuation with all paving ($124,769) eliminated, the return would be 9.2 per cent. On Mr. Lea's valuation with all paving and going concern eliminated, the return would be 11.7 per cent. On Mr. Lea's valuation with all paving, going concern and all property outside the city limits eliminated, the return would be 12.3 per cent. On Mr. Lea's valuation with all paving, all property outside the city limits, the East Lincoln holder, and going concern eliminated, the rate would be 12.8 per cent.

On Mr. Adams' valuation as of January 1, 1907, $299,915, the net income for that year of $46,567, would be a return at the rate of 15.5 per cent. On Mr. Adams' valuation as of January 1, 1913, $435,745, the net income for that year, $87,159, would be a return of 20 per cent. On Mr. Adams' valuation as of January 1, 1907, with deductions of useless and unused property, and also eliminating paving over mains, the net income for that year would be 17 per cent. On Mr. Adams' valuation as of January 1, 1913, same items of property eliminated, the net income for that year would be 23.2 per cent.

**2. By Eliminating a Few of the Larger Items of Expense.**

As we have pointed out, the Company lost on the sale of gas appliances in 1912 the sum $7,301.93 and charged this loss into its operating expense for that year.

There was charged into the operating expenses for the same year $19,692.64 for promoting new business. The master allowed $12,000 of this to stand.

There was also included in the operating expenses for that year $7,954.73 for legal expense. The legal expense for the year 1906 before this present suit was started was $757.43. The increase has been wholly chargeable to this rate litigation. The legal expense for 1912 was therefore excessive by $7,000 for the purposes of testing this rate.

In order to have a display window on a prominent corner for displaying its gas and electric appliances, complainant pays $450 per month in rent, instead of using an office just as serviceable for the gas business on a side street at from $100 to $150 per month. The rent is therefore excessive to the extent of $3,600 per year.

The executive salaries paid to the New York office are wholly unnecessary. The master eliminated part of them. They should all go out. The above mentioned items should all be deducted from the operating expenses allowed by the master for 1912, viz:

| | |
|---|---|
| Loss on appliances | $ 7,301.93 |
| Amount of new business expense allowed | 12,000.00 |
| Excess legal expense due to this suit | 7,000.00 |
| Excess office rent | 3,600.00 |
| President's salary, allowed by master | 2,400.00 |
| Salary of New York secretary | 300.00 |
| Total | $32,601.93 |

After allowing all of the above items as a part of the operating expenses for 1912, the master found that the net income for 1912 at the $1.00 rate would have been $46,658, or 6.9 per cent on the then present value of the property of complainant, including $40,000 of going value, and without taking into account probable increased sales under the new rate.

If we eliminate the above items from the operating expenses and allow all the rest of the master's figures to stand the net return would be $79,259, or over 11.7 per cent on his then present valuation.

## CONCLUSIONS.

This complainant is not being oppressed by the city of Lincoln. Prior to the passage of the rate ordinance here attacked, the Company sold gas at such prices as it saw fit to charge. It has always had a monopoly of the gas business in the city of Lincoln. Lincoln is now, and for the last twenty years has been, one of the most prosperous cities of its size in the west. We doubt if there can be found a city of its size in the United States where there is less poverty and

more genuine prosperity. The city is more prosperous and is growing more rapidly now than at any time in its past history. It is a city of comfortable modern homes and the citizens spend their money freely for all that tends to contribute to their comfort. No one would think of building a home in Lincoln without installing gas service if within reach of the gas mains. Practically all cooking is done with gas. At the time this ordinance was passed, gas was selling in western cities of the size of Lincoln and less, at from ninety cents to one dollar per M. cubic feet (see table, page 1602, vol. 5). And in cities farther east where gas consumption was practically the same as in Lincoln and where the cost of making and distributing gas was substantially the same, patrons were getting gas from seventy-five cents to one dollar per M. cubic feet (see table, page 1603, vol. 5). This city felt that it was entitled to get its gas at terms as favorable as those prevailing in other cities similarly situated as to location, population and gas consumption, and we think the evidence contained in the record in this case clearly demonstrates that they were not only right but that they were and are entitled to a still further reduction of the rate.

We submit that the judgment, dismissing the bill in this case, should be affirmed.

Respectfully submitted,

C. PETRUS PETERSON, and
WILLIAM M. MORNING,

*Attorneys for Defendants.*

## ADDENDUM.

*Comparison of Master's Valuation of Physical Properties with Valuation of the Same Properties by the Company's Expert Witness, Mr. Lea.*

| | | |
|---|---|---|
| The master's total valuation Jan. 1, 1913, as per his report | | $676,565 |
| Deduct: | | |
| Working capital | $60,000 | |
| Going value | 40,000 | |
| | | 100,000 |
| Master's valuation of physical property | | $576,565 |
| Mr. Lea's valuation Jan. 1, 1913 (Appellant's Brief, p. 108) | | 1,090,913 |
| Deduct: | | |
| Working capital (Appellant's Brief, p. 219) | $72,037 | |
| Going value (Appellant's Brief, p. 19) | 225,000 | |
| Paving over mains (Appellant's Brief, p. 17) | 142,291 | |
| Services paid for by consumers (Master's report) | 30,484 | |
| Organization, legal expense, etc., included by Mr. Lea over and above allowance for overhead expense (Appellant's Brief, p. 30) (Discussion of elements entering Printed Record, p. 417) | 33,000 | |
| | | $502,812 |
| Lea's valuation of physical property | | 588,101 |
| Master's valuation | | 576,565 |
| Total difference between Master and Lea | | $11,536 |

This comparison shows an actual difference in valuation of less than 2 per cent. In these figures inhere all the elements going to form the valuation, net construction cost, reproduction cost, depreciation, and present condition. So far as valuation is concerned it is of small consequence what the intermediate steps were in forming the conclusion, the conclusion only can influence the result of this litigation.

## SUPPLEMENTAL BRIEF OF APPELLEES.

---

*To the Honorable Justices of the Supreme Court of the United States:*

By reason of the fact that brief of appellant was filed out of time it was impossible to include in appellee's brief a reply to some of the arguments therein set forth. In order to have such reply before the court in the form of a brief, this supplemental brief is presented:

1. *The Complaint About the Master's 1907 Valuation.*

When Judge Sullivan, as special master, went over the record before him, he found all valuations presented by the appellant to be as of January 1, 1913. By theoretical proc-

esses the company's expert witness, Mr. Lea, with 1913 as a starting point, but without a separate valuation for 1907, sought to establish the value of the property as of the earlier date. Mr. Lea's valuation for 1913, being the depreciated value for that year, was $1,090,913, and his 1907 valuation on the same basis was $784,682, a difference in values between the two dates of $306,231. The master found a difference in value of $240,000, or $66,231 less than Mr. Lea's figures. While the master is $66,231 below Mr. Lea, complaint is made that the master's figure is too high.

Counsel contend that Judge Sullivan has fallen into a serious mathematical error. It is apparently the contention that the master was presented with a problem in arithmetic and that he has not followed the rules of arithmetic in its solution. It had not occurred to us that this appeal was for the purpose of grading Judge Sullivan on his mathematics, though we should not fear the result if that were the purpose, but we assume that the question on the appeal is the correctness of the result rather than the class-room inquiry as to mathematical formula.

Ingenious as the argument first appears, that the master has deducted the value of the additions to the plant made between 1907 and 1913, thereby leaving the 1913 value of the properties found in 1907 as the 1907 values of such properties, the argument fails when measured by the language of the report. The fallacy of the argument consist in indulging the unwarranted presumption that the master, for purposes of the inquiry, divided all properties of the company into two classes, properties found in 1913, which were in existence in 1907, and properties found in 1913, which were not in existence in 1907, and that the combined value of the two classes was $676,565, and the properties of the latter class $240,000. That this is not in accord with the facts, clearly appears from the master's report (Printed Record, p. 52).

> "If the value of plaintiff's property, tangible and intangible, on January 1, 1913, was $676,565, as I

> have found it to be, its value January 1, 1907, may be readily ascertained by eliminating all *values* added to the plant between these dates. The construction account shows the original cost of all such additions to the physical property to be $210,437. An estimate given by Mr. Lea increases this amount to $371,294; and by an addition of $108,664 for going value, working capital, organization and legal expenses, he further increases it to $479,958. According to Mr. Adams' estimate, the tangible property was worth $135,830 less January 1, 1907, than on January 1, 1913. Just what the actual increase of structural cost was is not entirely clear, but from a full consideration of the evidence, I find that all *values* tangible and intangible added to the plant between January 1, 1907, and January 1, 1913, were worth, at the latter date, $240,000. Deducting this amount from $676,565, the value of January 1, 1913, leaves $436,656 representing the investment upon which the company was entitled on January 1, 1907, to receive a fair return."

The master clearly, sharply, and unerringly distinguishes between additions to the physical property and "added values." Throughout the record it is conceded that the company has not kept a separate replacement account, but all replacements have been charged to an account known as repairs and maintenance. (See Printed Record, pp. 756 and 1293, testimony Mr. Phillips.) It is also clear from the record that another account, known as the construction account, was kept, into which went all items representing new construction, or such cost of a replacement item as the cost of the unit put in exceeded the cost of the unit replaced. The master allowed a depreciation reserve in 1907 of $10,000 per annum and in 1913 of $12,000 per annum. It is not contended that this depreciation reserve has been set aside, or that it was on hand at the time of the hearing, but on the contrary, it appears that it had been spent to keep the plant in proper condition and to conserve at par the value of the plant.

Appellant's argument proceeds on the premise: "The company's property, beginning 1907, is depreciating at the rate of $10,000 per year." The conclusion drawn is: "The company's 1907 property in 1913 is therefore worth $60,000 less than in 1907." This appears plausible until it is remembered that each year the company has collected just those $10,000 and spent them to keep the property worth the same in 1913 as in 1907. This is a standing and unvarying "value." Anything added beyond that is "added values," as used in the report of Judge Sullivan; not added property, but "added values." It is entirely proper, and does not constitute even a mathematical error and still less an error in result, to deduct such added values from the 1913 depreciated valuation to determine the 1907 value. Doing so is just another way of saying that the plant was worth in 1913 $240,000 more than it was worth in 1907.

2. *Appellant's Argument on Going-Value.*

Appellant has in its brief (pages 70 *et seq.*) taken a position on going-value which is fallacious for two reasons:

(1.) It is assumed that the master found a going-value of $140,000 and eliminated therefrom $100,000. This is in direct conflict with the express language found in the master's report, where the master states: "The record shows that between 1906 and 1913 the company paid out of its earnings and charged to operating expenses about $100,000 for the promotion of new business. In view of this fact, I conclude that an allowance of $40,000 for going-value is sufficient."

The argument that this $100,000 found by the master to have been expended for the promotion of new business and charged to operating expense forms a part of going-value, is the most direct and admitted capitalization of surplus earnings which could very well be conceived. That this is appreciated by counsel for appellant appears very clearly

from the statement of the argument. So manifest is the position taken that appellant asks for a reversal of the recent case of Des Moines Gas Company *vs.* Des Moines, 238 U. S., 153 (Appellant's Brief, p. 85). Counsel agrees that there is no evidence in the record of any early losses which should be taken into account in fixing going-value, but it is contended very frankly that, in the absence of any such expenditure in the early history for that purpose and in the face of the record that in recent years all expense for doing the things which, when paid for out of capital as distinguished from earnings, makes going-value, have been charged to operating expense, whatever cost can be assumed for a theoretical plant as being necessary for the obtaining of business shall be capitalized. It is submitted that this argument is unsound in theory and in direct conflict with the decisions of this court. It is more than probable that if at the time the master filed his report the Des Moines case had been decided, he would have eliminated entirely the element of going-value as a separate item, which appellees in the original brief have argued should have been done. Whatever may be said as to that proposition, it certainly is contrary to the record to contend that the master found the valuation for going-value of $140,000.

(2.) Appellant's position is also fallacious because of the assumption that the master, by the expression used by him to the effect that it was not clear whether this element of plant value had been paid for out of excess earnings or out of capital, has assumed that there were in fact excess earnings in the past. It is not necessary for the master to have assumed anything with reference to the past. Going-value does not rest on any assumption. The burden is on the utility to show affirmatively that there has been invested in going-value a portion of its capital as distinguished from earnings. The item of going-value if properly allowable for purposes of rate regulation under any circumstances can be allowable only when the owners of the utility can show:

(1.) That capital as distinguished from earnings was expended to obtain business, and (2) that the capital so expended has not been amortized or replaced by excessive earnings. In other words, there is no presumption in favor of going-value and if allowed it must rest on affirmative proof.

### 3. *Effect of Omitting from Calculations in the Report of the Master the Occupation Tax.*

One thing has taken place since the report of the master and since the decision by the lower court which is of such importance as to require specific comment, namely, a final adjudication by the Supreme Court of the State of Nebraska holding the occupation tax ordinance affecting the 1907, 1908, and 1909 earnings of the company as invalid and unenforcible (City of Lincoln *vs.* Lincoln Gas & Electric Light Company, 100 Nebraska, 182).

We had anticipated that appellant would frankly admit this fact, and therefore have not set out the results in detail in the original brief.

The earnings of the company in 1907 are not in dispute. With gas selling at $1 per M, the occupation tax taken into consideration by the master in computing the net earnings for the company of that year amounted to $4,466. With this allowed as a proper operating expense the master found, without any allowance for increased output had the new rate been put into effect, a return of 5.12 per cent. With this rate of return the sum of $4,463 would be the return on a capital investment of $87,224, or $27,000 more than counsel claim the master erred in arriving at his 1907 valuation. On the valuation found for that year, namely, $426,565, it would increase the percentage of return from 5.12 per cent to 6.14 per cent.

The Supreme Court also reversed the Nebraska District Court on overruling a plea in abatement in an action involv-

ing a subsequent occupation tax ordinance passed December 13, 1909, and remanded the case to the district court to abide the result of the present case in this court. Deducting the amount allowed by the master for occupation tax in 1913, namely, $8,195, would increase the percentage of return on the valuation found for that year from 6.9 per cent to 8.1 per cent. At 6 per cent the amount involved in the occupation tax for 1913 would be a return on a capital investment of $136,583.

These items should be considered, and as to the years 1907, 1908, and 1909 the amount should clearly be eliminated, all questions having been set at rest definitely and conclusively for all time by the Nebraska Supreme Court. Appellees contend, as in the original brief set forth, that the same should be done with the 1913 occupation tax allowance, inasmuch as the payment has not been made, in fact, and the company has resisted its payment in court and the Supreme Court of the State of Nebraska has declined to permit its collection by judgment.

### 4. *The Sloan & Huddle Appraisement.*

In the course of the trial before the master an item was discovered showing the expenditure of at least the sum of $2,650, in favor of an engineering firm of Madison, Wis. (Printed Rec., pp. 1261-2). Repeated requests were made by the city for the production of the report made by the engineers to the company, for the purpose of ascertaining what their findings were. In spite of the most persistent endeavor on the part of the appellees to obtain the report, or to elicit from witnesses the result and findings, the company declined to give the master the benefit of the appraisement made. Commenting on this matter in the report, the master said:

> "Whether this conduct constituted technically a suppression of evidence, I do not determine, for I have not grounded any presumption or inference

upon it. It has, however, emphasized the need of exercising more than ordinary care to see, where the validity of a law or ordinance depends upon disputed questions of fact, that the dispute be not resolved against a legislation where there is any reasonable doubt about what the truth is."

After the master's report had been filed and after exceptions had been filed thereto, the appellant, through its counsel, filed in the United States District Court, District of Nebraska, Lincoln Division, in this case, an application for an order authorizing and permitting the taking of testimony with respect to the services of Sloan & Huddle and the report submitted by them. This application is set forth on pages 75 and 76 of the printed record, and is as follows:

"*Application of Plaintiff for an Order Permitting Taking of Further Testimony.*

"Filed in United States District Court, District of Nebraska, Lincoln Division, June 14, 1915.

"The Lincoln Gas & Electric Light Company moves the court for an order authorizing and permitting the taking of further testimony in the above-entitled case with respect to the services of Sloan, Huddle, etc., Company, the scope of the employment and services rendered, and report, if any, submitted by said Sloan, Huddle, etc., Company, of Madison, Wisconsin, referred to in the special master's report herein, and submit in support of this motion and application copy of letter written by Halleck F. Rose under date of August 7, 1914, to Mr. Huddle of the above-named firm and the answer thereto from Mr. Huddle of the above firm; the testimony in view of the master's finding is material and could not have been anticipated by complainant from the state of the record.

"LINCOLN GAS & ELECTRIC
LIGHT COMPANY,
"By E. C. STRODE,
"HALLECK F. ROSE,
"*Its Attorneys.*

"Copy.

"AUGUST 7, 1914.

"Mr. Huddle, c/o Engineering Department Wisconsin Railway Commission, Madison, Wis.

"DEAR SIR: You will recall that I met you at Lincoln in the Gas Company's office in connection with the Lincoln Gas & Electric Light Company's preparation for its gas rate suit. In considering with you propriety of calling you as a witness in this rate suit, the question arose as to the embarrassment and disadvantage to which you would be subjected as an expert witness in handling such matters as the cost of developing business, or 'going-value,' overhead allowances, annual depreciation apart from general repairs, and maintenance and the like, upon which the Wisconsin Commission, in whose services you are, had made numerous rulings. You were frank to say that in these matters it would be quite embarrassing to yourself and possibly to the Commission which you served, to express an independent judgment in an important court proceeding that should be variant from the conclusions reached by your commission. In these circumstances we conclude that the proprieties were against calling you at all, although your inventory valuations of the physical properties of the company were understood to be not only just and fair, but altogether satisfactory to the Lincoln Company. The company called Mr. H. L. Lea as a witness on value and has submitted its case. I have never had access to any report of detailed valuations of the company's physical properties made by you, and in the trial no consideration was given to your valuations because they were not qualified by your personal testimony.

"At the argument it was insinuated by the city's attorney that your valuations, in so far as you made any, were unfavorable to the position of the company and favorable to the city, and the fact that the company failed to produce any report from you, should count against it. As counsel for the Lincoln Company, I would greatly appreciate it if — your

data acquired in your Lincoln examination you will state to me, in a letter, the aggregate sum which you found to be the reproductive value of the Lincoln Gas & Electric Light Company's physical properties in use in its gas department, and also what you found to be the present depreciated value of the same properties, stating at the same time that these valuations excluded any allowance for 'going-value' or cost of a perpetual franchise.

"It is my impression that there was no radical difference between you and Mr. Lea on the valuations of the company's physical properties, and if we conclude it is proper to do so, we would like leave to hand your letter in reply to this, to the special master, in order to prevent any suspicion on his part that your failure to testify in the case was due to low valuation of the company's properties, as insinuated, without foundation, by the city's attorney.

"I should appreciate your prompt reply very greatly.

"Very respectfully,

"(Signed) HALLECK F. ROSE.

"MADISON, August 14, 1914.

"Messrs. Stout, Rose & Wells, 524 National Bank Building, Omaha, Nebraska.

"GENTLEMEN: In accordance with your request we hand you herewith figures showing the cost new and cost less depreciation which we found for the value of the gas property of the Lincoln Gas & Electric Light Company in our appraisal of January, 1913:

| | Cost new. | Depreciated value. |
|---|---|---|
| 1. Land | 14,360 | 14,360 |
| 2. Buildings | 32,856 | 25,164 |
| 3. Plant equipment | 90,239 | 69,779 |
| 4. Holders | 91,578 | 78,678 |
| 5. Mains | 191,648 | 165,559 |
| 6. Services | 56,224 | 39,919 |
| 7. Meters and governors | 79,757 | 69,616 |
| 8. General equipment | 14,858 | 12,668 |
| Total, items 1-8 | 571,520 | 475,743 |
| 9. Engineering, superintendence interest during construction, etc. 15% | 85,728 | 71,361 |
| Total, items 1-9 | 657,248 | 547,104 |
| 10. Working capital, material and supplies | 17,645 | 16,873 |
| Other than material and supplies | 37,354 | 37,354 |
| Total, items 1-10 | 712,248 | 601,331 |
| 11. Repaving | 159,851 | 129,171 |
| Total, items 1-11 | 872,099 | 730,502 |
| 12. Land held but not used | 4,100 | 3,980 |
| Grand total | $876,199 | $734,482 |

"You will note that the figures above include no allowance for going value, good will or franchise value.

"Trusting that this is the information you desire, we are,

"Very truly yours,

"SLOAN, HUDDLE, FEUSTEL & FREEMAN,

"(Signed) Per W. F. HUDDLE."

"R. L. F. M."

In view of the fact that counsel for the company state that the inventory valuations of the physical properties of the company as found by this firm of engineers were "not only just and fair, but altogether satisfactory to the Lincoln Company," it is a matter of interest to compare the valuations made by them with the valuations fixed by the master. The master includes all the physical properties under four items, as follows:

| | |
|---|---|
| Real estate | $16,250.00 |
| Buildings | 29,381.00 |
| Work equipment | 179,310.00 |
| Distribution system | 351,624.00 |
| Physical plant plus 12½% overhead | $576,565.00 |

Sloan & Huddle set up their valuation as follows:

| | |
|---|---|
| Real estate | $14,360.00 |
| Buildings | 25,164.00 |
| Plant equipment | 69,779.00 |
| Holders | 78,678.00 |
| Mains | 165,559.00 |
| Services | 39,919.00 |
| Meters and governors | 69,616.00 |
| General equipment | 12,668.00 |
| Physical plant net | $475,743.00 |
| Overhead 15% | 71,361.00 |
| Physical plant plus 15% overhead | $547,104.00 |
| Deducting 2½% overhead | 11,893.00 |
| Physical plant plus 12½% overhead | $535,211.00 |
| Adding item "land held but not used" | 3,980.00 |
| Physical plant, Sloan & Huddle | $539,191.00 |

It will be seen that not only is the Sloan and Huddle valuation corroborative of the master's findings, but it is undisputed evidence that the master has been more than fair in his findings to the company.

In order to make an absolute comparison between the two valuations there should be deducted from the Sloan & Huddle valuation the item disallowed by the master for services paid for by consumers in the sum of $30,484. Deducting this from the total found by Sloan & Huddle, namely, $539,-191, leaves the findings of Sloan & Huddle of the total physical property, plus 12½% overhead at $508,707, or $67,858 less than the valuation placed upon the same physical properties with the same overhead by the master.

This item was before his honor, Judge Page Morris, when he overruled the exceptions to the master's report.

### 5. *Rate of Return.*

On the subject of rate of return, appellant, in its brief, at page 44, says:

> "We submit that the finding of the master that a return of 6% would not be confiscatory, is absolutely without justification."

History is a better guide than prophesy where history is available. A large portion of the assets of the company had to be recapitalized on or before August 1, 1917. Under the laws of the State of Nebraska, of recent years, the State Railway Commission has jurisdiction over questions relating to the issuance of stocks and bonds by public utilities. Accordingly, on April 26, 1916, the company, appellant herein, applied for leave to issue and sell $733,400 of its bonds to run to December 1, 1941, at 5 per cent. An order was issued authorizing the sale of these bonds on a basis to net to the company not less than 86 cents on the dollar of the par value and accrued interest. This is at an interest rate of 5.8 per cent. To this is to be added an amortization fund to repay

the par value in 1941, making the capital cost almost exactly 6 per cent per annum. This order of the Railway Commission is to be found in the official 9th Annual Report of the Nebraska State Railway Commission at page 317.

In view of the fact that appellant has cited decisions of the Nebraska State Railway Commission to support its argument for a higher rate, this decision is cited as authority to support the master. It seems evident that the best authority on which to determine what capital requires by way of return in the business in which appellant is engaged is the actual rate paid for capital by the appellant. All of the capital is either in the bond issue authorized by the order cited, or a portion of the same bond issue sold prior to that order drawing 5 per cent interest. What is the use of speculating on hypotheses when facts are available? The question of cost of capital has been settled until the year 1941.

6. *Application of Average Net Revenues for the Years* 1907 *to* 1912, *Inclusive, to an Average of Master's Valuation.*

In commenting on the years intervening between 1907 and 1912, the master in his report says:

> "I do not go into the accounts for the years between 1907 and 1912, as the calculations made by Mr. Lea show beyond question that the net income was for each of these years from 50 per cent to 100 per cent greater than in 1907."

It is apparent that any of these years possess as much evidential value to determine whether the ordinance is or is not confiscatory as the years specifically dealt with. In other words, the record tests the ordinance by the severest test possible by picking out the two lean years and ignoring four fat years. To show the result of this severe test, we submit the following computation:

The gross receipts for the six years as reported by the company amount to $1,481,768. The gross expense for the same years, including all the excessive items pointed out by the master, is $886,615. The receipts stated are on the sale of gas at 1.20 per M cubic feet. Applying the rate fixed by the ordinance reduces the gross receipts by one-sixth and leaves $1,234,807. Deducting the gross expense of $886,615 leaves a net receipt of $348,192. During the first three years the occupation tax question has been eliminated. Assuming, for the sake of argument, that it should be deducted for the three remaining years we find that it amounts to $19,755 on the returns based on the dollar rate. The master allowed a depreciation reserve in 1907 of $10,000 and in 1913 of $12,000. Averaging the depreciation reserve at $11,000 a year the total is $66,000. Deducting this depreciation reserve and occupation tax there is left a net return of $262,437 for six years, or an average annual net return of $43,739. The valuation found by the master in 1913 is $376,565 and in 1907 $436,565. The average valuation is $556,565. Applying the average net return to the average valuation leaves an average rate of return of 7.85% during the entire six years without any allowance for increased output by the reduced rate and without deduction of any improper items of expense either eliminated or criticised by the master. We submit that a legislative rate which over a period of six years averages a rate of return of 7.85% is not only not confiscatory but is a liberal rate. Had the ordinance been complied with, with resulting increased output, and the large expense of this litigation, all of which is now included in the computation saved, the rate of return would beyond question have far exceeded 8%.

### 7. *The Cry of Bankruptcy.*

Much ado is made over the distress in which the appellant company will find itself if this decision is sustained by this court. It is suggested that an affirmance of the decree of the lower court will leave the company with little or nothing. That same question was before the Nebraska Railway Commission when the question of authorization of a new bond issue was presented and in the same order cited herein the Nebraska Railway Commission finds from evidence adduced by the company that the company had accumulated, and on March 31, 1916, had a surplus in the amount of $703,-555.39, which, according to the testimony, as stated by the Commission, was "surplus earnings over and above the payment of operating expenses, taxes, and interest on fixed charges, which surplus earnings have been accumulated from the operation of the company since 1901." This is such a shock absorber that it is submitted that the distress complained of will never become a reality.

Respectfully submitted,

C. PETRUS PETERSON,
W. M. MORNING,
*Attorneys for Appellees.*

# LINCOLN GAS & ELECTRIC LIGHT COMPANY *v.* CITY OF LINCOLN ET AL.

APPEAL FROM THE DISTRICT COURT OF THE UNITED STATES FOR THE DISTRICT OF NEBRASKA.

No. 52. Argued October 5, 8, 1917.—Decided June 2, 1919.

A gas company, pending a suit to declare a rate ordinance confiscatory, put the rate in effect as a test, under a stipulation that such action should not be construed as an acceptance of or compliance with the ordinance or be "shown in evidence or presented to the court in the above entitled cause, or used in any way by either party to influence the action of the court in the disposition of the case." *Held*, that this in effect relieved the defendant from obligation to observe the

effect of the reduced rate or prepare to meet inferences drawn from it, and hence afforded a reason why a petition for leave to file a bill of review in the District Court, based on the test, should not be granted by this court. P. 261.

Further grounds for refusing such leave are found in the delay of the plaintiff in instituting the test and in the fact that the results relied on were offset by an error committed in the plaintiff's favor. P. 262.

The District Court, having acquired jurisdiction through a bill presenting a substantial controversy under the Federal Constitution, has power to dispose of an issue fairly within the pleadings, without passing on its federal aspect, by application of the constitution of the State. P. 263.

In a suit challenging the constitutionality of ordinances fixing gas rates and laying an occupation tax, where the District Court upheld the rates but declared the tax void, and, after an appeal in which the tax ruling was not assigned as error or referred to by this court in its opinion or mandate, the rate, on a further trial, was again sustained and the bill dismissed by a final decree, without further mention of the tax, *held*, that the earlier adjudication was to be taken as a part of the final decree, establishing beyond collateral attack in this court or elsewhere that the tax was void; but that the decree might properly be modified to reiterate such earlier adjudication. *Id.*

In a rate case, involving questions, and much evidence, concerning plant valuation, methods of estimating and applying depreciation charges, working capital, going concern value, rate of return, etc., this court is not called upon to recite the substance of such evidence or review the master's findings made after proper investigation. P. 266.

Eight per cent. being the lowest rate generally sought and obtained upon capital invested in banking, merchandising and other business in the vicinity, and 7 per cent. the legal rate in the State, the court cannot approve a finding that no rate yielding as much as 6 per cent. could be deemed confiscatory in the case of the complaining gas company; nor is the finding justified upon the ground that the company had such a monopoly and guaranty of profits as would permit of such restriction. P. 267.

In the absence of any finding or clear evidence that past earnings, invested in a gas company's business, were excessive, a finding restricting the "going value" on the theory that they were, is erroneous. *Id.*

In such a suit, occupation taxes which have been conclusively adjudged void and have not been paid should not be allowed as operating expenses. P. 267.

Having regard for the entire period under investigation, and in the presence of many doubtful items, this court can not hold the rate ordinance in question void, in the absence of an actual and timely test of its practical operation. *Id.*

The decree dismissing the bill without qualification is so modified as to be expressly without prejudice to the commencement of a new suit, in which complainant may show if it can, as a result of its practical test since May 1, 1915, or upon evidence of values, costs of operation and rates of return upon capital as they stand when such suit is brought and are likely to continue, that the rate in question is confiscatory under the new conditions. P. 268.

The court notices judicially that, principally owing to the war, costs of labor and supplies have advanced greatly since the ordinance was adopted, and largely since the case was last heard in the court below, and that annual returns upon capital and enterprise the world over have materially increased, so that what would have been a proper return for capital in gas plants and other public utilities a few years ago furnishes no safe criterion for the present or the future. *Id.*

Modified and affirmed.

THE case is stated in the opinion.

*Mr. Robert Burns* and *Mr. Edmund C. Strode*, with whom *Mr. Charles A. Frueauff* and *Mr. Dewey C. Bailey, Jr.*, were on the briefs, for appellant.

*Mr. W. M. Morning* and *Mr. C. Petrus Peterson* for appellees.

MR. JUSTICE PITNEY delivered the opinion of the court.

This is an appeal from the final decree of the district court dismissing the bill of complaint in a suit brought by the Lincoln Gas and Electric Light Company, a Nebraska corporation, against the City of Lincoln and

its officials praying for an injunction to restrain enforcement of an ordinance of the city adopted November 19, 1906, which had the effect of reducing complainant's charges for gas from $1.20 to $1 per 1,000 cubic feet, and an ordinance adopted December 10, 1906, assessing an annual occupation tax upon gas companies in the city.

The action was instituted in December, 1906, without previous test of the $1 rate, in the then Circuit Court of the United States for the District of Nebraska. Besides grounds not pressed, the rate ordinance was attacked upon the ground that its enforcement would deprive complainant of its property without due process of law, in contravention of the Fourteenth Amendment. The tax ordinance was attacked upon grounds of state law, and also upon the ground that it was violative of the "due process" and "equal protection" clauses of the Fourteenth Amendment. Upon final hearing the court, by decree entered April 6, 1909, dismissed the bill as to the rate ordinance, without prejudice to the commencement of a new action; but decreed that the ordinance levying an occupation tax violated the constitution of Nebraska and was for this reason illegal, and granted a permanent injunction against its enforcement. 182 Fed. Rep. 926.

Upon appeal by complainant to this court it was found that there was a great mass of conflicting evidence relating to the value of complainant's plant, the cost of operation, and the gross and net income; that the case had not been referred to a master, nor had specific findings of fact been made by the court below, but only general conclusions which were found not to be sufficient in view of errors assigned which opened up substantially the entire case. For this reason the decree was reversed and the cause remanded to the district court with directions to refer it to a master with leave to both parties to take additional evidence. A temporary injunction

which had been granted in the court below and continued in force until final decree and afterwards pending the appeal, under a bond conditioned to account for overcharges if the rate ordinance should be sustained, was by the decree of reversal continued in force until final decree in the court below, upon condition that a new bond with sureties were given to account for overcharges to consumers since the original restraining order, in the event the ordinance should be sustained. 223 U. S. 349.

Upon the going down of the mandate, the district court referred the case (July, 1912) to a master, to take the proofs and report his findings of fact and of law. After a full hearing he made an elaborate report (September, 1914) to which complainant filed about 125 exceptions, with a motion to recommit the case to the master for additional findings, which motion was denied. The master found the rate ordinance was not confiscatory, and (differing from the former decision of the circuit court) held that the occupation tax ordinance was valid, and included the tax as an operating expense. Upon the hearing of the exceptions the report of the master was confirmed by the district court, and the bill dismissed as to the rate ordinance, by decree entered September 23, 1915; the judge filing a memorandum to the effect that he did not agree with the master as to the validity of the occupation tax ordinance, but deemed it unnecessary to pass upon this in the decree, since the result reached by the master would only be strengthened by adjudging the tax invalid, while if the judge should agree with the master upon that question he still would confirm the report. In other words, assuming the occupation tax ordinance to be valid, the addition of this tax to the annual outgoes of complainant would still leave the $1 rate compensatory.

Complainant brings the case to this court by appeal, with about 120 assignments of error, one of which is that

the district court erred in not decreeing that the occupation tax ordinance was in violation of the Fourteenth Amendment in that it amounted to a denial of the equal protection of the laws.

Pending the hearing upon the master's report, and on or about May 1, 1915, complainant, notwithstanding the injunction *pendente lite*, put into effect a net rate of $1 per thousand feet for gas, and has maintained it since.

Upon the strength of this test, and before the argument of this the second appeal, complainant presented to us a petition for leave to file a bill of review in the court below upon the ground that, according to the master's findings, complainant, in the year 1907, earned so small a return that the rate ordinance would have been confiscatory upon the valuation as found by him, but for this additional finding: "All human experience has shown that increased consumption follows quickly a reduction in the price of commodities, and the evidence in this case satisfactorily shows that gas is no exception to the rule."

The petition averred that the experience of complainant in an actual test of the reduced rate during a considerable period since May 1, 1915, showed that the view of the master was erroneous, and in fact under actual operating conditions there was no increase of consumption.

The application for leave to file a bill of review will be denied, for the following reasons:

First, because the $1 rate was put into effect pursuant to a written stipulation made between the parties in the cause to the effect that the action of the company in so doing should not be construed as an acceptance of or compliance with the ordinance in controversy, and should not be "shown in evidence or presented to the court in the above entitled cause, or used in any way by either party to influence the action of the court in the disposition of the case." Hence defendant was not called upon

to observe the effect of the reduced rate, or prepare to meet inferences drawn therefrom.

Secondly, because complainant might have made a practical test of the ordinance rate before bringing this suit for an injunction, and certainly ought to have resorted to the test long before it did so. As early as the month of January, 1909, this court, in two notable rate cases, indicated its view of the importance, in any but a very clear case, of subjecting prescribed rates to the test of practical experience before attacking them in the courts. *Knoxville* v. *Knoxville Water Co.*, 212 U. S. 1, 16, 18; *Willcox* v. *Consolidated Gas Co.*, 212 U. S. 19, 54. When those decisions were announced this case was pending in the circuit court, and shortly thereafter it was decided adversely to complainant upon the question of the validity of the rate, the *Knoxville* and *Willcox Cases* being cited. 182 Fed. Rep. 926, 929. Then, if not before, complainant might have made a practical test of the sufficiency of the rate, instead of waiting six years longer before doing so. The litigation has been extremely tedious and burdensome to both sides, and it ought now to be brought to a conclusion upon the record as it stands.

And thirdly, the argument based upon the master's finding as to the return that complainant would have earned in the year 1907 under the prescribed rates is vitiated by the fact that he included as an operating expense $4,466, the amount of the estimated occupation tax, which was not paid and (as we shall see) has been conclusively adjudged in this suit to be unenforceable. Eliminating this would increase the net return for the year approximately one per cent. upon the investment.

Coming to the merits, we will deal first with the occupation tax ordinance. This is important not only because considerable sums of unpaid taxes have accumulated pending the litigation, but because of the effect of the tax, if sustained, upon the question of the adequacy of the rate.

The ordinance imposes an occupation tax upon all gas companies manufacturing and furnishing gas to the inhabitants of the City of Lincoln, equivalent to 2½ per cent. of their gross receipts derived from that business. It was attacked in the bill as being "partial, discriminatory, unreasonable and oppressive in this: It imposes upon your orator an onerous tax burden to which the business and occupations of other persons within said city are not subjected;" and the bill alleged among other things that the Lincoln Traction Company held a franchise for furnishing electricity to the public in said city, under which it was supplying light, heat, and power in competition with complainant's gas business, and that the city had not subjected this business of the traction company to any occupation tax; wherefore the ordinance "operates to deprive your orator of the equal protection of the laws, imposes a discriminatory burden upon your orator, . . . and deprives your orator of its franchise rights and privileges and of its properties without due process of law," thus being violative of the due process and equal protection provisions of the Fourteenth Amendment. The circuit court deemed that this raised the question of the invalidity of the ordinance under the uniformity provision of the state constitution, and held it was invalid as being in contravention thereof. 182 Fed. Rep. 926, 927, 929. The city requested a modification of the opinion and decree in this respect, on the ground that the invalidity of the ordinance under the state laws and constitution was not charged in the bill. This application was denied.

Neither the city nor any other defendant appealed from that part of the decree which adjudged the occupation tax ordinance void and granted an injunction against its enforcement. Complainant appealed only from that part which was adverse to it upon the question of the validity of the rate ordinance. None of its assignments

of error touched upon the tax ordinance; but in its brief in this court upon the first appeal complainant declared that its bill had assailed the tax ordinance only upon the ground that it was in violation of the equal protection clause of the Fourteenth Amendment; that the bill was drawn upon the theory that this ordinance, like the rate ordinance, could only be assailed in a court of the United States upon the ground "that it was violative of the Constitution of the United States"; apparently overlooking that, even without diversity of citizenship (and there was none), if the bill presented a substantial controversy under the Constitution of the United States, and the requisite amount was involved, the jurisdiction extended to the determination of all questions, including questions of state law, and irrespective of the disposition made of the federal questions. *Greene* v. *Louisville & Interurban R. R. Co.*, 244 U. S. 499, 508. It was said in the brief that the decree of the circuit court against the validity of the occupation tax ordinance was a nullity because the subject-matter was not cognizable in a court of the United States and the issue decided was not tendered by the bill. Upon the ground that the decree might constitute no bar to the collection of the occupation taxes, and the amount of these if collected would reduce complainant's returns and render the rate ordinance if sustained still more burdensome, appellant asked this court to pass upon the validity of the tax ordinance upon the federal grounds asserted in the bill.

Naturally this court ignored the suggestion, its jurisdiction over the question not having been invoked by an appeal, and so it happened that the occupation tax ordinance was not mentioned in the opinion or in the mandate.

There is nothing before us to show what decree, if any, was made by the district court upon the going down of the mandate, beyond a mere order of reference to the

master. The final decree made upon the confirmation of his report says nothing upon the subject of the occupation tax ordinance. Its language is "That the bill of complaint herein, so far as the same relates to the ordinance of the City of Lincoln establishing a rate of charges for gas in said city be, and the same is, hereby dismissed, and the restraining order heretofore granted against the enforcement of said ordinance is hereby dissolved." Upon this record, it is very clear that so much of the decree of the circuit court entered April 6, 1909, as held the occupation tax ordinance void and restrained its enforcement was untouched by the former appeal and unaffected by the subsequent proceedings. The decree now under review does not modify the effect of the former decree upon this subject; hence, the adjudication of the invalidity of the occupation tax ordinance and the award of an injunction to restrain its enforcement are to be taken as a part of the final decree in the cause. We deem it entirely clear, also, that the issue of the validity of that ordinance upon grounds of state law was fairly within the pleadings, and that this part of the decree is impregnable against collateral attack, in this court or elsewhere. This being so, the assignment that the district court erred in its decree of September 23, 1915, in not decreeing that the occupation tax ordinance was in violation of the Fourteenth Amendment because amounting to a denial of the equal protection of the laws, is groundless; there was no occasion for the court to make any decree to that effect, since the matter had been conclusively determined against the validity of this ordinance by the final decree of April 6, 1909, which remained in this respect unappealed from. In order to render the matter free from doubt the decree of September 23, 1915, will now be modified by embodying in it a reiteration of that part of the decree of April 6, 1909, which held the occupation tax ordinance void and restrained its enforcement.

Parenthetically, it may be stated that on March 16, 1908, the city council passed an ordinance imposing a like occupation tax upon corporations selling electricity for light or power purposes, but at the rate of only 2 per cent. of their gross receipts; that on December 13, 1909, both occupation taxes were repealed, and gas and electric companies alike were subjected thereafter to an occupation tax equal to 3 per cent. of their gross receipts; and that in July, 1916, the Supreme Court of Nebraska adjudged the occupation tax ordinance of December 10, 1906, to be invalid, following the decision of the circuit court in this case; and on the same day held that the enforcement against complainant of an occupation tax under the ordinance of December, 1909, must be stayed pending the final determination of the present case. *City of Lincoln* v. *Lincoln Gas & Electric Light Co.*, (two cases), 100 Nebraska, 182, 188.

The attack upon the rate ordinance brings under consideration questions of the valuation of the plant, the proper method of estimating and applying depreciation charges, questions of working capital, going concern value, the propriety of various items of operating expense, the rate of return that reasonably ought to be allowed upon capital invested in a plant and business of this character in Nebraska, and the other questions usual in such cases. The special master conducted a patient and elaborate investigation. An enormous mass of evidence was produced before him, and analyzed in his report. In abridged form, it occupies nearly 2,000 pages of printed transcript in this court, besides numerous tabular exhibits. It would be impossible, within reasonable limits, to recite the substance of the evidence or review the master's findings. We do not feel called upon to do this. *Knoxville* v. *Knoxville Water Co.*, 212 U. S. 1, 17. The findings are subjected to numerous and minute criticisms, and some of these seem to possess

force. We cannot approve the finding that no rate yielding as much as 6 per cent. upon the invested capital could be regarded as confiscatory, in view of the undisputed evidence, accepted by the master, that 8 per cent. was the lowest rate sought and generally obtained as a return upon capital invested in banking, merchandising, and other business in the vicinity; 7 per cent. being the "legal rate" of interest in Nebraska. Complainant had not such a monopoly nor were its profits "virtually guaranteed" in such a sense as to permit the public authorities to restrict it to a return of 6 per cent. upon its invested capital. It is not entirely clear, however, that the rate ordinance did so restrict it. Again, we question the propriety of the master's treatment of "going value," which he seems to have estimated at less than otherwise he would have placed it upon the theory that the company's business had been developed, at the expense of the public, in the expenditure of past earnings exceeding a fair return upon the capital invested, and this without any finding, or any clear evidence to which our attention has been called, that past earnings were excessive. On the other hand, the master erred in favor of complainant by allowing as operating expenses occupation taxes for the years 1907 to 1909, inclusive, these taxes not having been paid and the taxing ordinance applicable to that period having been held invalid by the decree of the circuit court entered April 6, 1909, and so held since his report by the state supreme court. And it is possible he erred in allowing occupation taxes for the year 1910 and subsequent years, since these were not in fact paid. As we have seen, the occupation tax erroneously allowed for the crucial year 1907 amounted to more than 1 per cent. upon the invested capital at the master's valuation. He also appears to have been unduly liberal to the company in the allowance for working capital, and in some other items of valuation, as well as in respect of some

expenditures allowed as operating expense. Without going into details, we content ourselves with announcing our general conclusion that, having regard to the entire period under investigation, we are unable to say that the master erred in holding that the ordinance was not shown to have been confiscatory in its effect. It is probable that in the years 1907 and 1912 the net return was close to the line, if not below it; but that in the other years examined it was at least 7 per cent.; and there are too many doubtful items for us to adjudge the ordinance void, in the absence of an actual and timely test.

The decree dismissed the bill, however, so far as it related to the rate ordinance, without reservation or qualification. Perhaps it would go without saying, but in our opinion the decree ought to be modified so as to permit complainant to make another application to the courts for relief against the operation of the ordinance hereafter, if it can show, as a result of its practical test of the dollar rate since May 1, 1915, or upon evidence respecting values, costs of operation, and the current rates of return upon capital as they stand at the time of bringing suit and are likely to continue thereafter, that the rate ordinance is confiscatory in its effect under the new conditions. It is a matter of common knowledge that, owing principally to the world war, the costs of labor and supplies of every kind have greatly advanced since the ordinance was adopted, and largely since this cause was last heard in the court below. And it is equally well known that annual returns upon capital and enterprise the world over have materially increased, so that what would have been a proper rate of return for capital invested in gas plants and similar public utilities a few years ago furnishes no safe criterion for the present or for the future.

The final decree of September 23, 1915, will be modified by embodying in it a reiteration of that part of the

256. Syllabus.

final decree of April 6, 1909, which held that the ordinance of the City of Lincoln, approved December 10, 1906, levying an occupation tax against complainant, was illegal and void because violative of the constitution of the State of Nebraska, and that the enforcement of the same as to complainant should be perpetually enjoined.

The decree of September 23, 1915, will be further modified so that the dismissal of the bill of complaint, in so far as it relates to the ordinance of the City of Lincoln approved November 19, 1906, establishing a rate of charges for gas in said city, shall be without prejudice to the commencement of a new action to restrain the enforcement of said ordinance hereafter, and

*Decree, as thus modified, affirmed with costs.*
